Over the past two decades, Nick Horrigan has built a quiet, safe life for himself, living as much under the radar as possible. But all of that shatters when, in the middle of the night, a SWAT team bursts into his apartment, grabs him and drags him to a waiting helicopter. A terrorist—someone Nick has never heard

of—has seized control of a nuclear reactor, threatening to blow it up. And the only person he'll talk to is Nick, promising to tell Nick the truth behind the events that shattered his life twenty years ago. At seventeen years old, Nick Horrigan made a deadly mistake—one that cost his stepfather his life, endangered his mother, and sent him into hiding for years. Now, what Nick discovers in that nuclear plant leaves him with only two choices—to start running again, or to fight and finally uncover the secrets that have held him hostage all these years. As Nick peels back layer after layer of lies and deception, buffeted between the buried horrors of the past and the deadly intrigues of the present, he finds his own life—and the lives of nearly everyone he loves—at risk. The Manusmriti, the social doctrine of yore, and the Bhagvad-Gita, the spiritual tome in vogue that lay down the discriminatory dharma (duties) of the four social classes (castes) have been the bugbears of the Hindu backward classes. However, to their chagrin, of late, as the latter is being mindlessly promoted even though the former was constitutionally debunked, they began advocating that it too should be dumped in a dustbin. Ironically, the improbability of their progenitor Krishna, the architect of the Gita, relegating his own ilk to the social margins failed to dawn upon these that Gita supposedly slights, even to this day! Thus, their intellectuals, instead of seeking to reclaim their priceless heritage, albeit after ridding its interpolative garbage, tend to rubbish it a la throwing the baby with the bathwater, and needless to say they must ponder. Also, it is high time that the Gita-class stop laying store by the self-aggrandizing verses in this Vyasa's classic, evidently inserted by their progenitors that came to bedevil the Hindu spiritual integrity and social harmony. Likewise, the grumblers of the dalit desertions must see the need for setting the Hindu house in order to prevent the fractious poaching by the Church, if not to facilitate the 'hoped for' return of the prodigals. So also those who take pride that Hinduism is the only religion that reckons all faith as true, should be concerned about the 'in vogue' Gita that belittles some of their caste fellows. Besides, this work beckons the feminists to reckon the second of the two interpolations from

it cited in the cover image that degrades them in unspeakable terms. It is hoped that this 'overdue' work, might lead the 'denied' castes as well as the favoured folks for an objective approach to the Gita 'as it is' which could dispel the misgivings of the former and the delusions of the latter, thereby bridging the Hindu emotional gulf with its abridged book that restores its original form. So, this is a must read for every Hindu, whether or not one concurs with its propositions, and likewise for the students of logic and reasoning.

Experimental Thinking Routledge  
Experimental political science has changed. In two short decades, it evolved from an emergent method to an accepted method to a primary method. The challenge now is to ensure that experimentalists design sound studies and implement them in ways that illuminate cause and effect. Ethical boundaries must also be respected, results interpreted in a transparent manner, and data and research materials must be shared to ensure others can build on what has been learned. This book explores the application of new designs; the introduction of novel data sources, measurement approaches, and statistical methods; the use of experiments in more areas; and discipline-wide discussions about the robustness, generalizability, and ethics of experiments in political science. By exploring these novel opportunities while also highlighting the concomitant challenges, this volume enables scholars and practitioners to conduct high-quality experiments that will make key contributions to knowledge.

Whole Green Catalog The Better Mom

This book is about abduction, 'the logic of Sherlock Holmes', and about how some kinds of abductive reasoning can be programmed in a computer. The work brings together Artificial Intelligence and philosophy of science and is rich with implications for other areas such as, psychology, medical informatics, and linguistics. It also has subtle implications for evidence evaluation in areas such as accident investigation, confirmation of scientific theories, law, diagnosis, and financial auditing. The book is about certainty and the logico-computational foundations of knowledge; it is about inference in perception, reasoning strategies, and building expert systems.
