Hace ocho años, la Informática Forense era solo una asignatura en vías de desarrollo, apenas conocida entre la mayoría de los profesionales de la Criminalística, gestionada por muy pocos y casi aislada de las disciplinas que le dan razón de ser: el Derecho, la Criminalística y la Informática. En la presente publicación, el orden que mostramos no es antojadizo ni aleatorio, sino que indica un camino a seguir por todo aquel que desea desempeñarse como perito en la materia. Hoy el panorama ha cambiado -entre otras razones por la amplia difusión y recepción que tuvo el Manual de Informática Forense, ofrecido a los lectores por esta misma Editorial (2011)- y nuevamente nos encontramos con la Prof. Ing. María Elena Darahuge (práctica-procedimental) y el Prof. Ing. Luis Enrique Arellano González (desarrollo teórico-conceptual), quienes, con el auspicio de la Facultad Regional Avellaneda (Universidad Tecnológica Nacional), han

complementado la obra antedicha, ampliando sus alcances sobre los componentes informáticos móviles (iPod, iPad, tablet, teléfono a celular) y especificando temas de permanente actualidad, tales como la "cadena de custodia informático forense", que tanto ha dado que hablar en el entorno jurisprudencial durante el año 2012. Este Manual se integra al anterior a fin de brindar un instrumento organizado conceptual y procedimentalmente a los operadores del Derecho (jueces, funcionarios judiciales, abogados de la matrícula), ingenieros, licenciados y peritos en Informática, Sistemas o Computación, licenciados en Criminalística, profesionales y empresarios que aspiren a una visión clara y sencilla de la Problemática Informático Forense, para resolver situaciones cotidianas y darle soporte a sus decisiones. Esperamos que esta obra les proporcione la utilidad y claridad pretendidas.

Army Tactics, Techniques, and Procedures (ATTP) 3-39.20 is the manual for police intelligence operations (PIO) doctrine. This manual aligns with Field Manual (FM) 3-39, the Military Police Corps Regiment's keystone manual, and other Army and joint doctrine. Simultaneous operations that combine offensive, defensive, and stability or civil support operations are emphasized. PIO is a military police function that support the operations process and protection activities by providing exceptional police information and intelligence to enhance situational understanding, protection of the force, and homeland security (HLS). This manual emphasizes that PIO supports, enhances, and contributes to the commander's protection program and situational understanding by analyzing, integrating, and portraying relevant criminal threat and police information and intelligence that may affect the operational environment (OE). This threat information is gathered by military police Soldiers as they conduct military police functions and by other Army Soldiers, Service policing forces, multinational elements, and security forces. This manual is written for military police and United States Criminal Investigation Command (USACIDC) Soldiers and civilians conducting the PIO function. This manual is focused on establishing the framework of PIO, how PIO supports military police

and Army operations, and how to integrate PIO within the other four military police functions: Law and order (L&O), internment and resettlement (I/R), maneuver and mobility support (MMS), and area security (AS).

This volume introduces readers to the methodology of dynamic systems analysis, using mathematical modelling techniques as an aid to understanding biological phenomena. It creates an ability to appreciate current medical and biological literature, in which mathematical models are being used with increasing frequency, and provides an introduction to the more advanced techniques of systems science. Mathematical concepts are illustrated by reference to frequent biological examples. By the use of case studies drawn from physiology, the various levels of mathematical modelling which can be adopted are presented.

Trajan (AD 98-117) is one of the very few Roman emperors who has always been seen in a good light. Popular during his lifetime, by

the fourth century he had become the litmus test of imperial excellence. In the Middle Ages he was placed by Dante in the sixth sphere of Heaven among the Just and Temperate Rulers, and for Gibbon, Trajan's principate ushered in the Golden Age of the Roman Empire. In this the first comprehensive biography in English, Julian Bennett tests the substance of the emperor's glorious reputation. No ancient biography of Trajan survives and the period as a whole is singularly ill-served by the extant literary evidence. A thorough examination of the contemporary archaeological and epigraphic evidence supplements this inadequate written record and allows Dr Bennett to cover every major aspect of Trajan's reign. Dr Bennett's central conclusion is that Trajan's reign was indeed the apogee of the principate established by Augustus and his successors. It saw the birth of the 'imperial' - the full realization of the imperial system. Moreover, the emperor himself is seen as the pivotal character in this development. Trajan's contemporary reputation as Optimus Princeps seems to have been richly deserved. Switching to the Mac "O'Reilly Media, Inc."

This intelligence guide was prepared in response to requests from law enforcement executives for guidance in intelligence functions in a post-September 11 world. It will help law enforcement agencies develop or enhance their intelligence capacity and enable them to fight terrorism and other crimes while preserving community policing relationships. The world of law enforcement intelligence has changed dramatically since September 11, 2001. State, local, and tribal law enforcement agencies have been tasked with a variety of new responsibilities; intelligence is just one. In addition, the intelligence discipline has evolved significantly in recent years. As these various trends have merged, increasing numbers of American law enforcement agencies have begun to explore, and sometimes embrace, the intelligence function. This guide is intended to help them in this process. The guide is directed primarily toward state, local, and tribal law enforcement agencies of all sizes that need to develop or reinvigorate their intelligence function. Rather than being a manual to teach a person how to be an intelligence analyst, it is directed toward that manager, supervisor, or officer who is assigned to create an intelligence function. It is intended to provide ideas, definitions, concepts, policies, and resources. It is a primera place to start on a new managerial journey. Every law enforcement agency in the United States, regardless of agency size, must have the capacity to understand the implications of information collection, analysis, and intelligence sharing. Each agency must have an organized mechanism to receive and manage intelligence as well as a mechanism to report and share critical information with other law enforcement agencies. In addition, it is essential that law enforcement agencies develop lines of communication and information-sharing protocols with the private sector, particularly those related to the critical infrastructure, as well as with those private entities that are potential targets of terrorists and criminal enterprises. Not every agency has the staff or resources to create a formal intelligence unit, nor is it necessary in smaller agencies. This document will provide common language and processes to develop and employ an intelligence capacity in SLTLE agencies across the United States as well as articulate a uniform understanding of concepts, issues, and terminology for law enforcement intelligence (LEI). While terrorism issues are currently most pervasive in the current discussion of LEI, the principles of intelligence discussed in this document apply beyond terrorism and include organized crime and entrepreneurial crime of all forms. Drug trafficking and the associated crime of money laundering, for example, continue to be a significant challenge for law enforcement. Transnational computer crime, particularly Internet fraud, identity theft cartels, and global black marketeering of stolen and counterfeit goods, are entrepreneurial crime

problems that are increasingly being relegated to SLTLE agencies to investigate simply because of the volume of criminal incidents. Similarly, local law enforcement is being increasingly drawn into human trafficking and illegal immigration enterprises and the often associated crimes related to counterfeiting of official documents, such as passports, visas, driver's licenses, Social Security cards, and credit cards. All require an intelligence capacity for SLTLE, as does the continuation of historical organized crime activities such as auto theft, cargo theft, and virtually any other scheme that can produce profit for an organized criminal entity. To be effective, the law enforcement community must interpret intelligence-related language in a consistent manner. In addition, common standards, policies, and practices will help expedite intelligence sharing while at the same time protecting the privacy of citizens and preserving hard-won community policing relationships.~
