After you remove the coil (black/ round thing), feel the stem for any dents or bulging. After you remove the valve, make sure the stem inside moves in and out freely. There should be about .090" of travel on a good valve. I do agree that swapping controllers is the quickest way to start. Also, be aware of any ice that could of formed in the valves.

the way the mounts work is that there is a fluid chamber with a plastic body in the middle of it, with small channel cut through it. this allows fluid from the top chamber, through the plastic body, to the bottom chamber. the bottom chamber is rubber lined and can deform under pressure. there is also an airway vented to atmosphere, with a rubber membrane separating the fluid from the atmosphere. a solenoid valve, controlled by the motronic, can open or close the airway.
