How does a city obtain water, gas, and electricity? Where do these services come from? How are they transported? The answer is infrastructure, or the inner, and sometimes invisible, workings of the city. Roads, railroads, bridges, telephone wires, and power lines are visible elements of the infrastructure; sewers, plumbing pipes, wires, tunnels, cables, and sometimes rails are usually buried underground or hidden behind walls. *Engineering the City* tells the fascinating story of infrastructure as it developed through history along with the growth of cities. Experiments, games, and construction diagrams show how these structures are built, how they work, and how they affect the environment of the city and the land outside it.

Dr. Peter Brown is an intern at Manhattan's worst hospital, with a talent for medicine, a shift from hell, and a past he'd prefer to keep hidden. Whether it's a blocked circumflex artery or a plan to land a massive malpractice suit, he knows what evil lurks in the hearts of men. Pietro "Bearclaw" Brwna is a hitman for the mob,

with a genius for violence, a well-earned fear of sharks, and an overly close relationship with the Federal Witness Relocation Program. More likely to leave a trail of dead gangsters than a molecule of evidence, he's the last person you want to see in your hospital room. Nicholas LoBrutto, aka Eddy Squillante, is Dr. Brown's new patient, with three months to live and a very strange idea: that Peter Brown and Pietro Brwna might-just might-be the same person . . . Now, with the mob, the government, and death itself descending on the hospital, Peter has to buy time and do whatever it takes to keep his patients, himself, and his last shot at redemption alive. To get through the next eight hours-and somehow beat the reaper. Spattered in adrenaline-fueled action and bone-saw-sharp dialogue, *Beat the Reaper* is a debut thriller so utterly original you won't be able to guess what happens next, and so shockingly entertaining you won't be able to put it down.
