Analysis of Electrical Machines Wipf and Stock Publishers

This book is devoted to students, PhD students, postgraduates of electrical engineering, researchers, and scientists dealing with the analysis, design, and optimization of electrical machine properties. The purpose is to present methods used for the analysis of transients and steady-state conditions. In three chapters the following methods are presented: (1) a method in which the parameters (resistances and inductances) are calculated on the basis of geometrical dimensions and material properties made in the design process, (2) a method of general theory of electrical machines, in which the transients are investigated in two perpendicular axes, and (3) FEM, which is a mathematical method applied to electrical machines to investigate many of their properties.

In *Mary, Woman and Mother* Fr. Francis Moloney studies the New Testament's presentation of Mary's person and role. After indicating the limits and strengths of a biblical study of Mary, he examines the Marian texts from the Letter of Paul to the Galatians, the Gospels of Mark, Matthew, and Luke, the Acts of the Apostles, and the Gospel of John. She is above all a woman and a mother. This book shows that in recognizing Mary as God's place of encounter with all that is most beautiful among women and men, we will

gain access to the womanly,
maternal face of God.

What is assessment and how is it a cultural practice? How does failure to account for linguistic and cultural variation among students jeopardize

assessment validity? What is required to achieve cultural validity in assessment? This resource for practicing and prospective teachers – as well as others concerned with fair and valid assessment – provides a thorough grounding in relevant theory, research, and practice. The book lays out criteria for culturally valid assessment and recommends specific strategies that teachers can use to design and implement culturally valid classroom assessments. Assessment plays a powerful role in the process of education in the US and has a disproportionately negative impact on students who do not come from mainstream, middle-class backgrounds. Given the significance of testing in

education today, cultural validity in assessment is an urgent issue facing educators. This book is essential reading for addressing this important, relevant topic.

Subcortical Stroke is a new and fully revised edition of Lacunar and Other Subcortical Infarctions (OUP, 1995).

Stroke is one of the most common causes of death and subcortical stroke accounts for 20-30% of all cerebrovascular infarctions. Our

understanding of stroke processes in general, and subcortical stroke in particular, has advanced considerably in recent years. Research findings from the fields of neurochemistry, imaging and genetics have provided insight and input to our understanding of this condition, and this new edition provides an opportunity to describe these advances, and to relate the findings to the clinical expression, neural mechanism, prognosis and treatment of subcortical stroke. In addition, new subcortical syndromes such as CADASIL are covered, as is subcortical haemorrhage. This book presents a comprehensive and authoritative review of the field with contributions from the leading

international experts. Subcortical Stroke is for stroke physicians, neurologists and those researching cerebrovascular diseases.
