#### Engineering Fundamentals- Chapter 1 Flashcards | Quizlet

When you execute (or open or run) an application or program either on your desktop computer, laptop or smart phone, the computer begins to perform operations behind the scene. The operations that a computer can perform include storing, accessing and manipulating (or processing) information, or data (specifically, numbers). At some point, however, for this to happen, a developer (or programmer) had to specify what operations the computer should perform.
