The search for a distinct "terrorist profile" has been going on for many years, and while it is generally agreed that nobody is born a terrorist, there is plenty of disagreement about why a person might become one. Whereas personal and situational push and pull factors can be combined to determine how and why young people become involved in terrorism, preventing an individual from following a path that ends in violence without moral restraint poses an enormous

challenge, especially in an open society. This book presents papers from the NATO Advanced Research Workshop titled "A Review of the Utility of Existing Terrorism Risk Assessment Instruments and Policies: Is there the Need for Possible New Approaches?", held in Berlin, Germany, on 29-30 November 2019. Researchers were asked to present papers for discussion sessions with invited participants and practitioners from a number of NATO member and partner countries. Various assessment instruments for identifying problematic individuals at an early stage were presented by experts. It was generally agreed that, due to cultural, religious and other differences, there is no simple way to identify the relatively few high-risk individuals among the larger population of politically radicalized but not necessarily violent individuals who pose no threat. Framed by an Introduction and Conclusion, the 16 chapters in the book are divided into three parts: Theory and Risk/Threat Assessment Instrument Policy Themes; Implementation of Politically Motivated Terrorism Protocols; and Personality Traits/Disorders, Anti-State Terrorism Profiles and the DSM-5 Personality Trait Instrument. This practice-oriented book will be of interest to all those tasked with protecting society from some of its most dangerous members. User Guide to Hydrology Abrams

This book presents a review of research on reaction processes and attention as it has evolved over the last 40 years in the context of the information processing tradition in cognitive psychology. It is argued and demonstrated that issues of reaction processes and attention are closely interconnected. Their common conceptualization can be seen in terms of limited processing capacity on the one hand, and stage analysis on the other. This volume concludes that, at present, a stage analysis metaphor offers better prospects as a conceptual starting point; the limited capacity metaphor was strongly tied to the digital computers of the 60s. The emphasis of the book is on behavioral research, but summaries of related findings on evoked potentials and other psychophysiological variables are included as well. From this perspective, it may be of interest to neuropsychologists who want to learn about the present state of cognitive experimental paradigms. Elements of Human Performance also addresses the question of the relationship between basic research and applications in the said areas. This is particularly urgent in view of the now common notion that the results of many simplified laboratory tasks may be artifactual and of little applied value. A back-to-back research strategy is outlined to assess the validity of basic research results for real-life tasks.

Third International Edition (March, 2014) In this concise and provocative guide to owning a woman, author Logan Alexander details the vital elements of possessing a female in the most extreme ways. The formal manual covers the aspects of introducing a woman to ownership, daily rituals, mental ownership, breaking in a woman, discipline, body modification, oral training and sexual gratification training. Author's Note: "The spirit of this manual is guided by the intense urge of a man to possess a woman in the deepest of ways. For some individuals, a normal relationship devoid of the extreme polarities of emotional, psychological and sexual experience that merge in dominance and submission play is akin to a death sentence of mediocrity. He wants her and her body so fully that he wants to make her his actual physical property. She wants to be craved and desired so badly that she wants to be made his real human possession. In a post-feminist world, women chose to be owned and self-made men want to own their women in fresh new ways. They reject traditional relationships and long for a kind of cosmic completeness that transforms daily life into rituals of kinetic connection and deviant eroticism. The manual is written primarily as a concise guide for men seeking to own a woman and women seeking to be owned by a man within a certain creative space of the BDSM realm. It is not a general relationship guide for every Dominant-submissive couple in the scene. It is inspired by the same masculine creative energies that gave rise to confrontational works of art and ancient traditions of phallic worship. It is but one subjective vision of living a life of creative control with a woman. It includes both broad strokes and extremely particular ideas. Yet, it also serves as a source of inspiration for men and women in any relationship as the desire to possess and be possessed is universal, even if it is only a small force within the complex dynamics of a normal relationship. Regular people have always fed on the excessive proclivities of those on the fringe of society and reality. The style of this work is formal for it is meant as a thought-provoking source from which to draw ideas and inspire fresh deviance. It is not, though, a how-to-guide on sophisticated rope tying techniques, ways of spanking, types of bondage or other technical BDSM skills. Real world experiences are included from first-hand experiences and direct conversations with men who own women and women who are owned by men. The practices are meant as ideal extremes of ownership to be used as one desires in the dynamic reality of an individual relationship."
