Small Engines: Operation and Maintenance

Small Gas Engines

One in seven Americans is employed in some capacity by

the automotive industry, and the number of cars and other vehicles on our roads is rising steadily.

Forgotten Pieces of Georgia Simon and Schuster

Engine Repair, published as part of the CDX Master Automotive Technician Series, provides students with the technical background, diagnostic strategies, and repair procedures they need to successfully repair engines in the shop. Focused on a “strategy-based diagnostics” approach, this book helps students master diagnosis in order to properly resolve the customer concern on the first attempt.

Forgotten Pieces of Georgia: The Northwest Counties documents the abandoned small business

buildings throughout the state. By carefully documenting as many buildings as possible while obtaining accurate historical information, this book seeks to raise awareness to the plight of small businesses not only in Georgia, but in the United States as a whole. As humankind constantly changes and evolves, alongside technology and "progress," we do not consider how this rapid change affects the small business owners in our local, county, and state communities. Some small businesses can specialize in niche markets like small engine repair or landscaping, but others--such as small "mom-and-pop" stores, gas stations, or hardware stores--are forced out of business by larger box store chains. Other small businesses, such as textile companies, can be forced out by bad decisions on the part of politicians who regulate companies to death or make it impossible to compete in a fair market. We tend to forget the United States was built by the small business owner, whether they were fur traders and farmers

in the early days or general stores and retail stores through the late 1990s. Humankind must continue to move forward, but not at the expense of our small businesses and local communities.

As the world economy continues to evolve, businesses and

industries must adopt new practices and processes in order to survive.

Quality and cost control, work teams and participatory management, and an infusion of technology are transforming the way people work and do business.

Employees are now expected to read, write, and communicate effectively; think creatively, solve problems, and make decisions; and interact with each other and the technologies in the workplace. Vocational-technical programs must also adopt these

practices in order to provide graduates who can enter and advance in the changing work world. The curriculum framework in this document reflects these changes in the workplace and a number of other factors that impact on local vocational-technical programs. Small Engine and Turf Equipment Repair Technology is designed to provide students with entry level skills needed to compete in today's turf equipment industry. Training is provided in the areas of Engine Repair, Diagnostic

Unfortunately, most visitors to Alaska have but a few days to explore. As a result, much goes unseen and unknown. Gain the visions you missed by hitchhiking along with my recollections of a ten year foray into the Last Frontier. Drive the Alaska Highway, taking side trips to Dawson City and Valdez. Stalk moose and catch salmon with Athabascan Indians who still follow a subsistence way of life. Observe an Inupiaq whale hunt on the Arctic Ocean. Visit the rural neighborhood where dog sledding heroes,

such as Lance Mackey and Ken Anderson, live and practice their sport. Fly by bush plane into remote camps and live with exploration teams. See how frontier boom towns, like Fairbanks and Nome, as well as Native villages, are evolving. These and many more exciting adventures await. You can't see Alaska in a few days. But you can experience it through my eyes and Far North Adventure.

This book is one mans

attempt to make peace with a world that was on the brink of mutually agreed upon destruction. He chose a bicycle as his medium of expression and named it Friend. His intent was to go from California and head east until going to The Soviet Union. He wanted to meet Soviets and show others that they were alright. He made it as far as East Germany but was not allowed travel any farther east. From there the traveling cyclist headed for the Mediterranean and the Middle East. And then onward around the world. He ran out of money after one year of traveling. He traveled across large continents like Australi and China and circumvented the Philippines, Taiwan,
