The smartphone is often literally right in front of our nose, so you would think we would know what it is. But do we? To find out, 11 anthropologists each spent 16 months living in communities in Africa, Asia, Europe and South America, focusing on the take up of smartphones by older people. Their research reveals that smartphones are technology for everyone, not just for the young. The Global Smartphone presents a series of original perspectives deriving from this global and comparative research project. Smartphones have become as much a place within which we live as a device we use to provide 'perpetual opportunism', as they are always with us. The authors show how the smartphone is more than an 'app device' and explore differences between what people say about smartphones and how they use them. The smartphone is unprecedented in the degree to which we can transform it. As a result, it quickly assimilates personal values. In order to comprehend it, we must take into consideration a range of national and cultural nuances, such as visual communication in China and Japan, mobile money in Cameroon and Uganda, and access to health information in Chile and Ireland – all alongside diverse trajectories of ageing in Al Quds, Brazil and Italy. Only then can we know what a smartphone is and understand its consequences for people's lives around the world.

Since the last century, remarkable advances at both the basic and clinical levels have considerably improved our ability to evaluate and treat children with neurological disorders. Many cases seen by general pediatricians are primarily neurological accounting for up to 30% of all consultations to pediatrics with a high ratio of follow-up visits to new patients of about 3:1. This manual is a neurology reference for medical students and pediatric residents and is intended to supplement larger textbooks on pediatric neurology already available. Many of undergraduate medical students refer to deficient and oversimplified references that do not enable them to deal with pediatric neurology patients adequately. The manual presents a simplified, organized, and comprehensive problem based approach to common pediatric neurological disorders directed to the level of medical students, pediatric residents, general practitioners and general pediatricians. This e-book is thus a concise outline with practical tips to facilitate proper diagnosis and management of various neurological disorders. -- Publisher.

"Drawing on the knowledge and experience of leading managers, practitioners and researchers, research and case studies, this book provides a unique and comprehensive analysis of Quality Assurance (QA) concepts, approaches, models, issues, practices and research in ODL and ICT worldwide. The book is global in scope and covers both the developed and developing world. It considers the theory, research and practice of policy-making and implementation in QA and accreditation, and also the institutional and cultural acceptability of QA as well as the areas regarded as problematic. With the growth of cross-border education, institutions must provide evidence of the quality of their courses, teaching, learning and management systems for national and international accreditation. This exposes them to rigorous external review and requires their conformity with national and international

regulatory environments and benchmarks. It also increases their awareness of, and responsiveness to, national and global quality standards. This edited collection provides policy-makers, ODL researchers, and Higher Education administrators with an invaluable resource on QA and accreditation models and policies from around the World"--Provided by publisher
