Scholarly journals are the capillaries of the scientific world, ensuring the circulation of knowledge.

Moreover, scholarly journals guide and indicate the scientific development in an academic field of study or in a country. Scholarly journals, which transfer and spread scientific information, are intended to properly fulfill their functions, preventing the transfer of imperfect or incorrect information to the science world. Significant issues are, therefore, inevitable in the characteristics of scientific studies in such disciplines and countries where the scholarly journals do not fulfill their functions properly. This study

encompasses all scholarly journals published in Turkey in all fields of science and other disciplines. The reference questions in this study are grouped under three main categories: the contact and publication information, article evaluation, and publishing information. The number of journals in this present study totals 1,910.

Handbook on Research Assessment in the Social Sciences Academic Press

Anyone who doubts that astronomy is enjoying a golden age has only to browse the pages of *Organizations and Strategies in Astronomy*, Vol. 5. Our golden age is defined not only by the enormity of new discoveries of dark energy, dark matter, extra-solar planets, and the evolution of Mars, but also by the breadth, diversity, and creativity within our community. This volume records our history, in a period of such rapid change and growth that individual astronomers are hard-pressed to keep abreast of their own fields and neighborhoods, much less of developments world-wide. Since the 1950's, changes in the landscape of astronomy are manifold. We have witnessed two epochs of big telescope construction, the 4-meter class telescopes of the '60s and '70s and the 8-to 10-meter class telescopes of the '90s, continuing

through today. We accomplished the transition from photographic to digital data, and we continue to improve the size and sensitivity of astronomical detectors. We have witnessed the flowering of radio astronomy and the opening of the full electromagnetic spectrum through space astronomy. We have seen the growth of national and international astronomy facilities, and a dramatic broadening of the accessibility of data, both through observing facilities available through open competition based on scientific merit and through deep, rich archives of data.

This book covers all essential aspects of writing scientific research articles, presenting eighteen carefully selected titles that offer essential, "must-know" content on how to write high-quality articles. The book also addresses other, rarely discussed areas of scientific writing including dealing with rejected manuscripts, the reviewer's perspective as to what they expect in a scientific article, plagiarism, copyright issues, and ethical standards in publishing scientific papers. Simplicity is the book's hallmark, and it aims to provide an accessible, comprehensive and essential resource for those seeking guidance on how to publish their research work. The importance of publishing research work cannot be overemphasized. However, a major

limitation in publishing work in a scientific journal is the lack of information on or experience with scientific writing and publishing. Young faculty and trainees who are starting their research career are in need of a comprehensive guide that provides all essential components of scientific writing and aids them in getting their research work published.

How to Get Published in the Best Entrepreneurship Journals Routledge

Experienced economics editors discuss navigating the world of scholarly journals, with details on submission, reviews, acceptance, rejection, and editorial policy. Editors of academic journals are often the top scholars in their fields. They are charged with managing the flow of hundreds of manuscripts each year—from submission to review to rejection or acceptance—all while continuing their own scholarly pursuits. Tenure decisions often turn on who has published what in which journals, but editors can accept only a fraction of the papers submitted. In this book, past and present editors of economics journals discuss navigating the world of academic journals. Their contributions offer essential reading for anyone who has ever submitted a paper, served as a referee or associate editor, edited a journal—or read an article and wondered why it was published. The editors describe their experiences at journals that range from the American Economic Review to the Journal of

Sports Economics. The issues they examine include late referee reports, slow resubmission of manuscripts, and plagiarism—as well as the difficulties of “herding cats” and the benefits of husband-wife editorial partnerships. They consider the role of the editor, as gatekeeper or developer of content; and they advise authors to write more carefully and clearly, to include citations that locate their articles in the context of the existing literature, and to update their work after it has been submitted and rejected elsewhere. The chapters also offer a timely, insider's perspective on the general effectiveness of the system of academic journals in economics. Contributors Richard V. Adkisson, Richard G. Anderson, William A. Scientific communication depends primarily on publishing in journals. The most important indicator to determine the influence of a journal is the Impact Factor. Since this factor only measures the average number of citations per article in a certain time window, it can be argued that it does not reflect the actual value of a periodical. This book defines five dimensions, which build a framework for a multidimensional method of journal evaluation. The author is winner of the Eugene Garfield Doctoral
