The 20th Century was hugely violent. It was possibly the most violent century in history. It is a clearly defined period in the past. A huge amount has been written about war, and warfare, in that period. So, what can we learn from war, and warfare, in the 20th century? War is hugely important. War shapes continents, and can do so dramatically quickly. After just 52 months of the First World War, four empires had ceased to exist. Eight new countries were born in Europe. As a result of the six years of the Second World War, Japan and Germany renounced militarism and ceased to be major players on the world stage for decades. The border of Russia moved 800km west, to the Oder. War is hugely important. It is not futile, although it appears so to some of those involved. But how effective, for example, was the allied Combined Bomber Offensive in the defeat of Germany in the Second World War? There is, in practice, no real consensus. Similarly there is very little discussion,

and apparently no agreement, as to how the western allies defeated Germany in north west Europe in 1944-5. Was it just superior numbers? (No: there were more German than Allied divisions until January 1945.) Yet both of those campaigns took place over 70 years ago. Why are those questions unanswered? 'The Hall of Mirrors is not a narrative history. It takes a deep look at war, and warfare, in the 20th Century. It looks at the strategy, the operational art, and the tactics. It looks at how technology developed, was developed, and affected military events. It looks at the human beings, the human organizations, and how they affected events. It makes judgments and comes to conclusions. By 1919 the First World War was already over. Those millions had died; those empires had crumbled; those new nations had been born. Nothing similar has happened, thus far, in this century. All the more reason to look back and consider what did happen, and what we might learn from war and warfare in the 20th century. *Hearings* Princeton University Press

Development of the Leopard 1 can be traced back to November 1956, when the operational requirement for a new battle tank was formulated by the Federal German Armed Forces (Bundeswehr). Originally a Franco-German project, the tank under design was named the 'Standard-Panzer'. The French later dropped out, however,

and on 1 October 1963 the 'Standard' tank was officially named 'Leopard', an appropriate choice considering Germany's wartime pedigree with the formidable Tiger and Panther. This book traces the development and service record of the Leopard 1, detailing its control systems, modifications and variants.

The instigation for this book was the author's doubt that the political and military confrontation in Central Europe would remain stable in a serious crisis. Uncertainty of success may deter Soviet risk-taking forty-nine years out of fifty but not in that fiftieth year if Soviet leaders should face an apparent threat to their continued hegemony in

There are few marine creatures as spectacular as the Basking Shark. At up to 11 metres in length and seven tonnes in weight, this colossal, plankton-feeding fish is one of the largest in the world, second only to the whale shark. Historically, Basking Sharks were a familiar sight in the northern hemisphere – off the coasts of Norway, Scotland, Ireland, Canada and the USA, for example. In an 18th Century world without electricity, they became the focus of active hunting for their huge livers containing large amounts of valuable oil, primarily used in lamps. Catch numbers were small enough to leave populations largely intact, but during the 20th Century a new breed of hunter joined the fray, some driven as much by a need for adventure as for financial gain. With improved equipment and experience, they exploited the shark on an industrial scale that drastically reduced numbers, leading to localised near-extinction in some areas. From the 1970's onward a new generation took to the seas, this time with conservation in mind to identify where the shark might still be found in the waters around the British Isles, employing new technologies to solve long-standing mysteries about the behaviour of this elusive creature. Using the best of both old and new research techniques, the case was built to justify the species becoming one of the most protected sharks in the oceans. Today, the Basking Shark is a much-loved cornerstone of our natural heritage. There are positive signs that the population has stabilised and may even be slowly recovering from the damage of the past, proving that timely conservation measures can be effective. Join us on a journey amidst wild seas, places, people and conservation history in the battle to protect this iconic creature – a true sea

monster's tale.

Review

Cummings' book is very interesting, refreshing and intellectually stimulating... It should be a mandatory textbook for all serious students of management - Management Learning`Stephen Cummings' ReCreating Strategy is currently the best book on strategy, combining a holistic and critical understanding of the issue -Stewart Clegg, University of Technology, Sydney`An imaginative attempt to bring together and apply the many analytical frameworks relating to the organization as a whole into strategy theory and practice. Written for students on strategy, change management and more general management and organization theory courses. Encourages students to question assumptions and think creatively about strategy and management. Stimulating and original - Long Range Planning`In this intriguing book [Cummings] claims to be surprised that academics critical of management theory don't critique its history, and proposes a kind of liberation theology in response, but this is not as doctrinaire. It's more like replacing some well-justified habits with a refreshing originality of approach. The outcome is stimulating.... The author offers a cogently argued deconstruction of some well-known frameworks in strategy, and delivers his own reinterpretation of strategic discourse. There are five longer case studies in the book and several shorter vignettes scattered throughout early chapters, as well as pedagogical aids at the end of each chapter - Best of Biz, The Business Information Site`Do you worry about organizations becoming slaves to markets? Do you wish that organizations had

the nerve to build their own ethos rather than just grubbing for profit? Do you aspire to inspiration rather than perspiration? Why does management practice get in the way of thinking and creativity? Stephen Cummings provides insight and guidance in a book of genuine scholarship and creativity - John McGee, President of the Strategic Management Society, USA`Management courses need more of what Stephen is offering. He wants us to go on an`unlearning curve', one which leads to fresh thinking about strategy and the emerging roles and responsibilities of business and companies. This book not only tells us where we are coming from but, more importantly, it inspires us to think profoundly about where we could go. It's also a very good read - Josephine Green, Director of Trends and Strategy, Philips`ReCreating Strategy provides a challenging examination of the emergence of management which combines postmodern and orthodox perspectives. Stephen Cummings is able to provide not only a fresh treatment of strategy and ethics but also to engage with a variety of potential audiences. He provokes and informs in equal measure - Richard Whipp, Cardiff University`A truly eclectic approach to strategy! Intellectually capturing, the book is great fun to read at the same time. A must for those who want to discuss management beyond styles, fads and fashions - Hubert Wagner, Qonsult`ReCreating Strategy is written for students of strategy, change management and more general management and organization theory courses. It will provide a better understanding of how to bring together and apply the many analytical frameworks relating to the organization as a whole. Stephen Cummings challenges the view that there is never one best framework and shows why the latest theory is

not necessarily better than earlier ones. The textbook includes short and long case studies, interesting pictorial aids and examples, and a generally more participative and rewarding approach than that offered by more mainstream texts. PowerPoint slides to accompany the book are now also available by clicking on the link to `Sample Chapters and Resources` in the left hand margin. The book also offers more scope for individual lecturers who wish to encourage students to question assumptions and think creatively about strategy and management.
