People often believe that we can overcome the profound environmental and climate crises we face by smart systems, green innovations and more recycling. However, the quest for complex technological solutions, which rely on increasingly exotic and scarce materials, makes this unlikely. A best-seller in France, this English language edition introduces readers to an alternative perspective on how we should be marshalling our resources to preserve the planet and secure our future. Bihoux skilfully goes against the grain to argue that 'high' technology will not solve global problems and envisages a different approach to build a more resilient and sustainable society.

The Race for Perfect: Inside the Quest to Design the Ultimate Portable Computer John Wiley & Sons

Personal computing has reshaped economies and industries, and is transforming how we express ourselves and relate to one another. The most personal of personal computers are the portables. We carry these gadgets with us wherever we go, whether they're laptops, smartphones, or the coolest new Web-surfing devices. The Race for Perfect tells the story of two generations of entrepreneurs, designers, and engineers as they have struggled to make ever-better portables. Steve Hamm takes the reader into a world where inspiration, design, engineering, and marketing come together to produce wave upon wave of the innovative products that we love to talk about and use. From the earliest days of portable computing, 40 years ago, entrepreneurs and designers have pushed forward relentlessly in a quest to create the perfect device. Their efforts have produced a few fabulous successes and many failures. But they never give up. They're driven by the basic rule of the tech industry: innovate or die. In addition to a fascinating read, The Race for Perfect offers valuable lessons for business people in any industry, revealing how they must INNOVATE constantly to differentiate their products CREATE design principles that are timeless INTEGRATE design and engineering so

products are both useful and fun to use IMPROVE quality and convenience without compromise TAP social networks to turn customers into fans At the center of this tale is the story of a single product, Lenovo's ThinkPad X300 laptop. Lenovo, the first Chinese company to seek to establish a global consumer brand, bought IBM's PC division in 2005 primarily to get the company's storied ThinkPad laptops. The X300 was conceived as a "halo" product that would draw customers to Lenovo's entire line. Woven through The Race for Perfect is a case study of how this ambitious company, with teams in Japan, the United States, and China, marshaled its resources to pursue laptop perfection. As X300 came close to the finish line, it collided head-on with Apple's super-slim MacBook Air—with surprising results. *ThinkPad Apress*

You've done all the right things to lose weight and balance your blood sugar. You've counted calories, exercised, and switched to a low-glycemic diet—all with no long-term success. In *Belly Fat Effect*, Mike Mutzel provides the missing links that are standing between you and weight control and blood sugar management. New research has proved that the 'calories in-calories out' path to weight loss is obsolete. It just doesn't work for good reason: Eating fewer calories and exercising more doesn't account for the waist-busting influence of

inflammatory foods, gut bacteria, and other metabolic influences. *Belly Fat Effect* translates the new science into useable information that will give you a winning edge over your excess pounds and roller-coaster blood sugar levels. Learn now how to burn fat, not store it.

technology. Neuroscience in Africa This work addresses stealthy peripheral-based attacks on host computers and presents a new approach to detecting them. Peripherals can be regarded as separate systems that have a dedicated processor and dedicated runtime memory to handle their tasks. The book addresses the problem that peripherals generally communicate with the host via the host's main memory, storing cryptographic keys, passwords, opened files and other sensitive data in the process – an aspect attackers are quick to exploit. Here, stealthy malicious software based on isolated micro-controllers is implemented to conduct an attack analysis, the results of which provide the basis for developing a novel runtime detector. The detector reveals stealthy peripheral-based attacks on the host's main memory by exploiting certain hardware properties, while a permanent and resource-efficient

measurement strategy ensures that the detector is also capable of detecting transient attacks, which can otherwise succeed when the applied strategy only measures intermittently. Attackers exploit this strategy by attacking the system in between two measurements and erasing all traces of the attack before the system is measured again.

Abnormalities. We live in a world where it has become customary to attach a label to people who deviate from the norm. Since the American DSM, the Diagnostic and Statistical Manual of Mental Disorders, is also used in the Netherlands, Dutch adults and children who differ from the majority are labelled and classified as patients suffering from ADHD, PDD-NOS, Asperger's, Borderline or Autism/ASD. Exquisite Errors is about deviating from the norm and the beauty this entails. Barry van der Rijt, visual artist and diagnosed with ADHD, believes that an abnormal brain can lead to something very beautiful. During a period of two years he obsessively collected hundreds of abnormalities in his chosen artistic field of digital film. Inspired by the DSM he created, based on these codec errors, his own classification of disorders, by defining, categorizing and labelling them. However, always avoiding negative labels. Because is it wrong to deviate from the norm?

I Loved a Rogue Springer This Research Topic covers some of the latest research on brain and behavior in health and disease in Africa. With its untapped resources and unique situations, "Neuroscience in Africa" has the potential to contribute to a better understanding of human brain function both in health and disease. The diverse African fauna display a range of specializations in brain structure/function relationships as a result of adaptations to the environment. Exploration of these may lead to insights into coping strategies which could be extrapolated to humans. Africa's unique flora is being investigated for anti-inflammatory, antinociceptive, antioxidant, antiepileptogenic and neuroprotective properties to determine its potential for use in the treatment of human brain disorders. There is also research on neurodegenerative and infectious diseases, not only common to the global world, but also neglected tropical diseases and conditions which provide unique avenues of investigations in basic and translational neuroscience on highly debilitating disorders - and on the effects of pathogens and environmental toxins.
