Oceans cover over 70% of the planet and profoundly influence many crucial physical and biological processes. Life began in the sea, and two thirds of the major forms of animal life are either primarily or exclusively marine. About half of the human population lives within 200 km of the coast. Thus, the oceans are a crucial component of planetary health (including human health) by any conceivable standard.

life on ocean planet chapter 4 Flashcards and Study Sets ...

Earth's oceans are teeming with life, which creates changes in ocean color that are visible from space. Tiny plants, phytoplankton, bloom for hundreds of miles, coloring the oceans and giving us clues about complex marine ecosystems. Driven by wind, temperature, salinity, and other forces, currents on the ocean surface cover our planet.
