Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patients--sleep disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

Asia is at a crossroads. It is the world's most populous region, it accounts for a rising share of global greenhouse gas emissions, and it is the region most vulnerable to climate risks. Low-Carbon Green Growth in Asia: Policies and Practices recognizes that in order to develop the region, low-carbon green growth is imperative. The volume reviews low-carbon policy initiatives taken by Asian countries at the national, sectoral, and local levels while assessing their achievements, identifying the remaining gaps, and examining new opportunities. The volume notes that actions taken by several Asian countries to date have been both impressive and replicable and that the region's commitment to low-carbon green growth represents a move away from the old economic notion of "grow first and clean later." However, emerging Asia's carbon emissions remain high, and failure to act swiftly could increase mitigation costs by two to five times and lock in a high-carbon footprint for decades to come.

This publication provides an assessment of the carcinogenic hazards associated with exposure to seven chlorinated solvents, including trichloroethylene, tetrachloroethylene, and their metabolites (dichloroacetic acid, trichloroacetic acid, and chloral hydrate). All these agents were previously assessed by IARC Working Groups more than 10 years ago, and new epidemiological and mechanistic evidence has been considered in this reevaluation.

Trichloroethylene has been used in several industries, such as manufacture and repair of aircraft and automobiles, and in screw-cutting, while tetrachloroethylene is widely used in dry-cleaning and as a feedstock for the production of chlorinated chemicals.
