Small and large telescopes are being installed all around the world. Astronomers have thus acquired better access to more modern equipment; not in the least to photometers, which are very important tools for the contemporary observer. This development of higher quality and more sensitive equipment makes it very necessary to improve the accuracy of the measurements. This guide helps the astronomer and astronomy student to improve the quality of their photometric measurements and to extract a maximum of information from their observations. The book is based on the authors' observing experience, spending numerous nights behind various instruments at many different observatories.

Tim Winton's characters are ordinary people who battle to maintain loyalty against all odds; women, children, men whose relationships strain under pressure and leave them bewildered, hoping, sometimes fleeing, but often finding strength in forgotten parts of themselves. 'Like Hemingway, Winton writes prose in which you can hear the thumping of the heart of the long-distance swimmer, or the rasping heaving breath of the asthmatic.' Times on Sunday 'A poignant collection of spare, understated tales about ordinary people battling to preserve the relationships they treasure in the face of many troubles.' Cleo 'Shows more clearly than anybody ever has how catastrophe, suffering and love can survive together in one little room.' Los Angeles Times

When you took statistics in school, your instructor gave you specially prepared datasets, told you what analyses to perform, and checked your work to see if it was correct. Once you left the class, though, you were on your own. Did you know how to create and prepare a dataset for analysis? Did you know how to select and generate appropriate graphics and statistics? Did you wonder why you were forced to take the class and when you would ever use what you learned? That's where "Stats with Cats" can help you out. The book will show you: How to decide what you should put in

your dataset and how to arrange the data. How to decide what graphs and statistics to produce for your data. How you can create a statistical model to answer your data analysis questions. The book also provides enough feline support to minimize any stress you may experience. Charles Kufs has been crunching numbers for over thirty years, first as a hydrogeologist, and since the 1990s as a statistician. My lady, Fiammetta Bianchini, was plucking her eyebrows and biting

color into her lips when the unthinkable happened and the Holy Roman Emperor's army blew a hole in the wall of God's eternal city, letting in a flood of half-starved, half-crazed troops bent on pillage and punishment. Thus begins *In the Company of the Courtesan*, Sarah Dunant's epic novel of life in Renaissance Italy. Escaping the sack of Rome in 1527, with their stomachs churning on the jewels they have swallowed, the courtesan Fiammetta and her dwarf companion, Bucino, head for Venice, the shimmering city born out of water to become a miracle of east-west trade: rich and rancid, pious and profitable, beautiful and squalid. With a mix of courage and cunning they infiltrate Venetian society. Together they make the perfect partnership: the sharp-tongued, sharp-witted dwarf, and his vibrant mistress, trained from birth to charm, entertain, and satisfy men who have the money to support her. Yet as their fortunes rise, this perfect partnership comes under threat, from the searing passion of a lover who wants more than his allotted nights to the attentions of an admiring Turk in search of human novelties for his sultan's court. But Fiammetta and Bucino's greatest challenge comes from a young crippled woman, a blind healer who insinuates herself into their lives and hearts with devastating consequences for them all. A story of desire and deception, sin and religion, loyalty and friendship, *In the Company of the Courtesan* paints a portrait of one of the world's greatest cities at its most potent moment in history: It is a picture that remains vivid long after the final page.
