Bad things happen to good people. Events not always under our control can often result in our credit scores going down, and sometimes way, way down. There are consumer protection laws that you can use to remove negative items from your credit report,. Because of a quirk in the law you can, as the author did, remove items that really are yours. But if you try to go it alone, the credit repair journey can be a nightmare. This book introduces a step-by-step credit repair system, actual documents the author used to settle suits, and legal cases filed in federal courts against major credit bureaus. These are the credit repair secrets they really don't want to you to know, from someone who successfully challenged the credit reporting industry. Contrary to what you may believe, there is a way to improve your credit score substantially, and this book will help you get there. The author was a vice president at Guardian Bank in charge of the collection department and went on to start a collection agency. After selling the agency he became a credit restoration coach. To prove what he knew in theory could in fact be done, he stopped paying everything: repossession, foreclosure, medical bills, student loans, and credit

cards. He even filed for bankruptcy. His credit score went from over 800 down to 461. He had it back to 742 in five months. Mr. Mansfield walks you through every step of the credit restoration process. As a bonus, when you purchase the book there's information on how to contact Mr. Mansfield directly! There is no other credit restoration book like this. **Understanding Canadian Business** Cambridge University Press

"Data-driven criminal justice operations creates millions of criminal records each year in the United States. Documenting

everything from a police stop to a prison sentence, these records take on a digital life of their own as they are collected and posted by police, courts, and prisons, and then re-posted on social media, online news and mugshot galleries, and bought and sold by data brokers as an increasingly valuable data commodity. The result is "digital punishment," where mere suspicion or a brush with the law can have lasting consequences. This analysis describes the transformation of criminal records into millions of data points, the commodification of this data into a valuable digital resource, and the impact of this shift on people, society, and public policy. The consequences of digital punishment, as described in hundreds of interviews detailed in this book, lead people to purposefully opt out of society as they cope with privacy and due process violations"--

Managing Data in Motion describes techniques that have been developed for significantly reducing the complexity of managing system interfaces and enabling scalable architectures. Author April Reeve brings over two decades of experience to present a vendor-neutral approach to moving data between computing environments and systems. Readers will learn the techniques, technologies, and best practices for managing the passage of data between computer systems and integrating disparate data together in an enterprise environment. The average enterprise's computing environment is comprised of hundreds to thousands computer systems that have been built, purchased, and acquired over time. The data from these various systems needs to be integrated for reporting and analysis, shared for business transaction processing, and converted from one format to another when old systems are replaced and new systems are acquired. The management of the "data in motion" in organizations is rapidly becoming one of the biggest concerns for business and IT management. Data warehousing and conversion, real-time data integration, and cloud and "big data" applications are just a few of the challenges facing organizations and businesses today. Managing Data in Motion tackles these and other topics in a style easily understood by business and IT managers as well as programmers and architects. Presents a vendor-neutral overview of the different technologies and techniques for moving data between computer systems including the emerging solutions for unstructured as well as structured data types Explains, in non-technical terms, the architecture and components required to perform data integration Describes how to reduce the complexity of managing system interfaces and enable a scalable data architecture that can handle the dimensions of "Big Data"

On every front, 24 hours a day, you and your wealth face threats of an intensity that would have been unimaginable only a few short years ago. A sinister marriage of law and technology has made the pervasive and continuous surveillance that George Orwell warned of a reality. Identity thieves, greedy lawyers and the government have been quick to exploit this fast-evolving global surveillance network: - Data thieves can hijack your PC with easy-to-use hacking tools that even a 10-year old can master. After stealing your log-on passwords, they can drain your bank accounts. - If someone has a grudge against you, he can learn whether you're "worth

suings" with a few clicks of a mouse. Hundreds of Web sites offer asset-tracking services to find your real estate ownership records, bank account balances, and much more. - Secret government data mining programs monitor your personal and financial activities 24 hours a day for "suspicious transactions." One oversight--becoming friends on Facebook with a suspected terrorist, withdrawing too much cash, unknowingly renting property to someone with a criminal background, etc.--and you could find yourself under arrest and your assets frozen. . Fortunately, you CAN fight back. You can secure your PC to make it virtually invulnerable to hackers. You can legally create international "lifeboats" of wealth and privacy that are practically invulnerable to snooping. You can understand what the government regards as suspicious ... and avoid raising your profile unnecessarily.
