This book helps in Achieving food safety success which requires going beyond traditional training, testing, and inspectional

approaches to managing risks. It requires a better understanding of the human dimensions of food safety. In the field of food safety today, much is documented about specific microbes, time/temperature processes, post-process contamination, and HACCP – things often called the hard sciences. There is not much published or discussed related to human behavior – often referred to as the “ soft stuff. ” However, looking at foodborne disease trends over the past few decades and published regulatory out-of-compliance rates of food safety risk factors, it ’ s clear that the soft stuff is still the hard stuff. Despite the fact that thousands of employees have been trained in food safety around the world, millions have been spent globally on food safety research, and countless inspections and tests have been performed at home and abroad, food safety remains a significant public health challenge. Why is that? Because to improve food safety, we must realize that it ’ s more than just food science; it ’ s the behavioral sciences, too. In fact, simply put, food safety equals behavior. This is the fundamental principle of this book. If you are trying to improve the food safety performance of a retail or food service

establishment, an organization with thousands of employees, or a local community, what you are really trying to do is change people's behavior. The ability to influence human behavior is well documented in the behavioral and social sciences. However, significant contributions to the scientific literature in the field of food safety are noticeably absent. This book will help advance the science by being the first significant collection of 50 proven behavioral science techniques, and be the first to show how these techniques can be applied to enhance employee compliance with desired food safety behaviors and make food safety the social norm in any organization. “ A magnificent gift to those of us who love someone who has a mental illness... Earley has used his considerable skills to meticulously research why the mental health system is so profoundly broken. ” —Bebe Moore Campbell, author of 72 Hour Hold  
Former Washington Post reporter Pete Earley had written extensively about the criminal justice system. But it was only when his own son—in the throes of a manic episode—broke into a neighbor's house that he learned what happens to mentally ill people who

break a law. This is the Earley family's compelling story, a troubling look at bureaucratic apathy and the countless thousands who suffer confinement instead of care, brutal conditions instead of treatment, in the “ revolving doors ” between hospital and jail. With mass deinstitutionalization, large numbers of state mental patients are homeless or in jail—an experience little better than the horrors of a century ago. Earley takes us directly into that experience—and into that of a father and award-winning journalist trying to fight for a better way.

Currently, there is no one book or textbook that covers all aspects of retail food safety. It is becoming apparent that a number of issues relating to retail food safety have come to the forefront in some jurisdictions of late. For example, a recent USDA risk assessment has pointed out that issues occurring at USA retail appear to be critical in terms of contamination of deli-meat. As well, a large listeriosis outbreak in Quebec pointed to retail cross-contamination as a key issue. In terms of sanitation, a number of advances have been made, but these have not all been synthesized together in one chapter, with a focus on retail. In addition, the whole area of

private standards and the Global Food Safety Initiative (GFSI) have come to the forefront of late and these as well will be explored in great detail. Other aspects related to the safety of important food commodities such as seafood, meat, produce and dairy will also be discussed and salient areas addressed.
