Asia is at a crossroads. It is the world's most populous region, it accounts for a rising share of global greenhouse gas emissions, and it is the region most vulnerable to climate risks. Low-Carbon Green Growth

in Asia: Policies and Practices recognizes that in order to develop the region, low-carbon green growth is imperative. The volume reviews low-carbon policy initiatives taken by Asian countries at the national, sectoral, and local levels while assessing their achievements, identifying the remaining gaps, and examining new opportunities. The volume notes that actions taken by several Asian countries to date have been both impressive and replicable and that the region's commitment to low-carbon green growth represents a move away from the old economic notion of "grow first and clean later." However, emerging Asia's carbon emissions remain high, and failure to act swiftly could increase

mitigation costs by two to five times and lock in a high-carbon footprint for decades to come.

Laundry Elsevier

For Cheryl Mendelson, laundering is the best part of housekeeping. It's full of physical pleasures—the look of favorite clothes restored to freshness and beauty, the tactile satisfaction of crisp linens in beautifully folded stacks. Good laundering preserves things you love and protects your pocketbook. It doesn't take much time or effort. What it takes is knowledge, and *Laundry* is the comprehensive, entertaining, and inspiring book on the art of laundering. Culled from the bestselling *Home Comforts*, with revised and updated information and a new introduction, *Laundry* is an indispensable guide to caring for all the cloth in one's home: from kitchen rags to bedding, hand-washables, and baby clothes to vintage linens. Mendelson offers detailed guidance on when to disregard labels, removing stains,

making environmentally informed choices, sewing, and storing clothing and fabrics. A much-needed antidote to the standard-issue how-to manual, *Laundry* celebrates the satisfactions of ironing, folding, and caring for clothes and linens. Both pragmatic and eloquent, Mendelson provides beginning and veteran homemakers with a seamless combination of reliable instruction, time-tested advice, and fascinating personal narrative. As a farm girl in Pennsylvania, Mendelson—who is a philosopher, lawyer, and professor, as well as a homemaker, wife, and mother—received a classic domestic education from her grandmothers, aunts, and mother. *Laundry* combines the best of the traditional lore they taught her with the latest in technical and scientific information. Writing with infectious love and respect for her subject, Mendelson is sure to instill in readers a newfound affection and appreciation for the art of laundering.

Mergent International Manual McGraw-Hill Prof Med/Tech

This engaging and clearly written textbook/reference provides a must-have introduction to the rapidly emerging interdisciplinary field of data science. It

focuses on the principles fundamental to becoming a good data scientist and the key skills needed to build systems for collecting, analyzing, and interpreting data. The Data Science Design Manual is a source of practical insights that highlights what really matters in analyzing data, and provides an intuitive understanding of how these core concepts can be used. The book does not emphasize any particular programming language or suite of data-analysis tools, focusing instead on high-level discussion of important design principles. This easy-to-read text ideally serves the needs of undergraduate and early graduate students embarking on an “Introduction to Data Science” course. It reveals how this discipline sits at the

intersection of statistics, computer science, and machine learning, with a distinct heft and character of its own. Freeze-drying is an important preservation technique for heat-sensitive pharmaceuticals and foods. Products are first frozen, then dried in a vacuum at low temperature by sublimation and desorption, rather than by the application of heat. The resulting items can be stored at room temperature for long periods. This informative text addresses both principles and practice in this area. The first chapter introduces freeze-drying. The authors then review the fundamentals of the technique, heat-mass transfer analyses, modelling of the drying process and the equipment employed.

Further chapters focus on freeze-drying of food, freeze-drying of pharmaceuticals and the protective agents and additives applied. The final chapter covers the important subjects of disinfection, sterilization and process validation. Freeze-drying of pharmaceutical and food products is an essential reference for food, pharmaceutical and refrigeration engineers and scientists with an interest in preservation techniques. It will also be of use to students in these fields. Addresses the principles and practices used in this important preservation technique Explains the fundamentals of heat-mass transfer analysis, modelling and the equipment used Discusses the importance of disinfection, sterilization and process validation

American mining & metallurgical manual

We have all heard of people talking about a doomsday, or watched the TV show Doomsday Preppers. We have heard people called "Preppers", or "What Iffers". People have been talking about some sort of "End of the World"

scenario, for decades. Even the United States government has many bunkers around the country, some of which have been bought by ordinary citizens and even preppers. Some of us are concerned something may happen sooner than later. I have heard more and more people talking about the possibility of an imminent disaster. Some people worry about different possible scenarios. For example; economic collapse, societal collapse, civil unrest, electromagnetic pulse, weather destruction, war, fire, nuclear attacks, terrorist attacks, fuel shortages, pandemics, geomagnetic reversal, etc. Many people are preparing for these scenarios of which they are concerned. It is estimated in the United States of America,

approximately ten percent of the population are Preppers to one degree or another. No one knows if or when, one or more problems will occur. There is no way to predict a specific occurrence or time factor, and my crystal ball broke, so I cannot help with your prognostication. The best we can do is to be prepared for any eventuality. This is why I personally (and many others) believe an underground concrete bunker is the best idea. As I will explain, this Bunker will give you the best protection possible for the most scenarios. One need not be a conspiracy theorist to be concerned. People may think "Doomsday Preppers", or "What Iffers", as we are often called, are "nut jobs." However, when TSHTF, we will be the ones who others will come to, since we will

be prepared.
