Choice Recommended Read
Leo B. Hendry is one of the foremost developmental psychologists of his generation. His diverse range of interests have included studies on young people ' s involvement in competitive sports, investigations into teacher and pupil relations in school, adolescents ' leisure pursuits and their family

relations, parenting styles, youth workers and mentoring, youth unemployment, adolescent health behaviours, and transition to early adulthood. His research interests now include work on ageing and retirement. Developmental Transitions across the Lifespan is the first collection of Hendry ' s works, and essentially joins the dots to provide an overarching perspective on lifespan development through a dynamic systems theory approach. Underpinned by empirical research, this collection of journal articles and book chapters is linked by a contemporary commentary which not only contextualises each piece within today ' s research climate, but builds to provides an unorthodox, comprehensive but above all

compelling perspective on human development from childhood to old age. Leo B. Hendry ' s research output has been significant and influential. This is an important book that will provide students and researchers in developmental psychology not only with an opportunity to view his contribution holistically, but in connecting his range of research interests, provides a new contribution to our understanding of lifespan development in its own right.

Psychology Press

Comprised of papers written
by members of the Social
Science Research Council

Subcommittee on Child Development in Life-Span Perspective, this book provides a representation of the current status of the relation between child development and the life-span. It suggests the possible synthesis of these two fields from both conceptual and empirical evidence. Theories and methods concerning the social, psychological, and anatomical influences on children's cognitive development through adolescence are highlighted.

Publications

Award-winning author Tara Kuther presents Lifespan Development in Context, Second Edition, a topically oriented edition of her bestselling text that provides a panoramic view of the many influences

that shape human development. Kuther's student-friendly narrative illustrates how the places, sociocultural environments, and ways in which we are raised influence who we become and how we grow and change throughout our lives. Three core themes resonate throughout each chapter and across each developmental domain and topic: the centrality of context, the importance of research, and the applied value of developmental science. Foundational theories and classic studies are woven together with contemporary research and culturally

diverse perspectives for a full, updated introduction to the field that is both comprehensive and concise. Case studies, real-world applications, and video examples ignite critical thinking and class discussion, ensuring students have the tools they need to apply course concepts to their lives and future careers.

case studies shaped by the contributions of real students to build immersive examples that readers can relate to and enjoy. Bundle Case Studies in Lifespan Development with Lifespan Development: Lives in Context for only \$5 more! Handbook of Parenting and Child Development Across the Lifespan Psychology Press This special issue covers different aspects of life course development. The central argument of the first paper is that human development should be viewed as the product of the interpenetration of cultural and biological processes. The

following article outlines how current sociology constructs life courses. The notion of developmental biocultural co-constructivism and specifically the zone within which human development can be expressed is the focus of the third paper.

Next, a developmental account of civic engagement and political participation is provided. Finally, the special issue concludes with a paper marking individual differences in patterns of rhesus monkey biobehavioral development through the life span.

Elsevier

Recipient of the 2017 Most Promising New Textbook Award from the Textbook & Academic Authors Association (TAA)

Chronologically organized, *Lifespan Development: Lives in Context* offers a unique perspective on the field by focusing on the importance of context—examining how the places, sociocultural environments, and ways in which we are raised influence who we become and how we grow and change. Author Tara L. Kuther integrates cutting-edge and classic research throughout the text to present a unified story of developmental science and its applications to everyday life. Robust pedagogy, student-friendly writing, and an inviting design enhance this exciting and inclusive exploration of the ways in which context informs our understanding of the

lifespan.

PSYCHOLOGY:
METHODOLOGICAL
ISSUES- PAPERS
PRESENTED AT THE
2ND CONFERENCE-
WEST VIRGINIA
UNIVERSITY. Elsevier

Life-Span Developmental Psychology: Historical and Generational Effects provides theoretical and methodological frameworks and examples in history-graded influences on life-span development. The book is a compilation of select research papers by sociologists and psychologists in the study of the biological and environmental

determinants of development. The topics discussed in the text include the historical and cohort effects; the aims, methods, and problems of research on historical constancy and change; the relationships between history-graded events and normative age-graded (ontogenetic) events; and the investigation of the developing individual in a changing world. Empirical samples of history-graded influence studies of various age cohorts from the United States and other countries are presented as well. Psychologists and sociologists will find the book very

insightful.

Action and Self-Development SAGE Publications

Life-Span Developmental Psychology:

Methodological Issues is based on a conference, held at West Virginia University in 1971, that focused on the general topic of Life-Span Developmental Psychology. The conference provided a forum for the discussion of a variety of methodological issues related to the study of developmental processes over the life-span. The principal objectives of the Life-Span Conference have been not only to explicate, by successive approximation, the range of empirical phenomena with which a life-span developmental psychology should be concerned, but also to explore issues.

LIFE-SPAN
DEVELOPMENTAL

PSYCHOLOGY

Psychology Press

This handbook

presents the latest

theories and findings

on parenting, from the

evolving roles and

tasks of childrearing to

insights from

neuroscience,

prevention science, and

genetics. Chapters

explore the various

processes through

which parents

influence the lives of

their children, as well

as the effects of

parenting on specific

areas of child

development, such as

language,

communication,

cognition, emotion,

sibling and peer

relationships,

schooling, and health.

Chapters also explore

the determinants of

parenting, including

consideration of

biological factors,

parental self-regulation

and mental health,

cultural and religious

factors, and stressful

and complex social

conditions such as

poverty, work-related

separation, and divorce.

In addition, the

handbook provides

evidence supporting the

implementation of

parenting programs

such as

prevention/early

intervention and

treatments for

established issues. The

handbook addresses

the complementary role

of universal and

targeted parenting

programs, the economic

benefits of investment

in parenting programs, and concludes with future directions for research and practice.

Topics featured in the Handbook include:

- The role of fathers in supporting children's development.

- Developmental disabilities and their effect on parenting and child development.

- Child characteristics and their reciprocal effects on parenting.

- Long-distance parenting and its impact on families.

- The shifting dynamic of parenting and adult-child relationships.

- The effects of trauma, such as natural disasters, war exposure, and forced displacement on parenting. The

Handbook of Parenting and Child Development Across the Lifespan is an essential reference for researchers, graduate students, clinicians, and therapists and professionals in clinical child and school psychology, social work, pediatrics, developmental psychology, family studies, child and adolescent psychiatry, and special education.

Lifespan Development

Psychology Press

In *The Essentials of Lifespan Development*, best-selling author Tara L. Kuther examines the ways in which contexts—culture, society, socioeconomic status, home, family, and even community—impact each stage of a person's life. With its chronological organization, highly

relatable examples, and vivid cross-cultural stories, Kuther connects the latest cutting-edge research to learners' experiences and interdisciplinary career aspirations. Integrated examples; routine critical thinking questions; and a 16-chapter organization helps make the book engaging and accessible for all students. This title is accompanied by a complete teaching and learning package.

Life-span Perspectives on Health and Illness Springer Science & Business Media Life-Span Developmental Psychology: Personality and Socialization presents papers on personality and socialization. The book discusses the history, theory, and psychological approaches of developmental psychology, with focus on socialization and personality development through the life span; personality dimensions; and theories of

socialization and sex-role development. The text also describes the life-span perspective of creativity and cognitive styles; continuities in childhood and adult moral development revisited; and issues of intergenerational relations as they affect both individual socialization and continuity of culture.

The interactional analysis of family attachments; social-learning theory as a framework for the study of adult personality development; person-perception research; and the perception of life-span development are also considered. The book further tackles the potential usefulness of the life-span developmental perspective in education; the strategies for enhancing human development over the life span through educational intervention; and some ecological implications for the organization of human intervention throughout the

life span. Developmental psychologists, sociologists, gerontologists, and people involved in the study of child development will find the book invaluable.

Life-span Developmental Psychology Academic Press

"This book is unique because of the focus on longitudinal studies and international perspectives . . . There is no other book like it . . . This book will be useful both as an advanced undergraduate or graduate course text and as a resource for scholars." - Rosemary Blieszner, Virginia Polytechnic Institute and State University "A very strong volume . . . [T]his book will clearly be a must-have for scholars interested in midlife." - Michael Marsiske, University of

Florida "Midlife is no longer an uncharted territory in human development. A group of outstanding researchers from different countries focuses on this peak period in the life span . . . Various views, including historical, cultural, and socio-structural perspectives, are adopted . . . [C]omprehensive reviews of studies on almost all relevant domains of human development . . . are given and provide a colorful picture of what midlife in these days may be all about." - Sigrun-Heide Filipp, University of Trier, Germany Middle adulthood is a critical period of the life course. How we develop in middle age – the central period of our lives – can influence how well we cope in our later years.

Middle Adulthood: A Lifespan Perspective explores these issues by bringing together a distinguished group of international contributors associated with a range of prestigious longitudinal studies. Key Features: Presents a much-needed longitudinal, lifespan perspective on middle age Provides a multicultural perspective to determine universal normative patterns of midlife development Addresses a broad scope of topics, including historical perspectives on the emergence of middle age as a normative developmental period in the life course, change and stability in personality, and cognitive development and decline Middle Adulthood is designed for scholars, researchers, and practitioners in the field of adult development and aging. It is an excellent text for advanced undergraduate and graduate students studying midlife development in the departments of Developmental Psychology, Human Development and Family Studies, Gerontology, Family Diversity, and Health.

The Essentials of Lifespan Development
SAGE Publications

The combined features that distinguish this text from other titles can be summarized with an acronym: CARE C utting edge research A pplied developmental science R eadability E ssential knowledge W ritten by respected child,

adolescent, and adulthood development experts, this authoritative and chronologically organized text presents an integrated perspective on lifespan development. The authors write in an engaging manner, synthesizing biological, social, cultural, and socioeconomic influences as opposed to organizing content around developmental themes. Incorporation of classic and cutting-edge research includes extensive coverage of new research in developmental neuroscience, which has transformed the study of lifespan development by introducing brain

maturation. At the same time, the text emphasizes the application of developmental psychology to real world problems, focusing on the ways in which knowledge of child development can inform social policy and practice in the fields of child care, education, mental health, and family life. The text also examines the many fascinating changes that take place through adulthood to help students answer the important question: Who will I become tomorrow? And with a separate epilogue that focuses on death and dying, the book takes students on a developmental journey

from our first breath to our last. Reflecting the authors' combined expertise, the broad array of real-life examples resonate with students from different backgrounds and fields of study, and with different occupational goals in mind. With its distinctive and effective combination of cutting-edge research, applications, readability, and essential knowledge, this text helps students understand and appreciate what today's scientists are discovering about human development across the lifespan, how they study the process, and how this knowledge can be used to improve the lives of infants, children, adolescents, and adults around the world.

Life-Span
Developmental
Psychology: Normative
Life Crises is a
compilation of papers
that deals with various
points of view between
the academic
perspective — studies
in developmental
psychology and applied
perspective — and the
practical efforts of
social workers to help
individual clients. Part I
discusses normative
life crises from the two
perspectives that
include human behavior
theory in social work
education. This part
also includes an
interdisciplinary

approach covering developmental, social, sociological, economic, and psychological fields. Part II covers the normative life crises in individual development such as discussions on death, ego development, and a practitioner's response on models of ego development. The book also discusses an abstract model versus an actual individual experience in dealing with crises, as well as the meanings of adaptation and survival during old age. Part III presents the normative life crises in the family circle covering topics such as parenthood, sex roles, depression, widowhood, and an example of situational

stress. Part IV deals with the normative life crises and the social system, including socialization, life course, changing work cycles, and public policy on death. This book will prove valuable for psychologists, psychiatrists, sociologists, social workers, and behavioral scientists.
