Android Phones for Beginners & Seniors Lulu.com We have once again tested security products for smartphones running Google's Android operating system. Our report covers details of the products made by leading manufacturers. Smartphones represent the future of modern communications. In 2013, more than 1 billion smartphones were sold, a further milestone in the advance of these devices<sup>1</sup>. A study published by Facebook emphasises the importance of smartphones in our lives; about 80% of users make use of their smartphone within 15 minutes of waking up each day. At the same time, the traditional function of a telephone is becoming less and less important. The high quality of integrated cameras means that the smartphone is increasingly used for photography. As well as with photos, users trust their devices with their most personal communications, such as Facebook, WhatsApp and email. This brings some risks with it, as such usage makes the smartphone interesting for criminals, who attempt to infect the device with malware or steal personal data. There is also the danger brought by phishing attacks. These days, the use of security software on a PC or laptop is seen as essential. However, many smartphone users do not yet have the same sense of responsibility, even though their devices store personal data, private photos, Internet banking information or even company data. As modern smartphones are often expensive to buy, they are also an attractive target for thieves. Top-quality smartphones cost several hundred Euros. As it is not possible to physically prevent them from being stolen, they must be made less attractive to thieves. Consequently, many of today's security products contain not only malware protection, but also highly developed theft-protection functions, which make the device less attractive to thieves (e.g. by locking the device), and help the owner to find it again.

Augmented and virtual reality (AR and VR) offer exciting opportunities for human computer interaction (HCI), the enhancement of places, and new business cases. Though VR is most popular for video games, especially among younger generations, AR and VR can also be used in applications that include military, medical, navigational, tourism, marketing, and maintenance uses. Research in these technologies along with 3D user interfaces has gained momentum in recent years and has solidified it as a staple technology for the foreseeable future. Multimedia and Sensory Input for Augmented, Mixed, and Virtual Reality includes a collection of business case studies covering a variety of topics related to AR, VR, and mixed reality (MR) including their use in possible applications. This book also touches on the diverse uses of AR and VR in many industries and discusses their importance, challenges, and opportunities. While discussing the use these technologies in sectors such as education, healthcare, and computer science, this book is ideal for computer scientists, engineers, practitioners, stakeholders, researchers, academicians, and students who are interested in the latest research on augmented, mixed, and virtual reality.

Why is it such a challenge to provide telecommunications to rural areas? High initial infrastructure investment, relative low call volumes, high maintenance costs due to harsh environments, cash box collection needs, cash security costs (for coin operated phones), card availability (for prepaid airtime systems), technical illiteracy, remote locations, and high transportation costs are just some of the impediments to providing rural telecommunications access. This manual is based on the experiences of the Village Phone Programmes in Bangladesh and Uganda. In rural villages where no telecommunications services have previously existed, the

programme provides cellular phones via a sustainable financing mechanism to poor entrepreneurs who use the phone to operate a business. Such has been the success that over 2,000 village phone businesses are now operating in remote villages of Uganda. This manual is a guideline for replicating the programme in a new country. It establishes a template for creating sustainable initiatives that bring telecommunications to the poor, create viable new businesses for micro-entrepreneurs, and expand the customer base for telecommunications companies.

With the rapid development of China and India as new economic powers in global competition, an obvious question is whether these emerging economies are great opportunities or threats. Whilst answers are bound to differ depending on one's perspective, it is increasingly clear that more local firms, especially local entrepreneurs, from these emerging economies will play a more critical role in global competition by becoming challengers to global incumbents. Indeed, the fact that the majority of their populations are at the bottom of the pyramid, and thus cannot afford products designed for the developed markets, has made these emerging economies fertile ground for developing and applying disruptive innovations. A novel mix of key attributes distinctive from those of established technologies or business models, disruptive innovations are typically inferior, yet affordable and "good-enough" products or services, which originate in lower-end market segments, but later move up to compete with those provided by incumbent firms. This book sheds new light on disruptive innovations both from and for the bottom of the pyramid in China and India, from the point of view of local entrepreneurs and international firms seeking to operate their businesses there. It covers both the theoretical and practical implications of disruptive innovation using conceptual frameworks alongside detailed case studies, whilst also providing a comparison of conditions and strategic options in India and China. Further, unlike existing studies, this book focuses on the neglected perspective of local challengers as the primary players, and in doing so reveals the extent to which the future landscape of global competition may be shaped by disruptive innovation, as well as its capacity to make the world "flatter" and more sustainable. This unique book will be valuable to both scholars and practitioners interested in disruptive innovation and those working in the fields of Asian studies, international business, economics and globalization.
