Birthday Oldewash Mothering is messy. Our joy and hope in raising children doesn't change the reality that being a mom can be frustrating, stressful, and tiring. But just as God is using us to shape our children, God is using our children and motherhood to shape us. In *The Better Mom*, author Ruth Schwenk, herself a mother of four children, encourages us with the good news that there is more to being a mom than the extremes of striving for perfection or simply embracing the mess. We don't need to settle for surviving our kids'

childhood. We can grow through it. With refreshing and heartfelt honesty Ruth emboldens moms to: Find freedom and walk confidently in purpose Create a God-honoring home environment Overcome unhealthy and destructive emotions such as anger, anxiety, and more Avoid glorifying the mess of mom-ing or idolizing perfection Cultivate life-giving friendships At the heart of *The Better Mom* is the message that Jesus calls us to live not a weary life, but a worthy life. We don't have to settle for either being apathetic or struggling to be

perfect. Both visions of motherhood go too far. Ruth offers a better option. She says, "It's okay to come as we are, but what we're called to do and be is far too important to stay there! The way to becoming a better mom starts not with what we are doing, but with who God is inviting us to become."

Hampton-Brown Books

A forensic examination of Australian life, this insightful book suggests that contemporary society has lost touch with its communities and its people. Written from an economist's

perspective and based on organizational membership records and surveys, it presents the reasons why the social fabric has begun to fray and outlines the necessary steps to create a better civic and personal life.

Distilling various aspects of Australian routine--including religion, sport, and employment--this book reveals what is being lost and how to get it back.

Low-Carbon Green Growth in Asia
UNSW Press
"Africa: An Introduction invites you in to discover Africa: a continent rich with culture and history, with diverse populations stretching

from the dense tropical rain forest of the Congo basin, right up to the Sahara Desert in the north, and down to the Mediterranean climates of the far south. Containing fifty-five countries, and covering over 20% of the world's landmass, Africa is the birthplace of humanity, yet the image of Africa in the west is often negative, that of a continent riddled with endemic problems. This accessible and engaging guide to the African continent guides the reader through the history, geography and politics of Africa. It ranges from the impact of slavery and imperialism through to the rise of African nationalism and the achievement of independence, and up to the present moment.

Key topics covered include literature, art, technology, religion, the condition of African women, health, education, and the mounting environmental concerns faced by African people. As Africa moves beyond the painful legacies of slavery and imperialism, this book provides an engaging, uplifting and accessible introduction to a rapidly modernising and diverse continent. Suitable for high school and undergraduate students studying Africa, this book will also serve as the perfect introduction for anyone looking to understand the history of Africa, and the Africa of today"--

Asia is at a crossroads. It is the world's most populous region, it accounts for a rising share of global greenhouse gas emissions, and it is the region most vulnerable to climate risks. Low-Carbon Green Growth in Asia: Policies and Practices recognizes that in

order to develop the region, low-carbon green growth is imperative. The volume reviews low-carbon policy initiatives taken by Asian countries at the national, sectoral, and local levels while assessing their achievements, identifying the remaining gaps, and examining

new opportunities. The volume notes that actions taken by several Asian countries to date have been both impressive and replicable and that the region's commitment to low-carbon growth represents a move away from the old economic notion of "grow first and clean later." However, emerging Asia's carbon emissions remain high, and failure to act swiftly could increase mitigation costs by two to five times and lock in a high-carbon footprint for decades to come. *How to Clean Practically Anything* Lulu.com History of the sewing machine is an unchanged, high-quality reprint of

Abductive Inference
McGraw Hill Professional
This book is about abduction, 'the logic of Sherlock Holmes', and about how some kinds of abductive reasoning can be programmed

in a computer. The work brings together Artificial Intelligence and philosophy of science and is rich with implications for other areas such as, psychology, medical informatics, and linguistics. It also has subtle implications for evidence evaluation in areas such as

accident investigation, confirmation of scientific theories, law, diagnosis, and financial auditing. The book is about certainty and the logical foundations of knowledge; it is about inference in perception, reasoning strategies, and building expert systems.
