The consumer price index (CPI) measures the rate at which prices of consumer goods and services change over time. It is used as a key

indicator of economic performance, as well as in the setting of monetary and socio-economic policy such as indexation of wages and social security benefits, purchasing power parities and inflation

measures. This manual contains methodological guidelines for statistical offices and other agencies responsible for constructing and calculating CPIs, and also examines underlying economic and statistical concepts involved. Topics covered include: expenditure weights, sampling, price collection, quality adjustment, sampling, price indices calculations, errors and bias, organisation and management,

dissemination, index number theory, durables and user costs.

The debut cookbook by the creator of the wildly popular blog Damn Delicious proves that quick and easy doesn't have to mean boring. Blogger Chungah Rhee has attracted millions of devoted fans with recipes that are undeniable 'keepers' -each one so simple, so easy, and so flavor-packed, that you reach for them busy night after busy night. In Damn Delicious, she shares exclusive new recipes as well as her most beloved dishes, all designed to bring fun and excitement into everyday cooking.

From five-ingredient Mini Deep Dish Pizzas to no-fuss Sheet Pan Steak & Veggies and 20-minute Spaghetti Carbonara, the recipes will help even the most inexperienced cooks spend less time in the kitchen and more time around the table. Packed with quickie breakfasts, 30-minute skillet sprints, and speedy takeout copycats, this cookbook is guaranteed to inspire readers to whip up fast, healthy, homemade meals that are truly 'damn delicious!'

takes a holistic view of broadband access networks—from architecture to network technologies and network economies. The book reviews pain points and challenges that broadband service providers face (such as network construction, fiber cable efficiency, transmission challenges, network	scalability, etc.) and how these challenges are tackled by new fiber access transmission technologies, protocols and architecture innovations. Chapters cover fiber-to-the-home (FTTH) applications as well as fiber backhauls in other access networks such as 5G wireless and hybrid-fiber-	coax (HFC) networks. In addition, it covers the network economy, challenges in fiber network construction and deployment, and more. Finally, the book examines scaling issues and bottlenecks in an end-to-end broadband network, from Internet backbones to inside customer homes, something rarely covered in books.

Laboratory Techniques in Thrombosis — a Manual

Not another book on breadmaking! A forgivable reaction given the length of time over which bread has been made and the number of texts which have been written about the subject. To study breadmaking is to realize that, like many other

food processes, it is constantly changing as processing methodologies become increasingly more sophisticated, yet at the same time we realize that we are dealing with a food stuff, the forms of which are very traditional. We can, for example, look at ancient illustrations of breads in manuscripts and paintings and recognize products which we still make today. This contrast of ancient and modern embodied in a single processed foodstuff is part of what makes bread such a unique subject for study. We cannot, for example, say the same for a

can of baked beans! Another aspect of the uniqueness of breadmaking lies in the requirement for a thorough understanding of the link between raw materials and processing methods in order to make an edible product. This is mainly true because of the special properties of wheat proteins, aspects of which are explored in most of the chapters of this book. Wheat is a product of the natural environment, and while breeding and farming practices can modify aspects of wheat quality, we millers and bakers still have to respond to the strong

influences of the environment.

This manual is a comprehensive compilation of "methods that work" for deriving, characterizing, and differentiating hPSCs, written by the researchers who developed and tested the methods and use them every day in their laboratories. The manual is much more than a collection of recipes; it is intended to spark the interest of scientists in areas of stem cell biology that they may not have considered to be important to their work. The second edition of the Human Stem Cell Manual is an extraordinary laboratory guide

for both experienced stem cell researchers and those just beginning to use stem cells in their work. Offers a comprehensive guide for medical and biology researchers who want to use stem cells for basic research, disease modeling, drug development, and cell therapy applications. Provides a cohesive global view of the current state of stem cell research, with chapters written by pioneering stem cell researchers in Asia, Europe, and North America. Includes new chapters devoted to recently developed methods, such as iPSC technology, written by the scientists who made these breakthroughs.

The New Artisan Bread in Five Minutes a Day is a fully revised and updated edition of the bestselling, ground-breaking, and revolutionary approach to bread-making--a perfect gift for foodies and bakers! With more than half a million copies of their books in print, Jeff Hertzberg and Zoë François have proven that people want to bake their own bread, so long as they can do it easily and quickly. Based on fan feedback, Jeff and Zoë have completely revamped their

first, most popular, and now-classic book, *Artisan Bread in Five Minutes a Day*. Responding to their thousands of ardent fans, Jeff and Zoë returned to their test kitchens to whip up more delicious baking recipes. They've also included a gluten-free chapter, forty all-new gorgeous color photos, and one hundred informative black-and-white how-to photos. They've made the "Tips and Techniques" and "Ingredients" chapters bigger and better than ever before, and included readers' Frequently Asked Questions. This revised edition also includes more than thirty

brand-new recipes for Beer-Cheese Bread, Crock-Pot Bread, Panini, Pretzel Buns, Apple-Stuffed French Toast, and many more. There's nothing like the smell of freshly baked bread to fill a kitchen with warmth, eager appetites, and endless praise. Now, using Jeff and Zoë's innovative technique, you can create bread that rivals those of the finest bakers in the world in just five minutes of active preparation time. *Fresh from the Freezer* Springer Science & Business Media Comprehensive Performance

The Food Lab: Better Home Cooking Through Science Academic Press Cell gene engineering is emerging as a field with outstanding impact, not only in medicine/biology, but also, and perhaps most importantly, in agriculture and in all those food sciences involved in the fight against world hunger. Lentivirus vector-based technologies represent the last frontier in the development of powerful and reliable methods for both in vitro and in vivo	gene transfer in eukaryotic animal cells. Although the design of lentivirus vectors is closely reminiscent of those already successfully applied to the construction of oncoretroviral vectors, some unique features, e.g., the efficiency in transducing both postmitotic and stem cells, render the use of lentivirus vectors invaluable. It has been a great pleasure to edit Lentivirus Gene Engineering Protocols, owing in part to the high level of enthusiasm that the authors demonstrated in contributing to this book.

The fact that so many outstanding scientists engaged in lentivirus vector research have provided articles renders it so- thing more than a technical handbook. In addition to detailed descriptions of the most innovative methodologies, the reader may find very informative ov- views concerning both theoretical and practical aspects of the origin and the development of diverse lentivirus vector types. This, in my opinion, rep- sents a unique added value of this

volume, which should help our work resist the passage of time, to which books such as this are particularly sensitive. WHO Laboratory Manual for the Examination of Human Semen and Sperm-Cervical Mucus Interaction Springer Science & Business Media

The design, function, and challenges of online telerobotic systems. Remote-controlled robots were first developed in the 1940s to handle radioactive materials. Trained experts now use them to explore deep in sea and space, to defuse bombs, and to clean up hazardous spills.

Today robots can be controlled by anyone on the Internet. Such robots include cameras that not only allow us to look, but also go beyond Webcams: they enable us to control the telerobots'

movements and actions. This book summarizes the state of the art in Internet telerobots. It includes robots that navigate undersea, drive on Mars, visit museums, float in blimps, handle protein crystals, paint pictures, and hold human hands. The book describes eighteen systems, showing how they were designed, how they function online, and the engineering challenges they meet.

In this new edition, the editors have thoroughly updated and dramatically expanded the number of protocols to take advantage of the newest

technologies used in all branches of research and clinical medicine today. These proven methods include real time PCR, SNP analysis, nested PCR, direct PCR, and long range PCR. Among the highlights are chapters on genome profiling by SAGE, differential display and chip technologies, the amplification of whole genome DNA by random degenerate oligonucleotide PCR, and the refinement of PCR methods for the analysis of fragmented DNA from fixed tissues. Each fully tested protocol is described in step-by-step detail by an

established expert in the field and includes a background introduction outlining the principle behind the technique, equipment and reagent lists, tips on trouble shooting and avoiding known pitfalls, and, where needed, a discussion of the interpretation and use of results.

Since 1984, we have organized satellite symposia on retinal degenerations that are held in conjunction with the biennial International Congress of Eye Research. The timing and location of our Retinal Degeneration Symposia have allowed scientists and clinicians from around the world to convene and present their exciting new findings. The symposia have been arranged to allow ample time for discussions

and one-on-one interactions in a relaxed atmosphere, where international friendships and collaborations could be established. The IXth International Symposium on Retinal Degeneration was held on October 9-14, 2000 in Durango, Colorado and was attended by over 100 scientists from six continents. This book contains many of their presentations. Several events of note occurred at this meeting. First, thanks to the generous support of the Foundation Fighting Blindness, we were able to sponsor the travel of 11 young scientists from six countries. Most of them have contributed chapters to this volume. The response to the travel

program was so overwhelming that we will make it regular feature of our meeting. This will allow other bright, young investigators to be introduced to the world experts who study retinal degenerations. Second, about 40% of the scientists who attended this meeting were there for the first time. We believe that this indicates a growing interest in retinal degeneration research and ensures that new talent will be attracted to this important area of investigation. The symposium received support from several organizations.
