Increasingly interconnected, volatile, and complex, today's organizations cannot be controlled by any conventional approach to management. Indeed, an entirely new definition of what it means to manage is called for. In *The Biology of Business*, John Clippinger and nine outstanding contributors introduce managers to the Complex Adaptive System (CAS) of management, a system that takes into account all of the variables that impact modern enterprises and allows managers to take control from the bottom up. Here, the authors show how McKinsey & Co.,

Capital One, and Optimark have employed CAS to achieve specific business goals and improve overall corporate fitness. And they bridge theory and practice to provide managers with proven tools and techniques they can use to transform their enterprises into self-renewing, self-organizing systems that are maximally responsive to changing market conditions and opportunities.[subhead] Featuring Cutting-Edge Contributions by These Noted ScholarsW. Processes, Systems, and Information: An Introduction to MIS, Global Edition Course Technology

Over the last decade, and even since the bursting of the technology bubble, pundits, consultants, and thought leaders have argued that information technology provides the edge necessary for business success. IT expert Nicholas G. Carr offers a radically different view in this eloquent and explosive book. As IT's power and presence have grown, he argues, its strategic relevance has actually decreased. IT has been transformed from a source of advantage into a commoditized "cost of doing business"--with huge implications for business management. Expanding on Carr's seminal Harvard Business Review article that generated a storm of controversy, *Does IT Matter?*

provides a truly compelling--and unsettling--account of IT's changing business role and its leveling influence on competition. Through astute analysis of historical and contemporary examples, Carr shows that the evolution of IT closely parallels that of earlier technologies such as railroads and electric power. He goes on to lay out a new agenda for IT management, stressing cost control and risk management over innovation and investment. And he examines the broader implications for business strategy and organization as well as for the technology industry. A frame-changing statement on one of the most important business phenomena of our time, *Does IT Matter?* marks a crucial milepost in the debate about IT's future. An acclaimed business writer and thinker, Nicholas G. Carr is a former executive editor of the Harvard Business Review.

This book publishes consolidated information on the soils of Nepal from all possible sources. The Survey Department, Government of Nepal, conducted two national scale soil survey projects to classify soils of Nepal (Land Resource Mapping Project ended in 1985, and National Land Use Planning Project ended in 2021). Both projects adopted the United

States Department of Agriculture system of soil classification. Besides, National Soil Science Research Center (previously known as Soil Science Division) of Nepal Agricultural Research Council and Soil Management Directorate, Department of Agriculture, also worked on soils of Nepal. To date, the information on the soils of Nepal is not published in well-documented form but has been reported widely as gray literature (project report or government report) or peer-review articles. 'The Soils of Nepal' is a part of 'World Soils Book Series' which constitutes twelve chapters—covering broad aspects such as soil research history, climate, geology, soil classification and mapping, and soil fertility. Furthermore, information about soil properties and relation between soil constituents of the dominant soil types of Nepal and their scope of use in the context of land use are described. This book also tries to simplify the intricate relationship among soil, culture, and people. Each chapter contains a comprehensive, richly illustrated, and up-to-date overview of the soils of Nepal. We believe it fulfils a quest for a global audience including students,

educators, extension workers, and soil scientists, who are interested to know the young soils of Nepal.

This book presents contributions on teaching innovation in university architecture and building engineering studies. The authors explain how the construction sector demands that future architects and building engineers have the knowledge and skills that allow them to meet the decarbonization objectives established by international organizations and that this causes the level of knowledge to be higher. The contributors further discuss new technologies and the internationalization of studies presenting new challenges university studies must face. This heterogeneity is represented in the chapters that make up this book developed by researchers from different countries. The book is divided into three blocks: (i) Active learning methodologies; (ii) Innovative methodologies applied to learning process; and (iii) Traditional vs. Advanced Techniques. The chapters of the book represent an advance in the current knowledge of teaching innovation techniques in university architecture and building engineering studies.

The Biology of Business Morgan Kaufmann
Business and Society: Stakeholder Relations, Ethics and Public Policy by Lawrence/Weber/Post, has continued through several successive author teams to be the market-leader in its field. For over thirty years, *Business and Society* has been updated and reinvented in response to society's relationship to business. *Business and Society*, 11e highlights why government regulation is sometimes required as well as new models of business-community collaboration. *Business and Society*, 11e is a book with a point of view. Lawrence, Weber and Post believe that businesses

have social (as well as economic) responsibilities to society; that business and government both have important roles to play in the modern economy; and that ethics and integrity are essential to personal fulfillment and to business success. The book is designed to be easily modularized; an instructor who wishes to focus on a particular portion of the material may select individual chapters or cases to be packaged in a Primis custom product.

Introduce the latest version of the fundamental SQL language used in all relational databases today with Casteel's **ORACLE 12C: SQL, 3E**. Much more than a study guide, this edition helps those who have only a basic knowledge of databases master the latest SQL and Oracle concepts and techniques. Learners gain a strong understanding of how to use Oracle 12c SQL most effectively as they prepare for the first exam in the Oracle Database Administrator or Oracle Developer Certification Exam paths. This edition initially focuses on creating database objects, including tables, constraints, indexes, sequences,

and more. The author then explores data query techniques, such as row filtering, joins, single-row functions, aggregate functions, subqueries, and views, as well as advanced query topics. ORACLE 12C: SQL, 3E introduces the latest features and enhancements in 12c, from enhanced data types and invisible columns to new CROSS and OUTER APPLY methods for joins. To help readers transition to further studies, appendixes introduce SQL tuning, compare Oracle's SQL syntax with other databases, and overview Oracle connection interface tools: SQL Developer and SQL Plus. Readers can trust ORACLE 12C: SQL, 3E to provide the knowledge for Oracle certification testing and the solid foundation for pursuing a career as a successful database administrator or developer.
