An Inspiring Guide to Self-sufficiency iUniverse

This book should prove most helpful as a "how to" guide for a man working alone to build a strong, yet simple log cabin made to last. It can be a log cabin that a man can be proud to call his home or for a getaway home away from home on the weekend. I built the 13 by 41 foot cabin shell, including cutting down the trees and peeling off the bark, in three months while camping out in a tent. Cutting down the trees and piling off the bark took more than half of the time in completing the shell of the cabin. It was hard work, but by using the trees on my property I saved money and it gave me a more satisfying feeling of accomplishment as I lived my dream. After about three months work the cabin was up and we moved from our tents into the cabin, however, the electrical wiring, well and plumbing, septic system, interior walls,

chimney, and 8 by 28 foot add-on, which are covered in varying details (less on the wiring and plumbing) in this book, were worked on as I got the time and money. Overall, to complete the cabin, it took about four to five months time. The 757 square foot cabin was completed in about four months by working long hours, six days a week. The long camping experience was an ordeal for my wife, but my son and I enjoyed it. We thank God for His help and guidance through it all. The plans contained in this book are designed to allow a man working alone to build a cabin in a short time that will last a life time. I include an additional chapter about building a pergola type patio cover out of red cedar. 48 pictures are included in this book. Happy trails!
