With this book, Thomas Menthe provides new insights into the era of value-selling, which has been the Number 1 method in selling complex products and services. Today, customers are expecting more while paying less and the value of your offer is defined by the customer not by the seller. Data is the new oil - the new digital age allows different ways with technology like machine learning to better analyze customer journeys, get insights, predict behaviors and personalize communication

to improve customer retention. Digitalization will change the buying behavior much more towards e-commerce and self-service consultation with the support of sales robots. Value can be created from data, which needs to be structured, analyzed and used for the individual customer engagement. Does this mean the end of the sales representative and solution sales? Value is not based solely on product dimensions, much more emotional value created counts during the decision making process. The new era of value-selling explains, how value can be made tangible by the value quotient and ways to generate rational and emotional ROI for customers through story-telling and relationship benefits. Value is always first on the buyer's mind and the new value-selling concept will dramatically improve your business and show how to respond to the customer of tomorrow. Thomas Menthe (MBA) is a sales expert, experienced seller, recognized speaker and author of many publications about customer value, new ways of selling, selling strategy, leadership and coaching. His best selling book Kundennutzen has sold thousands of copies and others are available in their 4th edition. He served global companies like Bearing Point, Canon, Carlsberg, Cisco Systems, Global Knowledge, KWS, Microsoft, RIM, Xerox and others.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse

control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.
