Review of Inter-rater Reliability in the Literature

Inter-rater reliability is calculated as the raw agreement rate between the original abstractor and the re-abstractor. For example, if the module contains 100 data elements and the abstractors agree on 90 of them, the reliability score would be 90 percent. The inter-rater reliability is the aggregate agreement rate across all Inter-Rater Reliability Policy for Utilization Management ...

This tutorial looks at using a coding comparison query in NVivo to conduct inter-rater reliability testing with multiple coders. It looks at for key areas: The concept Logging users into NVivo ...
