Endorsed by authors, teachers, and congressman alike, Mike Mongo's Astronaut Instruction Manual excites a new generation of space explorers. The book, designed for children between the ages of 6 and 13, is a functioning, interactive instruction manual. Using mad-lib-style fill-in-the-blanks, Mongo encourages his readers to articulate and illustrate their own vision of next-generation space travel. The Astronaut Instruction Manual captures a new era of enthusiasm for space exploration, driven in part by new space celebrities (Commander Chris Hadfield, Elon Musk), and in part by a shift in popular interest in space (SpaceX rockets, The Mars Colonial Transporter, Kerbal).

A groundbreaking examination of the implications of synthetic biology for biodiversity conservation Nature almost everywhere survives on human terms. The distinction between what is natural and what is human-made, which has informed conservation for centuries, has become blurred. When scientists can reshape genes more or less at will, what does it mean to

conserve nature? The tools of synthetic biology are changing the way we answer that question. Gene editing technology is already transforming the agriculture and biotechnology industries. What happens if synthetic biology is also used in conservation to control invasive species, fight wildlife disease, or even bring extinct species back from the dead? Conservation scientist Kent Redford and geographer Bill Adams turn to synthetic biology, ecological restoration, political ecology, and de-extinction studies and propose a thoroughly innovative vision for protecting nature.

This volume situates toys and design culture for children within broader narratives on history, art, design and the decorative arts, where toy design has traditionally been viewed as an aberration from

more serious pursuits. The essays included treat toys not merely as unproblematic reflections of socio-cultural constructions of childhood but consider how design culture actively shaped, commodified and materialized shifting discursive constellations surrounding childhood and children. Focusing on the new array of material objects designed in response to the modern 'invention' of childhood - what we might refer to as objects for a childhood by design - *Childhood by Design* explores dynamic tensions between theory and practice, discursive constructions and lived experience as embodied in the material culture of childhood. Contributions from and between a variety of disciplinary perspectives (including history, art history, material cultural studies, decorative arts, design history, and childhood studies) are represented -

critically linking historical discourses of childhood with close study of material objects and design culture. Chronologically, the volume spans the 18th century, which witnessed the invention of the toy as an educational plaything and a proliferation of new material artifacts designed expressly for children's use; through the 19th-century expansion of factory-based methods of toy production facilitating accuracy in miniaturization and a new vocabulary of design objects coinciding with the recognition of childhood innocence and physical separation within the household; towards the intersection of early 20th-century child-centered pedagogy and modernist approaches to nursery and furniture design; through the changing consumption and sales practices of the postwar period marketing directly to children through television, film and other

digital media; and into the present, where the line between the material culture of childhood and adulthood is increasingly blurred.

The sociology of childhood and youth has sparked international interest in recent years, and yet a reader highlighting Canadian work in this field has been long overdue. Filling this gap in the literature, *The Sociology of Childhood and Youth in Canada* brings together cutting-edge Canadian scholarship in this important

---

and growing discipline. Thought-provoking and timely, this edited collection explores a breadth of essential topics, including research on and with children and youth, the social construction of childhood and youth, intersecting identities, and citizenship, rights, and social engagement. With a focus on social justice, the contributing authors critically examine various sites of inequality in the lives of children and young people, such as gender, sexuality, colonialism, race, class, and disability. Encouraging further development of Canadian scholarship in the sociology of childhood and youth, this unique collection ensures that young people's voices are heard by involving them in the research process. Pedagogical supports—including learning objectives, study questions, suggested research assignments, and a comprehensive glossary—make this volume an

invaluable resource for students of childhood and youth studies in Canada. *The Official Stormtrooper Training Manual* Scholastic Incorporated  
Since the "Automatic Binding Bricks" that LEGO produced in 1949, and the LEGO "System of Play" that began with the release of Town Plan No. 1 (1955), LEGO bricks have gone on to become a global phenomenon, and the favorite building toy of children, as well as many an AFOL (Adult Fan of LEGO). LEGO has also become a medium into which a wide number of media franchises, including Star Wars, Harry Potter, Pirates of the Caribbean, Batman, Superman, Lord of the Rings, and others, have adapted their characters, vehicles, props, and settings. The LEGO Group itself has become a multimedia empire, including

LEGO books, movies, television shows, video games, board games, comic books, theme parks, magazines, and even MMORPGs. *LEGO Studies: Examining the Building Blocks of a Transmedial Phenomenon* is the first collection to examine LEGO as both a medium into which other franchises can be adapted and a transmedial franchise of its own. Although each essay looks at a particular aspect of the LEGO phenomenon, topics such as adaptation, representation, paratexts, franchises, and interactivity intersect throughout these essays, proposing that the study of LEGO as a medium and a media empire is a rich vein barely touched upon in Media Studies. *Star Wars: Rebel Starfighters* John Wiley & Sons

An essential guide to tackling what students, families, and educators can do now to cut through stress and performance pressure, and find a path to purpose. Today's college-bound kids are stressed, anxious, and navigating demands in their lives unimaginable to a previous generation. They're performance machines, hitting the benchmarks they're "supposed" to in order to reach the next tier of a relentless ladder. Then, their mental and physical exhaustion carries over right into first jobs. What have traditionally been considered the best years of life have become the beaten-down years of life. Belle Liang and Timothy Klein devote their careers both to counseling individual students and to

cutting through the daily pressures to show a better way, a framework, and set of questions to find kids' "true north": what really turns them on in life, and how to harness the core qualities that reveal, allowing them to choose a course of study, a college, and a career. Even the gentlest parents and teachers tend to play into pervasive societal pressure for students to PERFORM. And when we take the foot off the gas, we beg the kids to just figure out what their PASSION is. Neither is a recipe for mental or physical health, or, ironically, for performance or passion. How to Navigate Life shows that successful human beings instead tap into their PURPOSE—the why behind the what and how. Best of all, purpose is a completely translatable quality to every

---

aspect of life, from first jobs to last jobs and everything in between.

The skills in shortest supply for the future workplace are not technical, but behavioural - creativity, problem-solving and critical thinking. *Raising Thinkers* begins with an exploration of this skills gap in developed countries across the East and West from a national, corporate and educational perspective. In Asia there is growing unhappiness with a school system that is too narrowly focused on rote learning and teaching to test. In the West there is much debate about the efficacy of school systems that either cater largely to the lowest levels of ability or that too blindly strive to top global education rankings. *Raising Thinkers* provides insight into the future that today's children will inhabit as adults and what public school systems are currently serving up. It covers the mechanics of high-level, critical

and creative thinking, problem solving and decision making and proposes a curiosity-based approach to problems that should be taught right from school-going years. School reform will always lag behind the ever evolving needs of the corporate world. For current scholars and parents, change will come too late - therefore *Raising Thinkers* is also a guide aimed at helping parents and caregivers bridge the skills gap in fun, useful and practical ways.
