If  $b \neq 0$ , the equation  $ax + b = c$  is a linear equation in the single variable  $x$  for every value of  $x$ . It has therefore a unique solution for  $x$ , which is given by  $x = \frac{c-b}{a}$ . This defines a function. The graph of this function is a line with slope  $-\frac{1}{a}$  and  $y$ -intercept  $-\frac{b}{a}$ . The functions whose graph is a line are generally called linear functions in the context of calculus.

Garrison's NCLEX Tutoring - YouTube

Elementary algebra encompasses some of the basic concepts of algebra, one of the main branches of mathematics. It is typically taught to secondary school students and builds on their understanding of arithmetic. Whereas arithmetic deals with specified numbers, algebra introduces quantities without fixed values, known as variables. This use of variables entails a use of algebraic notation and an ...

Students apply high school differential calculus and physics to design 2D roller coasters in which the friction force is taken into consideration. Student teams first mathematically design the coaster path (using what they learned in the associated lesson) and then use foam pipe wrap insulation material and marbles to build and test small-size prototype models that match their design dimensions.
