Pigs are one of the most iconic but also paradoxical animals ever to have developed a relationship with humans. This relationship has been a long and varied one: from noble wild beast of the forest to mass produced farmyard animal; from a symbol of status and plenty to a widespread religious food taboo; from revered religious totem to a parodied symbol of filth and debauchery. Pigs and Humans brings together some of the key scholars whose research is highlighting the role wild and domestic pigs have played in human societies around the world over the last 10,000 years. The 22 contributors cover a broad and diverse range of temporal, geographical, and topical themes, grounded within the disciplines of archaeology, zoology, anthropology, and biology, as well as art history and history. They explore such areas as evolution and taxonomy, domestication and husbandry, ethnography, and ritual and art, and present some of the latest theories and methodological techniques. The volume as a whole is generously illustrated and will enhance our understanding of many of the issues regarding our complex and ever changing relationship with the pig.

Jodie Jackson is all at sea, in every sense. On a ferry bound for the Isle of Wight, she's leaving her London life, her career, and her husband behind. She'd like a chance to turn back the clocks, but she'll settle for some peace and quiet on her brother Bill's beautifully renovated houseboat: Summer Days. But from the moment Jodie steps aboard her new home, it's clear she'll struggle to keep herself to herself. If it isn't Marilyn, who does for Bill and is under strict instructions to look after Jodie, then it's Ned, the noisy sculptor on the next-door houseboat. Ned's wood carving is hard on the ears, but it's made up for by the fact that he's rather easy on the eyes. Bustled out of the boat by Marilyn and encouraged to explore with Ned, Jodie soon delights in her newfound freedom. But out of mind isn't out of sight, and when her old life comes knocking Jodie is forced to face reality.

Calcium plays an enormous and varied role in living systems now widely appreciated by clinicians. Calcium in Internal Medicine demonstrates the physiological significance of calcium in clinical medicine and discusses the abnormal calcium metabolism in disorders such as renal failure, hypertension, atherosclerosis and osteoporosis. Hirotohi Morii (Editor) linked the clinical use of vitamin D analogues in bone diseases, Yoshiaki Nishizawa (Editor) researched the connection between calcium metabolism and atherosclerosis and Shaul G. Massry (Editor) was the first to systematize the importance of excess PTH in chronic renal failure. In addition to these areas, Calcium in Internal Medicine covers basic physiology, pathophysiology, nutritional requirements and the role of calcium in the development and treatment of other various diseases. The importance of calcium and its regulatory systems is brought together in one publication providing a useful reference tool for internists, rheumatologists and endocrinologists.

This book examines how the study of human-animal relations can help us interpret archaeological evidence. An international range of contributors examines fishing, hunting and husbandry, slaughtering and butchering, ceremonial and ritual practices and techniques of deposition and disposal in traditional societies.

Topics covered include the theoretical potential of ethnographic research for zooarchaeology, the use of comparative analogies in the ethnographic and zooarchaeological records, the historical developments of ethnozoarchaeology and specific case studies selected from across the world. This broad geographic approach encompasses examples from different types of societies, ranging from hunter-gatherers to urban populations and from horticulturalists to traditional farmers and pastoralists. This book will be of interest to researchers in a range of fields, including anthropology, ethnohistory and zooarchaeology.

"Engineers create many of the inventions that shape our society, and as such they play a vital role in determining how we live. This new book does an outstanding job of filling in the knowledge and perspective that engineers must have to be good citizens in areas ranging from the environment, to intellectual property, to ensuring the health of the innovation ecosystem that has done so much for modern society. This is exactly the sort of book that engineers and those who work with them should read and discuss over pizza, coffee, or some other suitable, discussion-provoking consumable." —John L. Hennessy, president, Stanford University "Citizen Engineer is the bible for the new era of socially responsible engineering. It's an era where, as the authors show, engineers don't just need to know more, they need to be more. The work is an inspiration, an exhortation, and a practical how-to guide. All engineers concerned with the impact of their work—and that should be all engineers—must read this book."

—Hal Abelson, professor of computer science and engineering, MIT "Code is law. Finally, a map to responsible law making. This accessible and brilliant book should be required of every citizen, and especially, the new citizen lawmakers we call engineers."

—Lawrence Lessig, director, Safra Center for Ethics, Harvard University, and cofounder, Creative Commons Being an engineer today means being far more than an engineer. You need to consider not only the design requirements of your projects but the full impact of your work—from an ecological perspective, an intellectual property perspective, a business perspective, and a sociological perspective. And you must coordinate your efforts with many other engineers, sometimes hundreds of them. In short, we've entered an age that demands socially responsible engineering on a whole new scale: The era of the Citizen Engineer. This engaging and thought-provoking book, written by computer industry luminaries David Douglas and Greg Papadopoulos, focuses on two topics that are becoming vitally important in the day-to-day work of engineers: eco engineering and intellectual property (IP). Citizen Engineer also examines how and why the world of engineering has changed, and provides practical advice to help engineers of all types master the new era and start thinking like Citizen Engineers.

Domestication challenges our understanding of human-environment relationships because it blurs the dichotomy between what is artificial and what is natural. In domestication, biological evolution, environmental change, techniques and practices, anthropological trajectories and sociocultural choices are inextricably interconnected. Domestication is essentially a hybrid phenomenon that needs to be

explored with hybrid scientific approaches. Hybrid Communities:

Biosocial Approaches to Domestication and Other Trans-species Relationships attempts for the first time to explore domestication viewed from across disciplines both in its origins and as an ongoing process.

This edited collection proposes new biosocial approaches and concepts which integrate the methods of social sciences, archaeology and biology to shed new light on domestication in diachrony and in synchrony. This book will be of great interest to all scholars working on human-environment relationships, and should also attract readers from the fields of social anthropology, archaeology, genetics, ecology, botany, zoology, history and philosophy.

Sadakichi Hartmann was born on the artificial island of Dejima, Nagasaki, to a Japanese mother, who died soon after childbirth, and a German father. He was raised in Germany and came to Philadelphia in 1882. Two years after arriving, at the age of seventeen, he paid his first visit to Walt Whitman, now sixty-five years old, who was living modestly just across the Delaware River, in Camden. Fascinated by the poet's life and work, Sadakichi would visit Whitman several times over the course of six years, to talk about literature and to question the poet about contemporary authors and books. Sadakichi went on to publish Whitman's opinions first in the New York Herald, in 1880, arousing the indignation of many and making him unpopular with the admirers of the poet, and later, in 1885, in Conversations with Walt Whitman.

JT Twissel artfully mixes mystery, conspiracy theories, the supernatural, and Native American folklore with a sardonic wit and ambitious search for the truth to take the reader on a journey with a cast of colorful characters that begins--and ends--with a found Civil War journal. The year is 1978 when former psychoanalyst Fiona Butters is sent to a notorious reformatory for girls in the middle of the Nevada desert by "Mr. Las Vegas"--her powerful and persuasive boss--to check on his daughter's welfare after a counselor inexplicably disappears. The reluctant Butters is suddenly thrust into the unintended role of private investigator in a search for answers to questions she doesn't yet know to ask. A junk food junkie with a knack for rubbing people the wrong way, Butters encounters evasion by the reformatory Head Mistress, roadblocks by the authorities, and a "handler" compliments of Mr. Las Vegas--a surly alcoholic who would rather spend his time in the local bars. It isn't until Butters forms an unlikely alliance with a button-down professor and an eccentric WWII veteran with a penchant for alliteration and sexual innuendo that she begins to

learn the secrets of the desert. An intriguing adventure with lots of plot twists, Flipka will entertain and engage with the irreverent and quirky, as well as raise provocative and timeless questions of what government doesn't tell...and why.
