MIG (metal inert gas) welding, also known as gas metal arc welding (GMAW), is a key joining technology in manufacturing. MIG welding guide provides a comprehensive, practical and accessible guide to this widely used process. Part one discusses the range of technologies used in MIG welding, including power sources, shielding gases and consumables. Fluxed cored arc welding, pulsed MIG welding and MIG brazing are also explored. Part two reviews quality and safety issues such as improving productivity in MIG/MAG welding, assessing weld quality, health and safety, and methods for reducing costs. The final part of the book takes a practical look at the applications of MIG welding, with chapters dedicated to the welding of steel and aluminium, the use of robotics in MIG welding, and

the application of MIG welding in the automotive industry. MIG welding guide is essential reading for welding and production engineers, designers and all those involved in manufacturing. Provides extensive coverage on gas metal arc welding, a key process in industrial manufacturing User friendly in its language and layout Looks at the practical applications of MIG welding

NOTE: NO FURTHER DISCOUNT FOR THIS PRINTED PRODUCT- OVERSTOCK SALE -- Significantly reduced list price Engineers at War describes the role of military engineers, especially the U.S. Army Corps of Engineers, in the Vietnam War. It is a story of the engineers' battle against an elusive and determined enemy in one of the harshest underdeveloped regions of the world. Despite these challenges, engineer soldiers successfully carried out their combat and construction missions. The building effort in South Vietnam allowed the United States to deploy and operate a modern 500,000-man force in a far-off region. Although the engineers faced huge construction tasks, they were always ready to support the combat troops. They built ports and depots, carved airfields and airstrips out of jungle and mountain plateaus, repaired roads and bridges, and constructed bases. Because of these efforts, ground combat troops with their supporting engineers were able to fight the enemy from well-established bases. Although most of the construction was temporary, more durable facilities, such as airfields, port and depot complexes, headquarters buildings, communications facilities, and an improved highway system, were intended to serve as economic assets for South Vietnam. This volume covers how the engineers grew from a few advisory detachments to a force of more than 10 percent of the Army troops serving in South Vietnam. The 35th Engineer Group began arriving in large numbers in June 1965 to begin transforming Cam Ranh Bay into a major port, airfield, and depot complex. Within a few years, the Army engineers had expanded to a command, two brigades, six groups, twenty-eight construction and combat battalions, and many smaller units. From the Foreword: This volume focuses on that second and longer campaign. But rather than a narrative of the overall course of the conflict, it provides a soldier's-eye view of the war by focusing on detailed accounts of selected engagements. Each illustrates the everyday challenges that America's soldiers faced in a difficult struggle against an inventive and often elusive enemy. Weapons, doctrine, and procedures developed to fight a conventional campaign against a similar opposing force had to be adapted to fit a different type of conflict. The U.S. Army's combat and support forces brought both resourcefulness and resilience to this task while continuing to demonstrate the same courage shown by previous generations fighting the nation's battles. These stories not only symbolize the tip of the spear formed by units in contact, but they also represent the contributions of all American men and women who have served their country in Operation Iraqi Freedom. Taken together, these accounts will provide our deploying leaders and soldiers a better understanding of the environment that they will encounter and prepare them for the work that must be done.
