In sharply argued, fast-moving chapters, Cory Doctorow ' s *Information Doesn ' t Want to Be Free* takes on the state of copyright and creative success in the digital age. Can small artists still thrive in the Internet era? Can giant record labels avoid alienating their audiences? This is a book about the pitfalls and the opportunities that creative industries (and individuals) are confronting today — about how the old models have failed or found new footing, and about what might soon replace them. An essential read for anyone with a stake in the future of the arts, *Information Doesn ' t Want to Be Free* offers a vivid guide to the ways creativity and the Internet interact today, and to what might be coming next. This book is DRM-free.

In the third in Katharine Ashe's *Prince Catchers* series, the eldest of three very different sisters must fulfill a prophecy to discover their birthright. But if Eleanor is destined to marry a prince, why can't she resist the scoundrel who seduced her? She can pour tea, manage a household, and sew a modest gown. In short, Eleanor Caulfield is the perfect vicar's daughter. Yet there

was a time when she'd risked everything for a black-eyed gypsy who left her brokenhearted. Now he stands before her—dark, virile, and ready to escort her on a journey to find the truth about her heritage. Leaving eleven years ago should have given Taliesin freedom. Instead he's returned to Eleanor, determined to have her all to himself, tempting her with kisses and promising her a passion she's so long denied herself. But if he was infatuated before, he's utterly unprepared for what will happen when Eleanor decides to abandon convention—and truly live . . .

Abnormalities. We live in a world where it has become customary to attach a label to people who deviate from the norm. Since the American DSM, the Diagnostic and Statistical Manual of Mental Disorders, is also used in the Netherlands, Dutch adults and children who differ from the majority are labelled and classified as patients suffering from ADHD, PDD-NOS, Asperger's, Borderline or Autism/ASD. *Exquisite Errors* is about deviating from the norm and the beauty this entails. Barry van der Rijt, visual artist and diagnosed with ADHD, believes that an abnormal brain can lead to something very beautiful. During a period of two years he obsessively collected hundreds of abnormalities in his chosen artistic field of digital film. Inspired by the DSM he created, based on these codec errors, his own classification of disorders,

by defining, categorizing and labelling them. However, always avoiding negative labels. Because is it wrong to deviate from the norm?

This work addresses stealthy peripheral-based attacks on host computers and presents a new approach to detecting them. Peripherals can be regarded as separate systems that have a dedicated processor and dedicated runtime memory to handle their tasks. The book addresses the problem that

peripherals generally communicate with the host via the host's main memory, storing cryptographic keys, passwords, opened files and other sensitive data in the process — an aspect attackers are quick to exploit. Here, stealthy malicious software based on isolated micro-controllers is implemented to conduct an attack analysis, the results of which provide the basis for developing a novel runtime detector. The detector reveals stealthy peripheral-based attacks on the host's main memory by exploiting certain hardware properties, while a permanent and resource-efficient measurement strategy ensures that the detector is also capable of detecting transient attacks, which can otherwise succeed when the applied strategy only measures intermittently. Attackers exploit this strategy by attacking the system in between two measurements and erasing all traces of the attack before the system is measured again.

“From Paper to Pixels” is a guide for musicians making the transition from paper sheet music to digital sheet music readers and apps. From selecting the perfect tablet or computer to finding the right apps and tools for reading and writing music, exploring online sheet music resources and — most importantly — how to get music into your tablet or computer of choice, this comprehensive guide is written in a fun, breezy style, designed to soothe the fears of even the most techno-phobic musician.

“From Paper to Pixels” will show you:

- 10 Reasons Why Pixels Are Better Than Paper
- The Four C's Of Putting Together The Perfect Digital Sheet Music Reader
- How To Put Sheet Music Into Your Tablet Or Computer
- Cool Things You Never Knew You Could Do With Digital Sheet Music And much, much more!

“From Paper to Pixels” was written for every kind of musician reading all types of music, from traditional music notation to lyric sheets, chord charts, and tablature. No matter what style or musical background you come from, you'll find this book to be an invaluable resource. “From Paper to Pixels” was written by Hugh Sung, a professional classical “paperless pianist” who is a pioneer of digital sheet music and a teacher who loves to empower learners. After performing around the world, recording multiple albums, and serving on the faculty of the venerable Curtis Institute of Music in Philadelphia for 19 years, Hugh combined his passion for music and technology and co-founded AirTurn, a company that develops technologies for musicians (www.airturn.com). [Data Mining: Concepts and Techniques](#) provides the concepts and techniques in processing gathered data or information, which will be used in various applications. Specifically, it explains data mining and the tools used in discovering knowledge from the collected data. This book is referred as the knowledge discovery from data (KDD). It focuses on the feasibility, usefulness, effectiveness, and scalability of techniques of large data sets. After describing data mining, this edition explains the methods of knowing, preprocessing, processing, and warehousing data. It then presents information about data warehouses, online analytical processing (OLAP), and data cube technology. Then, the methods involved in mining frequent patterns, associations, and correlations for large data sets are described. The book details the methods for data classification and introduces the concepts and methods for data clustering. The remaining chapters discuss the outlier detection and the trends, applications, and research frontiers in data mining. This book is intended for Computer Science students, application developers, business professionals, and researchers who seek information on data mining. Presents dozens of algorithms and implementation examples, all in pseudo-code and suitable for use in real-world, large-scale data mining projects. Addresses advanced topics such as mining object-relational databases, spatial databases, multimedia databases, time-series databases, text databases, the World Wide Web, and applications in several fields. Provides a comprehensive, practical look at the concepts and techniques you need to get the most out of your data.

It is not until you stop and count up McLaren's victories since it's inception in 1964, that you truly appreciate the breadth, depth and footprint of this amazing marque in motorsport. No other racing team can lay claim to successes across such a vast spectrum: McLaren has been victorious in Formula 1, Formula 2, Formula 3, Formula A/5000, Indycars, Can-Am and Interserie sportscars as well as at the Le Mans 24-hour race. This 320-page, large-format,

hard-back landmark book does what no other book has sought to achieve, painstakingly recording all of McLaren's contemporary victories from 1964 until 2011. Produced with the full co-operation and endorsement of the McLaren Group, [McLaren The Wins](#) is beautifully laid out, with period photography and race results depicting each and every one of the 636 wins, up to and including the 2011 Chinese GP. This superb 320-page book spans six momentous decades from 1964 to the present day.

[Platform Embedded Security Technology Revealed](#) is an in-depth introduction to Intel's platform embedded solution: the security and management engine. The engine is shipped inside most Intel platforms for servers, personal computers, tablets, and smartphones. The engine realizes advanced security and management functionalities and protects applications' secrets and users' privacy in a secure, lightweight, and inexpensive way. Besides native built-in features, it allows third-party software vendors to develop applications that take advantage of the security infrastructures offered by the engine. Intel's security and management engine is technologically unique and significant, but is largely unknown to many members of the tech communities who could potentially benefit from it. [Platform Embedded Security Technology Revealed](#) reveals technical details of the engine.

The engine provides a new way for the computer security industry to resolve critical problems resulting from booming mobile technologies, such as increasing threats against confidentiality and privacy. This book describes how this advanced level of protection is made possible by the engine, how it can improve users' security experience, and how third-party vendors can make use of it. It's written for computer security professionals and researchers; embedded system engineers; and software engineers and vendors who are interested in developing new security applications on top of Intel's security and management engine. It's also written for advanced users who are interested in understanding how the security features of Intel's platforms work.

Personal computing has reshaped economies and industries, and is transforming how we express ourselves and relate to one another. The most personal of personal computers are the portables.

We carry these gadgets with us wherever we go, whether they're laptops, smartphones, or the coolest new Web-surfing devices. [The Race for Perfect](#) tells the story of two generations of entrepreneurs, designers, and engineers as they have struggled to make ever-better portables. Steve Hamm takes the reader into a world where inspiration, design, engineering, and marketing come together to produce wave upon wave of the innovative products that we love to talk about and use. From the earliest days of portable computing, 40 years ago,

entrepreneurs and designers have pushed forward relentlessly in a quest to create the perfect device. Their efforts have produced a few fabulous successes and many failures. But they never give up. They're driven by the basic rule of the tech industry: innovate or die. In addition to a fascinating read, *The Race for Perfect* offers valuable lessons for business people in any industry, revealing how they must INNOVATE constantly to differentiate their products CREATE design principles that are timeless INTEGRATE design and engineering so products are both useful and fun to use IMPROVE quality and convenience without compromise TAP social networks to turn customers into fans At the center of this tale is the story of a single product, Lenovo's ThinkPad X300 laptop. Lenovo, the first Chinese company to seek to establish a global consumer brand, bought IBM's PC division in 2005 primarily to get the company's storied ThinkPad laptops. The X300 was conceived as a "halo" product that would draw customers to Lenovo's entire line. Woven through *The Race for Perfect* is a case study of how this ambitious company, with teams in Japan, the United States, and China, marshaled its resources to pursue laptop perfection. As X300 came close to the finish line, it collided head-on with Apple's super-slim MacBook Air—with surprising results.

This collective work identifies the latest developments in the field of the automatic processing and analysis of digital color images. For researchers and students, it represents a critical state of the art on the scientific issues raised by the various steps constituting the chain of color image processing. It covers a wide range of topics related to computational color imaging, including color filtering and segmentation, color texture characterization, color invariant for object recognition, color and motion analysis, as well as color image and video indexing and retrieval. Contents 1. Color Representation and Processing in Polar Color Spaces, Jesús Angulo, Sébastien Lefèvre and Olivier Lezoray. 2. Adaptive Median Color Filtering, Frédéric Robert-Inacio and Eric Dinet. 3. Anisotropic Diffusion PDEs for Regularization of Multichannel Images: Formalisms and Applications, David Tschumperlé. 4. Linear Prediction in Spaces with Separate Achromatic and Chromatic Information, Olivier Alata, Imtihan Qazi, Jean-Christophe Burie and Christine Fernandez-Maloigne. 5. Region Segmentation, Alain Clément, Laurent Busin, Olivier Lezoray and Ludovic Macaire. 6. Color Texture Attributes, Nicolas Vandembroucke, Olivier Alata, Christèle Lecomte, Alice Porebski and Imtihan Qazi. 7. Photometric Color Invariants for Object Recognition, Damien Muselet. 8. Low-tech Magazine underscores the potential of past and often forgotten technologies and how they can inform sustainable energy practices. Sometimes, past technologies can be copied without any changes. More often, interesting possibilities arise when older technology is combined with new knowledge and new materials, or when past concepts and traditional knowledge are applied to modern technology. Inspiration is also to be found in the so-called "developing" world, where resource constraints often lead to inventive, low-tech solutions. Contains 159 images in black & white.
