Cliff Richard has been Britain's longest surviving and most consistent hit music maker. Starting his career as a rock 'n' roll threat to decent, upstanding citizens, he is now a friend to Royalty and prime ministers, a

Knight, and a holder of the OBE. This book tells his story chronologically, through the voices of his friends, family, and colleagues including songwriters, film directors, managers, and agents—like listening in on a dinner party attended by most of the key people in his career. The stories reveal Cliff as seen by those closest to him and, in contrast to the many official publications, this book does not just include the flattering stories. The author's probing questions have elicited extraordinary memories and observations, previously unheard by the public. Heavily illustrated with rare and interesting photographs of Cliff at work and play, this unique oral history will stand as a lasting testament to one of the most glorious careers in British show business.

Too often literary criticism is academic exercise rather than creative act. For the multifaceted Julio Ortega—respected poet, dramatist, and novelist in his own right—the act of criticism becomes profoundly creative, his incisive readings of the text far transcending the pedantry that may falsely pass for imagination, intelligence, and rigor. Nearly every Spanish-American writer of consequence, from Paz to Fuentes, Cortázar to Lezama Lima, has extolled Ortega's criticism as not merely a reflection but an essential part of the renaissance that took place in Spanish-American letters during the late twentieth century. Poetics of Change brings together Ortega's most penetrating and insightful analyses of the fiction of Borges, Fuentes, García Márquez, Carpentier, Rulfo, Cabrera Infante, and others responsible for great writing from Spanish America. Ortega concerns himself most with the semantic innovations of these masters of the modern narrative and their play with form, language, and the traditional boundaries of genre. Mapping their creative territory,

he finds that the poetics of Spanish-American writing is that of a dynamically changing genre that has set exploration at its very heart.

More confiding than Faraday, Lakhovsky has told me the gist of his ideas on radiations and their effects on living beings. He thought, and rightly, that his ideas could not shock an experimenter who, for the past thirty-five years, had studied the effects of the full range of Hertzian waves on animals and microbes. In scientific research it is advisable to encourage what appears to be the most daring ideas. I have lived in the intimacy of two great men: Claude Bernard and Brown-Sequard, who revelled in new ideas. And it did not pay them too badly! The phenomena of resonance have long been familiar to physiologists. We all know the acoustic resonators of the organ of Corti, the optic resonators of the retina since the famous researches of Helmholtz. And still more familiar to us, the biological resonators of Charles Henry. Lopicque, Latzareff and myself have invoked on several occasions the phenomena of cellular resonance in order to explain the action of nervous influences or other physical agents in living beings. That space is full of forces which are unknown to us, and that living beings emit radiations or effluvia of which we are not aware, but whose significance has attracted the attention of certain observers, are facts that I have long since accepted. Anything is possible. But one must not accept anything except that which can be experimentally proved. The ideas of an insane person differ from the conceptions of a genius mainly because experiment invalidates the former and confirms the latter. Lakhovsky, encouraged by his own researches and the practical results he has obtained, is particularly anxious that his theories should rouse interest and stimulate experimental work among independent investigators. Lakhovsky's theories constitute what Claude Bernard

called "working hypotheses." In the "Secret of Life" Lakhovsky confines himself to the study of electromagnetic waves, deeply penetrating waves and unknown waves. There are certainly many more processes of energy transmission besides those revealed to us by Newton and Fresnel. It is in the study of human beings that the chances of discovering such processes are most promising. Therefore, let us experiment by using the methods of physicists and chemists, and let us aim at discovering the special detector mentioned in the conclusion of this work.

This book provides an overview of the ACCESS program, a mental health program that has been developed and tested as an efficacious treatment for college students with ADHD. This program is at the cutting edge of clinical research, incorporating treatment strategies that allow for dissemination in real world settings in order to effectively assist college students experiencing difficulties in their academic, personal, social, and emotional functioning. As cognitive behavioral approaches have proved to be the most successful psychological treatments to date, the techniques in this volume follow that model in a detailed and nuanced fashion. The authors provide a week by week breakdown of the program, supplemented by handouts and worksheets designed to facilitate better understanding of the areas targeted by the program. Filling a notable gap in research addressing the ADHD college student population, CBT for College Students with ADHD is a crucial resource for campus mental health practitioners as well as a broad range of clinicians dealing with emerging adults.
