American markets, once a model for the world, are giving up on competition. Thomas Philippon blames the unchecked efforts of corporate lobbyists. Instead of earning profits by investing and innovating, powerful firms use political pressure to secure their advantages. The result is less efficient markets, leading to higher prices and lower wages.

William Stanley Jevons and the Cutting Edge of Economics Worth

In a concise and crisp manner, this book presents the state of the art in ecological economics, an interdisciplinary field focused on the analysis of sustainability of global, national and regional economic systems. An elegant guide, the book offers a range of cutting edge methods used in

sustainability research including multicriteria decision aid (MCDA), input-output analysis, and life cycle analysis. This book is packed with references for students with some background in economics, environmental science or mathematics who aim to develop the analytical skills required for redirecting our development path towards sustainability in government, international organisations, academia, non-profit sector and business. As such, the book is primarily aimed at MSc and first year PhD students reading for degrees in Environmental Change and Management, Ecological Economics, Environmental Management, Philosophy, Politics and Economics, and those taking part in similar programmes. The book strives to develop the idea that a significant adjustment of the current economic theories is required, an idea supported by the emerged world economic crisis, the climatic and biodiversity crisis the world is currently facing and the enormously slow progress that has been made in the field of reorientation of the global economy towards sustainability. The practical case studies provided focus on the most pressing topics of today, and the book adopts a positive approach for problem solving and strategic development, which is aimed at educating the future decision makers and business leaders. This Handbook explores and critically examines current research in economics and marketing science on key issues in retailing and distribution. Providing a rich perspective for the discussion of public policy, contributions from several disciplines and continents range from the history of chains and the impact of

multinational retailers on international trade patterns to US merger policy in the retail context, the rise of the Internet, and consumer-to-consumer sales. The chapters address methodological issues such as the structural estimation of entry games between retailers, productivity measurement when both inputs and output are not fully observable, and demand estimation with variable assortment. Policy issues explored include mergers, zoning, and the regulation of buyer power, while other chapters address some of the recent exciting developments in technology, retail formats, and data availability.

The book goes on to study the changes in online retailing and 'big data', and to examine competition in specific retail sectors including gasoline stations, automobile dealerships, supermarkets, and 'big box' retail. This state-of-the-art Handbook is an essential reference for students and academics of economics and marketing science, and offers an outsider's perspective to specialists in operations research, data analytics, geography, and sociology. In this book, leading experts discuss innovative components of complexity theory and chaos theory in economics. The underlying perspective is that investigations of economic phenomena should view these phenomena not as deterministic, predictable and mechanistic but rather as process dependent, organic and always evolving. The aim is to highlight the exciting potential of this approach in economics and its ability to overcome the limitations of past research and offer important new insights. The book offers a stimulating mix of theory, examples and policy. By casting light on a variety of topics in the field, it will provide an ideal platform for researchers wishing to deepen their understanding and identify areas for further investigation.

The impressive young scholar Bert Mosselmans, analyzing the theory and policy of Jevons, a major figure in the field of the history of economics, has put together a volume with broad international appeal, particularly in Europe, North America and Japan, that offers a synthetic approach to Jevons' economic theory, applied economics and economic policy. Adopting a relativist approach to his subject, Mosselmans focuses on all aspects of Jevons' theory, tying the different strands together where appropriate and discriminating where necessary. Examining the relation between theory and practise he situates Jevons within the history of economic thought and in relation to his logic, ethics, religion and aesthetics. Ideal for scholars working in the fields of philosophy and history as well as economics, this ambitious and insightful work offers a comprehensive analysis of one of the founding fathers of modern economic thought, whose work marked a new chapter in its history, bridging the gap

between classical and neo-classical economics.
