Sadakichi Hartmann was born on the artificial island of Dejima, Nagasaki, to a Japanese mother, who died soon after childbirth, and a German father. He was raised in Germany and came to Philadelphia in 1882. Two years after arriving, at the age of seventeen, he paid his first visit to Walt Whitman, now sixty-five years old, who was living modestly just across the Delaware River, in Camden. Fascinated by the poet's life and work, Sadakichi would visit Whitman several times over the course of six years, to talk about literature and to question the poet about contemporary authors and books. Sadakichi went on to publish Whitman's opinions first in the New York Herald, in 1880, arousing the indignation of many and making him unpopular with the admirers of the poet, and later, in 1885, in *Conversations with Walt Whitman*.

Economic archaeology is the study of how past peoples exploited animals

and plants, using as evidence the remains of those animals and plants. The animal side is usually termed zooarchaeology, the plant side archaeobotany. What distinguishes them from other studies of ancient animals and plants is that their ultimate aim is to find out about human behaviour – the animal and plant remains are a means to this end. The 33 papers present a wide array of topics covering many areas of archaeological interest. Aspects of method and theory, animal bone identification, human palaeopathology, prehistoric animal utilisation in South America, and the study of dog cemeteries are covered. The long-running controversy over the milking of animals and the use of dairy products by humans is discussed as is the ecological impact of hunting by farmers, with studies from Serbia and Syria. For Britain, coverage extends from Mesolithic Star Carr, via the origins of agriculture and the farmers of Lismore Fields, through considerations of the Neolithic and Bronze Age. Outside Britain, papers discuss Neolithic subsistence in Cyprus and Croatia, Iron Age society in Spain, Medieval and post-medieval animal utilisation in northern Russia, and the claimed finding of a modern red deer skeleton in Egypt's Eastern Desert. In exploring these themes, this volume celebrates the life and work of Tony Legge (zoo)archaeologist and teacher. **Passage to India** University of Iowa Press
Calcium plays an enormous and varied role in living systems now widely appreciated by clinicians. *Calcium in Internal Medicine* demonstrates the physiological significance of calcium in clinical medicine and discusses the abnormal calcium metabolism in disorders such as renal failure, hypertension, atherosclerosis and osteoporosis. Hirotoshi Morii (Editor) linked the clinical use of vitamin D analogues in bone diseases, Yoshiki Nishizawa (Editor) researched the connection between calcium metabolism and atherosclerosis and Shaul G. Massry (Editor) was the first to systematize the importance of excess PTH in chronic renal failure. In

addition to these areas, Calcium in Internal Medicine covers basic physiology, pathophysiology, nutritional requirements and the role of calcium in the development and treatment of other various diseases. The importance of calcium and its regulatory systems is brought together in one publication providing a useful reference tool for internists, rheumatologists and endocrinologists.

Raising a Small Flock of Sheep Routledge Domestication challenges our understanding of human-environment relationships because it blurs the dichotomy between what is artificial and what is natural. In domestication, biological evolution, environmental change, techniques and practices, anthropological trajectories and sociocultural choices are inextricably interconnected. Domestication is essentially a hybrid phenomenon that needs to be explored with hybrid scientific approaches. *Hybrid Communities: Biosocial Approaches to Domestication and Other Trans-species Relationships* attempts for the first time to explore domestication viewed from across disciplines both in its origins and as an ongoing process. This edited collection proposes new biosocial approaches and concepts which integrate the methods of social sciences, archaeology and biology to shed new light on domestication in diachrony and in synchrony. This book will be of great interest to all scholars working on human-environment relationships, and should also attract readers from the fields of social anthropology, archaeology, genetics, ecology, botany, zoology, history and philosophy.

Celebrating the various ethnic traditions that melded to create what we now call American literature, Whitman did his best to encourage an international reaction to his work. But even he would have been startled by the multitude of ways in which his call has been answered. By tracking this

wholehearted international response and reconceptualizing American literature, *Walt Whitman and the World* demonstrates how various cultures have appropriated an American writer who ceases to sound quite so narrowly American when he is read into other cultures' traditions.

This book examines how the study of human-animal relations can help us interpret archaeological evidence. An international range of contributors examines fishing, hunting and husbandry, slaughtering and butchering, ceremonial and ritual practices and techniques of deposition and disposal in traditional societies. Topics covered include the theoretical potential of ethnographic research for zooarchaeology, the use of comparative analogies in the ethnographic and zooarchaeological records, the historical developments of ethnozooarchaeology and specific case studies selected from across the world. This broad geographic approach encompasses examples from different types of societies, ranging from hunter-gatherers to urban populations and from horticulturalists to traditional farmers and pastoralists. This book will be of interest to researchers in a range of fields, including anthropology, ethnohistory and zooarchaeology.
