NATIONAL BESTSELLER • “ Exciting and provocative . . . A tour de force of a book that begs to be seen as well as to be read. ” —The Washington Post Book World World renowned scientist Carl Sagan and acclaimed author Ann Druyan have written a Roots for the human species, a lucid and riveting account of how humans got to be the way we are. *Shadows of Forgotten Ancestors* is a thrilling saga that starts with the origin of the Earth. It shows with humor and drama that many of our key traits—self-awareness, technology, family ties, submission to authority, hatred for those a little different from ourselves, reason, and ethics—are rooted in the deep past, and illuminated by our kinship with other animals. Sagan and Druyan conduct a breathtaking journey through space and time, zeroing in on critical turning points in evolutionary history, and tracing the origins of sex, altruism, violence, rape, and dominance. Their book culminates in a stunningly original examination of the connection between primate and human traits. Astonishing in its scope, brilliant in its insights, and an absolutely compelling read, *Shadows of Forgotten Ancestors* is a triumph of popular science.

At the turn of the last millennium, a powerful Native American civilization emerged and flourished in the American Midwest. By A.D. 1050 the population of its capital city, Cahokia, was larger than that of London. Without the use of the wheel, beasts of burden, or metallurgy, its technology was of the Stone Age, yet its culture fostered widespread commerce, refined artistic expression, and monumental architecture. The model for this urbane world was nothing less than the cosmos itself. The climax of their ritual center was a four-tiered pyramid covering fourteen acre rising a hundred feet into the sky—the tallest structure in the United States until 1867. This beautifully illustrated book traces the history of this six-square-mile area in the central Mississippi Valley from the Big Bang to the present. Chappell seeks to answer fundamental questions about this unique, yet still relatively unknown space, which was designated a UNESCO World Heritage Site in 1982. How did this swampy land become so amenable to human life? Who were the remarkable people who lived here before the Europeans came? Why did the whole civilization disappear so rapidly? What became of the land in the centuries after the Mississippians abandoned it? And finally, what can we learn about ourselves as we look into the changing meaning of Cahokia through the ages? To explore these questions, Chappell probes a wide range of sources, including the work of astronomers, geographers, geologists, anthropologists, and archaeologists. Archival photographs and newspaper accounts, as well as interviews with those who work at the site and Native Americans on their annual pilgrimage to the site, bring the story up to the present. Tying together these many threads, Chappell weaves a rich tale of how different people conferred their values on the same piece of land and how the transformed landscape, in turn, inspired different values in them—cultural, spiritual, agricultural, economic, and humanistic.

Conventional medical science on the Chinese art of Tai Chi now shows what Tai Chi masters have known for centuries: regular practice leads to more vigor and flexibility, better balance and mobility, and a sense of well-being. Cutting-edge research from Harvard Medical School also supports the long-standing claims that Tai Chi also has a beneficial impact on the health of the heart, bones, nerves and muscles, immune system, and the mind. This research provides fascinating insight into the underlying physiological mechanisms that explain how Tai Chi actually works. Dr. Peter M.
