Something deadly is coming for the werewolves who live in the desert town of Hadley... BITTEN BY DECEIT Alpha wolf Emma Parker is loyal to a fault, even if it means losing the love of her life when he's

ousted from the pack. She's never stopped needing him, and when a black witch curses the pack, she wonders if she'll even survive. It's a poison of the blood, and with each bite, the virus spreads, leaving the infected rabid and under the control of an evil Alpha. Kyle Benton is starting over. He's a lone wolf, betrayed by the only woman he's ever loved. Until Emma barges back into his life, as gorgeous and determined as ever. He's hell bent on resisting her, or at least making her suffer. But she needs him in a way that touches him to his very soul. Now he has to determine how to set her free, and if he can, how he can ever let her go.

BITTEN BY TREACHERY It's not like Charly the witch wanted to betray the Hadley werewolves. Or infiltrate the pack. But it's the only way to save her mother and protect her coven from a dark evil. She's a witch in wolf's clothing - until an unfortunate bite forces her to become the one thing she detests the most. The last time a witch came to Hadley, she almost destroyed Trenton's pack. He won't let it happen again, especially now that this lone wolf is feeling so drawn to a certain new new girl in town. Charly is the most intriguing woman he's ever met, and he wants to know all about her. The passion between Charly and Trenton shocks them both, but can she trust him with her secret...and her heart? One thing is for certain: she has to tell him the truth soon - before it brings about the end of both Trenton and the innocent citizens of Hadley.

BITTEN BY VENGEANCE

Cursed witch Nevena wants nothing more than to destroy the dark evil that has escaped her coven's compound. She's outgunned and on her own--until a band of werewolves from Hadley join in the fight. Drew is a cop bent on protecting his pack. Hadley has been attacked again, leaving him bitter and determined to do what's right. He will help the witches bring down what drove them to Hadley, but he refuses to get close to them...Until the curse on Nevena sucks him in. Drew discovers what its like to love when Nevena traps both his heart and his soul. But he may lose them both in order to bring down the dark evil determined to destroy everything in its path.

An Engineering Approach
Prentice Hall
Design of Steel Structures

is designed to meet the requirements of undergraduate students of civil and structural engineering. This book will also prove useful for postgraduate students and serve as an invaluable reference for practicing engineers unfamiliar with the limit state design of steel structures. The book provides an extensive coverage of the design of steel structures in accordance with the latest code of practice for general construction in steel (IS 800 : 2007). The book is based on the modern limit state approach to design and covers topics such as properties of steel, types of steel structures, important areas of structural steel technology, bolted connections, welded connections, design of trusses, design of plate girders, and design of beam columns. Each chapter features solved examples, review questions, and

practice problems as well as blurred pages, poor pictures, ample illustrations to supplement the text.

Email Security with Cisco IronPort thoroughly illuminates the security and performance challenges associated with today's messaging environments and shows you how to systematically anticipate and

respond to them using Cisco's IronPort Email Security Appliance (ESA).

Going far beyond any IronPort user guide, leading Cisco expert Chris Porter shows you how to use IronPort to construct a robust, secure, high-performance email architecture that can resist future attacks. Email Security with Cisco IronPort presents specific, proven architecture recommendations for deploying IronPort ESAs in diverse environments to optimize reliability and automatically handle failure. The author offers specific recipes for solving a wide range of messaging security

problems, and he demonstrates how to use both basic and advanced features--including several hidden and undocumented commands. The author addresses issues ranging from directory integration to performance monitoring and optimization, and he offers powerful insights into often-ignored email security issues, such as preventing "bounce blowback."	Solutions Architect at Cisco, focuses on the technical aspects of Cisco IronPort customer engagements. He has more than 12 years of experience in applications, computing, and security in finance, government, Fortune® 1000, entertainment, and higher education markets. •Understand how the Cisco IronPort ESA addresses the key challenges of email security •Select the best network deployment model for your environment, and walk through successful installation and configuration •Configure and optimize Cisco IronPort ESA's powerful security,
