When Lexus launched fifteen years ago, the idea of a Japanese brand that would compete fender to fender with Mercedes-Benz, BMW, and Cadillac seemed preposterous. But Lexus' first sedan shocked the world. The result of hundreds of prototypes, the work of more than 1,000 engineers, and some \$1 billion, the Lexus LS 400 pioneered new ground. Within just a few years, Lexus had transformed itself from an unlikely outsider into one of the industry's leaders as it redefined the idea of the luxury vehicle while also building a dealer network that gave unprecedented attention to service. The Lexus Story describes the brand's rapid ascent and its travails along the way. The Lexus Story is the first journalistic telling of the history of this extraordinary company. And it is the only account afforded full access to the designers, engineers, dealers, and company leaders who molded the cars and the brand. The Lexus Story takes readers deep inside the making of first-class automobiles, from the creative sparks kindled in Lexus' far-flung design studios to the engineering refinements that translate ideals of performance and luxury into steel, glass, and rubber. Designed to be both readable and visually welcoming with more than 200 full-color photographs, The Lexus Story is a compelling history of a world-class brand.

A driveline expert guides you through each step of the rebuild process for 8.8- and 9-inch axle assemblies, so you can confidently complete the work yourself. He explains in detail limited-slip and open differential disassembly, inspection, assembly, final calibration, and break-in. He also shows you how to identify worn ring-and-pinion gears, rebuild clutch packs, set the correct contact pattern for pinion and ring gears as well as the backlash, and much more.

Advanced Electric Drive Vehicles DK Publishing (Dorling Kindersley)

This is a book for tall people, those who relate to them, and anyone interested in height in general. Being tall coincides with considerable professional, athletic, and social benefits. Yet there are also some problems, and these raise some questions. For instance, if longer levers and more cells really are behind increased risk of injuries and cancer, then

how is it that giraffes get by? And why is it that society reveres tall stature but then compromises our safety with cramped cars and other things? And, as tall women might be pondering, where have all the tall, dark, and handsome men gone? Lastly, what can be done about all this? These questions and more will all be answered by a tall protagonist over eight chapters: Evolution, Scaling, Spine, Manufactured, Ergonomics, Growth, Longevity, and Society.

CarTech Inc Electrification is an evolving paradigm shift in the transportation industry toward more efficient, higher performance, safer, smarter, and more reliable vehicles. There is in fact a clear trend to move from internal combustion engines (ICEs) to more integrated electrified powertrains. Providing a detailed overview of this growing area, Advanced Electric Drive Vehicles begins with an introduction to the automotive industry, an explanation of the need for electrification, and a presentation of the fundamentals of conventional vehicles and ICEs. It then proceeds to address the major components of electrified vehicles—i.e., power electronic converters, electric machines, electric motor controllers, and energy storage systems. This comprehensive work: Covers more electric vehicles (MEVs), hybrid electric vehicles (HEVs), plug-in hybrid electric vehicles (PHEVs), range-extended electric vehicles (REEVs), and all-electric vehicles (EVs) including battery electric vehicles (BEVs) and fuel cell vehicles (FCVs) Describes the electrification technologies applied to nonpropulsion loads, such as power steering and air-conditioning systems Discusses

hybrid battery/ultra-capacitor energy storage systems, as well as 48-V electrification and belt-driven starter generator systems Considers vehicle-to-grid (V2G) interface and electrical infrastructure issues, energy management, and optimization in advanced electric drive vehicles Contains numerous illustrations, practical examples, case studies, and challenging questions and problems throughout to ensure a solid understanding of key concepts and applications Advanced Electric Drive Vehicles makes an ideal textbook for senior-level undergraduate or graduate engineering courses and a user-friendly reference for researchers, engineers, managers, and other professionals interested in transportation electrification.

America, Incorporated Although there are many good books on the history of Jews in America and a smaller subset that focuses on aspects of Orthodox Judaism in contemporary times, no one, until now, has written an overview of how Orthodoxy in America has evolved over the centuries from the first arrivals in the 17th century to the present. This broad overview by Gurock (Libby M. Klaperman Professor of Jewish

History, Yeshiva Univ.; Judaism's Encounter with American Sports) is distinctive in examining how Orthodox Jews have coped with the personal, familial, and communal challenges of religious freedom, economic opportunity, and social integration, as well as uncovering historical reactionary tensions to alternative Jewish movements in multicultural and pluralistic America. Gurock raises penetrating questions about the compatibility of modern culture with pious practices and sensitively explores the relationship of feminism to traditional Orthodox Judaism. There are several excellent reference sources on Orthodox Jews in America, e.g., Rabbi Moshe D. Sherman's outstanding *Orthodox Judaism in America: A Biographical Dictionary and Sourcebook*, to which this is an accessible and illuminating companion; recommended not only for serious readers on the topic but for general readers as well. Between 1953 and 1980 the Triumph competitions department produced more than 150 'works' competition cars for race and rally. These included TR2, TR3 and TR3A, the TR3S, TRS and Conrero race cars, Herald and Vitesse, TR4, 2000, Spitfire and GT6R, 2.5 PI, Dolomite and Sprint, TR7 and TR7 V8. In addition they prepared Standard Eight, Ten, Pennant, and Phase III Vanguard for competition. Viewed overall, what stands out as the remarkable feature of the work of the department was that they achieved such a

degree of success with relatively ordinary production cars, from 803cc saloons upwards. Author Graham Robson was manager of the Standard-Triumph competitions department in the early 1960s and himself supervised the development and management of the works TR4s, Spitfires and 2000s. Here he provides information on each and every one of the works cars of the whole 1953-80 period, with details of their specifications, entries, drivers and careers, accompanied in nearly all cases by archive photographs. In addition there is specially commissioned colour photography of important surviving examples.
