toward linear algebra. Working with curved lines and curved surfaces, the first step is always to linearize. Replace the curve by its tangent line, fit the surface by a plane, and the problem becomes linear. The power of this subject comes when you have ten variables, or 1000 variables, instead of two.

25% of chapter openers are new, providing applications of linear algebra and the motivation for developing the mathematics that follows. Chapter 8, *The Geometry of Vector Spaces*, has been added to the text. Sections include *Affine Combinations*, *Affine Independence*, *Convex Combinations*, *Hyperplanes*, *Polytopes*, and *Curves and Surfaces*.
