This book creates a new framework for the political and intellectual relations between the British Isles and America in a momentous period which witnessed the formation of modern states on both sides of the Atlantic and the extinction of an Anglican, aristocratic and monarchical order. Jonathan Clark integrates evidence from law and religion to reveal how the dynamics of early modern societies were essentially denominational. In a study of British and American discourse, he shows how rival conceptions of liberty were expressed in the conflicts created by Protestant dissent's hostility to an Anglican hegemony. The book argues that this model provides a key to collective acts of resistance to the established order throughout the period. The book's final section focuses on the defining episode for British and American history, and shows the way in which the American Revolution can be understood as a war of religion.

This is the first comprehensive study of what remains of the writings of Aristotle's student Eudemus of Rhodes on the history of the exact sciences. These fragments are crucial to our understanding of the content, form, and goal of the Peripatetic historiography of science. The first part of the book presents an analysis of those trends in Presocratic, Sophistic and Platonic thought that contributed to the development of the history of science. The second part provides a detailed study of Eudemus' writings in their relationship with the scientific literature of his time, Aristotelian philosophy and the other historiographic genres practiced at the Lyceum: biography, medical and natural-philosophical doxography. Although Peripatetic historiography of science failed in establishing itself as a continuous genre, it greatly contributed both to the birth of the Arabic medieval historiography of science and to the development of this genre in Europe in the 16th-18th centuries.

This book is a comprehensive account of the Church of England, Anglicanism and religious life in England during the Restoration period that shaped all three. While much has been written about the Church of England in the century before the Civil War, this history focuses on Anglicanism in the second half of the 17th century, a period when it began to establish a distinct identity, to recognize and explain how it differed from both the Church of Rome and the Protestant Reformed churches of Europe.

"Much research has been conducted to provide researchers and hearing healthcare professionals with updated information in regard to hearing assessments, results interpretation and case management. This ongoing research is particularly imperative to guide clinicians with optimized methods in assessing and managing pediatric patients with hearing impairment and disability. As such, tremendous research efforts have been made in determining the most optimum methods in assessing hearing using both subjective and objective tests. Since hearing loss can occur due to disrupted peripheral and/or central auditory pathway, there is also a growing interest to study children with auditory processing disorder (APD). Even though notable achievements have been observed in understanding APD, more research is required, particularly in establishing a gold standard APD test and its specific interventions. Additionally, having an objective test such as speech-evoked auditory brainstem response is beneficial to understand how speech sounds are encoded within the brainstem region in hearing-impaired children, as well as in those with compromised neural function. In this book, we have gathered research from Malaysia and India in this field and hope it will be of interest to our readers"--

Hardbound. Clams have been harvested along the coasts of North America for as long as records have been kept. They support commercial, sport and subsistence fisheries although unfortunately, with few exceptions, the harvest of these invertebrates is declining. This decline is probably caused by a number of factors including pollution and overfishing. In an effort to ameliorate this situation, interest in the aquaculture of these species has grown. Intensive semi-controlled clam culture has been attempted in North America for almost three decades. However, it was not until the last decade

that a number of entrepreneurs actually began clam farming and developing successful and profitable operations. This success has been possible because of numerous scientific and practical contributions made by a great number of scientists, growers, and clambers over the years, and by a healthy market demand caused by a downward trend in the wild harvest. Many of the

The emerging paradigm of evidence-based health care rests on the judicious integration of the patient needs/wants, the provider's expertise, and the best available research evidence in the treatment plan. The purpose of this book is to discuss the promise and the limitations of incorporating the best available evidence in clinical practice. It seeks to characterize and define how best available research evidence can be used in clinical practice and to what respect it applies to current public health issues.

An engaging and incisive investigation into the shadowy world of secret statecraft and covert action, by a leading expert on the topic. Today's world is in flux.

Competition between the great powers is back on the agenda and governments around the world are turning to secret statecraft and the hidden hand to navigate these uncertain waters. From poisonings to electoral interference, subversion to cyber sabotage, states increasingly operate in the shadows, while social media has created new avenues for disinformation on a mass scale. This is covert action: perhaps the most sensitive - and controversial - of all state activity. However, for all its supposed secrecy, it has become surprisingly prominent - and it is something that has the power to affect all of us. In an enthralling and urgent narrative packed with real-world examples, Rory Cormac reveals how such activity is shaping the world and argues that understanding why and how states wield these dark arts has never been more important.

First published in 1895, this book recounts the author's 1893 expedition to the Tafilet oasis in Morocco, one of the largest oases in the world. Previously largely inaccessible (before the invention of the motor car it was at least 10 days' journey south of Fez across the Atlas mountains and the Sahara), Harris took advantage of the Sultan of Morocco Mulai el Hassen's decision to pay a visit to the oasis during the autumn of that year. Throughout the book the author describes in great detail the places he visited and the people he met along the way. There are detailed descriptions of Marrakesh and the villages of the Atlas Mountains, as well as ruminations on the differences between the Arabs and the Berber tribes, and the situation of the Jews. Crossing the desert, Harris reached the Sultan's camp at the edge of the oasis, and there follows a detailed description of the activities of the Sultan and his retinue, their dealings with the troublesome tribes of the area, and accounts of the history, geography and people of Tafilet. The book concludes with the author's return journey to the north, and an account of the events following the Sultan's own return from the oasis and his subsequent death. Painting as it does a vivid picture of the state of Morocco at the very end of the 19th century, Walter B. Harris's Tafilet is sure to be of great interest to all those fascinated by the history of this unique and diverse North African country.
