The authors trace the emergence of Ataturk and Reza Shah through the constitutional revolutions in Iran and the Ottoman Empire, which led to the introduction of European social models, the establishment of dictatorship and of secularist reforms. This produced in both Turkey and Iran highly authoritarian, nationalist, and quasi-westernised states, where the personality cult of the leader defined the politics of each country."

IPv6 Security Protection measures for the next Internet Protocol As the world ' s networks migrate to the IPv6 protocol, networking professionals need a clearer understanding of the security risks, threats, and challenges this transition presents. In IPv6 Security, two of the world ' s leading Internet security practitioners review each potential security issue introduced by IPv6 networking and present today ' s best solutions. IPv6 Security offers guidance for avoiding security problems prior to widespread IPv6 deployment. The book covers every component of today ' s networks, identifying specific security deficiencies that occur within IPv6 environments and demonstrating how to combat them. The authors describe best practices for identifying and resolving weaknesses as you maintain a dual stack network. Then they describe the security mechanisms you need to implement as you migrate to an IPv6-only network. The authors survey the techniques hackers might use to try to breach your network, such as IPv6 network reconnaissance, address spoofing, traffic interception, denial of service, and tunnel

injection. The authors also turn to Cisco® products and protection mechanisms. You learn how to use Cisco IOS® and ASA firewalls and ACLs to selectively filter IPv6 traffic. You also learn about securing hosts with Cisco Security Agent 6.0 and about securing a network with IOS routers and switches. Multiple examples are explained for Windows, Linux, FreeBSD, and Solaris hosts. The authors offer detailed examples that are consistent with today ' s best practices and easy to adapt to virtually any IPv6 environment. Scott Hogg, CCIE® No. 5133, is Director of Advanced Technology Services at Global Technology Resources, Inc. (GTRI). He is responsible for setting the company ' s technical direction and helping it create service offerings for emerging technologies such as IPv6. He is the Chair of the Rocky Mountain IPv6 Task Force. Eric Vyncke, Cisco Distinguished System Engineer, consults on security issues throughout Europe. He has 20 years ' experience in security and teaches security seminars as a guest professor at universities throughout Belgium. He also participates in the Internet Engineering Task Force (IETF) and has helped several organizations deploy IPv6 securely. Understand why IPv6 is already a latent threat in your IPv4-only network Plan ahead to avoid IPv6 security problems before widespread deployment Identify known areas of weakness in IPv6 security and the current state of attack tools and hacker skills Understand each high-level approach to securing IPv6 and learn when to use each Protect service provider networks, perimeters, LANs, and host/server connections Harden IPv6 network devices against attack Utilize IPsec in IPv6 environments Secure mobile IPv6 networks Secure transition mechanisms in use during the migration from IPv4 to IPv6 Monitor IPv6 security Understand the security implications of the IPv6 protocol, including issues related to ICMPv6 and the IPv6 header structure Protect your network against large-scale threats by using perimeter filtering techniques and service provider—focused security practices Understand the vulnerabilities that exist on IPv6 access networks and learn solutions for mitigating each This security book is part of the Cisco Press® Networking Technology Series. Security titles from Cisco Press help networking professionals secure critical data and resources, prevent and mitigate network attacks, and build end-to-end self-defending networks. This book provides an overview of the ACCESS program, a mental health program that has been developed and tested as an efficacious treatment for college students with ADHD. This program is at the cutting edge of clinical research, incorporating treatment strategies that allow for dissemination in real world settings in order to effectively assist college students experiencing difficulties in their academic, personal, social, and emotional functioning. As cognitive behavioral approaches have

proved to be the most successful psychological treatments to date, the techniques in this volume follow that model in a detailed and nuanced fashion. The authors provide a week by week breakdown of the program, supplemented by handouts and worksheets designed to facilitate better understanding of the areas targeted by the program. Filling a notable gap in research addressing the ADHD college student population, CBT for College Students with ADHD is a crucial resource for campus mental health practitioners as well as a broad range of clinicians dealing with emerging adults.

Academic research projects contribute to many advancements in modern life. Thus, the supervision of such works on the doctoral level is extremely important, and must constantly evolve in order to help disseminate the most accurate information available. Examining the Changing Role of Supervision in Doctoral Research Projects: Emerging Research and Opportunities is a pivotal scholarly resource that examines the current practices that research supervisors adhere to and outlines innovative ways that these techniques can be improved upon. Covering relevant topics such as study environments, technology support, research networks, and research design, this publication is ideal for academics, graduate students, and researchers that are interested in discovering a more streamlined method of supervision for research works.

To Live Is Christ Walter de Gruyter

This large-scale comparative study analyses the two principal mechanisms employed in modern legal systems to deal with the social problem of occupational illness and injury, namely, employers' liability and workers' compensation. It provides a detailed description of the systems in operation in twelve countries around the world, investigating the complex legal structures and the interaction with other social institutions, as well as their inter-jurisdictional coordination through private international law. Current international trends are identified and assessed and the fundamental political issues highlighted and explored. The study's ultimate goals are not only descriptive but also to answer the question of how compensation and liability systems can best be adapted to meet society's needs in the 21st century. The countries covered are: Australia (Mark Lunney), Austria (Ernst Karner/Felix Kernbichler), Denmark (Vibe Ulfbeck), England and Wales (Richard Lewis), France (Florence G'Sell/Isabelle Veillard), Germany (Raimund Waltermann), Italy (Alessandro P Scarso/Massimo Foglia), Japan (Keizo Yamamoto/Tomohiro Yoshimasa), the Netherlands (Siewert D Lindenbergh), Poland (Domenika D ö rre-Nowak), Romania (Christian Alunaru/Lucian Bojin) and the United States of America (Michael D Green/Daniel S Murdock). The book is completed by three concluding essays that address general themes: Thomas Thiede, The European Coordination of Employers' Liability and Workers' Compensation Ken Oliphant, The Changing Landscape of Work Injury Claims: Challenges for Employers' Liability and Workers' Compensation Gerhard Wagner, New Perspectives on Employers' Liability - Basic Policy Issues

In the context of Geographical Information Systems (GIS) the book offers a timely review of Map Projections. The first chapters are of foundational type. We introduce the mapping from a left Riemann manifold to a right one specified as conformal, equiaerial and equidistant, perspective and geodetic. In particular, the mapping from a Riemann manifold to a Euclidean manifold ("plane") and the design of various coordinate systems are reviewed . A speciality is the treatment of surfaces of Gaussian curvature zero. The largest part is devoted to the mapping the sphere and the ellipsoid-of-revolution to tangential plane, cylinder and cone (pseudo-cone) using the polar aspect, transverse as well as oblique aspect. Various Geodetic Mappings as well as the Datum Problem are reviewed. In the first extension we introduce optimal map projections by variational calculus for the sphere, respectively the ellipsoid generating harmonic maps. The second extension reviews alternative maps for structures , namely torus (pneu), hyperboloid (cooling tower), paraboloid (parabolic mirror), onion shape (church tower) as well as clothoid (Hight Speed Railways) used in Project Surveying. Third, we present the Datum Transformation described by the Conformal Group C10 (3) in a threedimensional Euclidean space , a ten parameter conformal transformation. It leaves infinitesimal angles and distance ratios equivariant. Numerical examples from classical and new map projections as well as twelve appendices document the Wonderful World of Map Projections.

Handbook of Imaging Materials, Second Edition,

Contrary to popular belief, economic growth is not the antithesis of environmental quality; rather, the two go hand in hand if the incentives are right. The author shows how, by developing and protecting the institutions of freedom rather than regulating human use of natural resources through political processes, we can have our environmental cake and eat it too.
