This e-book details the most interesting and important characteristics of the automobiles, car maintenance, styling features, car body style, the standard classification of the cars, an history of the automobiles, introduction in the automotive industry, and the traffic code, rules and signs. An automobile, usually called a car (an old word for carriage) or a truck, is a wheeled vehicle that carries its own engine. Older terms include horseless carriage and motor car, with "motor" referring to what is now usually called the engine. It has seats for the driver and, almost without exception, for at least one passenger. The automobile was hailed as an environmental improvement over horses when it was first introduced. Before its introduction, in New York City, over 10,000 tons of manure had to be removed from the streets daily. However, in 2006 the automobile is one of the primary sources of worldwide air pollution and cause of substantial noise and health effects.

Now in paperback, with a new foreword by Fred Krupp, an expert's illuminating preview of the cleaner, lighter, smarter cars of the future. In *Driving the Future*, Margo T. Oge portrays a future where clean, intelligent vehicles with lighter frames and alternative power trains will produce zero emissions and run at 100+ mpg. With electronic architectures more like those of airplanes, cars will be smarter and safer, will park themselves, and will network with other vehicles on the road to drive themselves. As the director of the EPA's Office of Transportation and Air Quality, Oge was the chief architect behind the Obama administration's landmark 2012 deal with automakers in the US market to double the fuel efficiency of their fleets and to cut greenhouse gas emissions in half by 2025. This was America's first formal climate action using regulation to reduce emissions through innovation in car design. Offering an insider account of the partnership between federal agencies,

California, environmental groups, and car manufacturers that led to the historic deal, Margo discusses the science of climate change, the politics of addressing it, and the lessons learned for policy makers. She also takes the reader through the convergence of macro trends that will drive this innovation over the next forty years and be every bit as transformative as those wrought by Karl Benz and Henry Ford. *Driving the Future* is for anyone who wants to know what car they'll be driving in ten, twenty, or thirty years—and for everyone concerned about air quality and climate change now.

A landmark history of postwar America and the second volume in the *Penguin History of the United States* series, edited by Eric Foner In this momentous work, acclaimed labor historian Joshua B. Freeman presents an epic portrait of the United States in the latter half of the twentieth century, revealing a nation galvanized by change even as conflict seethed within its borders. Beginning in 1945, he charts the astounding rise of the labor movement and its pitched struggle with the bastions of American capitalism in the 1940s and '50s, untangling the complicated threads between the workers' agenda and that of the civil rights and women's movements. Through the lens of civil rights, the Cold War struggle, and the labor movement, *American Empire* teaches us something profound about our past while illuminating the issues that continue to animate American political discourse today.

The #1 New York Times–bestselling author takes on subjects from banking to bitcoin:

“Another winner from an A-list humorist.”

?Booklist Sharp-witted satirist and author of *Parliament of Whores* P. J. O’Rourke takes on his scariest subjects yet—business, investment, finance, and the political chicanery behind them. Want to get rich overnight for free in three easy steps with no risk? Then don’t buy this book.

(Actually, if you believe there’s a book that can do that, you shouldn’t buy any books because you probably can’t read.) P. J.

O’Rourke’s approach to business, investment, and finance is different. He takes the risks for you in his chapter “How I Learned Economics by Watching People Try to Kill Each Other.” He proposes “A Way to Raise Taxes That We’ll All Love”—a 200% tax on celebrities. He offers a brief history of economic transitions before exploring the world of high tech innovation with a chapter on “Unnovations,” which asks, “The Internet—whose idea was it to put all the idiots on earth in touch with each other?” He misunderstands bitcoin, which seems “like a weird scam invented by strange geeks with weaponized slide rules in the high school Evil Math Club.” And finally, he offers a fanciful short story about the morning that P. J. wakes up and finds that all the world’s goods and services are free!
