Imagine a class where students are actively and personally engaged in thinking critically

while also discovering how to apply those thinking skills in everyday life. Now imagine those same students confidently participating in class, working efficiently through the exercises outside class, and performing better in the course. With Connect Critical Thinking, students can achieve this success. Connect Critical Thinking is a first: a learning program with pedagogical tools that are anchored in research on critical thinking. Along with Moore & Parker's engaging writing style and the wealth of topical exercises and examples that are relevant to students' lives, Connect Critical Thinking helps ensure that students can come to class confident and prepared. What other course provides students with skills they can apply so broadly to success in school and success in life?

Logic and Contemporary Rhetoric: The Use of Reason in Everyday Life Routledge
Widely praised,
ARGUMENTATION AND DEBATE, 13E, uses a clear, concise, and engaging

presentation that makes even complex material easy for students to understand. The authors have adapted the text over the years to match changing practices in debate and teaching while preserving classical and conventional approaches to learning debate. This edition retains its rhetorical roots with a flexible tone open to a diverse array of debate styles that is appropriate in the contemporary context. It values the importance of inclusion and sensitivity to differences of culture, gender, orientation, class and other factors as they impact communicative choices and argumentation. The authors have a preference for team topic evidence-based policy debate; however, the text strives to offer viable tools for a wide range of readers interested in improving their critical thinking for reasoned decision making. This book develops the idea that since decolonisation, regional patterns of security have become more prominent in international politics. The authors combine an operational theory of regional security with an empirical application across the whole of the international system.

Individual chapters cover Africa, the Balkans, CIS Europe, East Asia, EU Europe, the Middle East, North America, South America, and South Asia. The main focus is on the post-Cold

War period, but the history of each regional security complex is traced back to its beginnings. By relating the regional dynamics of security to current debates about the global power structure, the authors unfold a distinctive interpretation of post-Cold War international security, avoiding both the extreme oversimplifications of the unipolar view, and the extreme deterritorialisations of many globalist visions of a new world disorder. Their framework brings out the radical diversity of security dynamics in different parts of the world.

Critical Thinking provides language teachers with a dynamic framework for encouraging critical thinking skills in explicit, systematic ways during their lessons. With the proliferation of fallacious arguments, "fake news," and untrustworthy sources in today's multimedia landscape, critical thinking skills are vital not only in one's native language, but

also when engaged in the task of language learning. Written with the language teacher in mind, this book provides a springboard for teaching critical thinking skills in multicultural, multilingual classrooms. Suitable for graduate students, in-training teachers, and language curriculum developers interested in purposeful applications of critical thinking pedagogy for the second-language classroom, this volume presents classroom activities, suggestions for lesson planning, and ideas for researching the impact of critical thinking activities with second-language learners. This book is ideal as an invaluable resource for teacher-directed classroom investigations as well as graduate dissertation projects.

Anonymous' and Stephanus' commentaries, written in the 12th century AD, are the first surviving commentaries on Aristotle's Rhetoric. Their study, including the environment in which they were written and the philosophical ideas expressed in them, provides a better understanding of the reception of Aristotle's Rhetoric in Byzantium, the Byzantine practice of commenting on classical texts, and what can be called "Byzantine philosophy". For the first time, this book explores the context of production of the commentaries, discusses the identity and features of their authors, and reveals their philosophical and

philological significance. In particular, I examine the main topics discussed by Aristotle in the *Rhetoric* as contributing to persuasion, namely valid and fallacious rhetorical arguments, ethical notions, emotional response and style, and I analyse the commentators' interpretations of these topics. In this analysis, I focus on highlighting the value of the philosophical views expressed, and on creating a discussion between the Byzantine and the modern interpretations of the treatise. Conclusively, the two commentators need to be considered as independent thinkers, who aimed primarily at integrating the treatise within the Aristotelian philosophical system.

Hugh Blair, George Campbell, and Richard Whately, whose works were first published in the late 18th and early 19th centuries, constituted the great triumvirate of British Rhetoricians. For 20 years, earlier printings of this book, which contains substantial excerpts comprising the most significant portions of their writings, have been widely used as textbooks in history-of-rhetoric courses. An increasing interest in rhetoric at the college level has created a renewed demand for reprints of such classic primary texts. The Preface places the three rhetoricians within the context of the rhetorical tradition, which began in 5th-century BCE Greece. The bibliographies have been updated to include 20th-century scholarly work on Blair, Campbell, and Whately, and on the 18th- and 19th-century rhetorical movement. Biographical sketches of Blair,

Campbell, and Whately are also elegant prose, this text guides provided.

The Communication Playbook Bedford/St. Martin's

The work of Galileo has long been important not only as a foundation of modern physics but also as a model - and perhaps the paradigmatic model - of scientific method, and therefore

as a leading example of scientific rationality. However, as we know, the matter is not so simple. The range of Galileo readings is so varied that one may be led to the conclusion that it is a case of chacun a son Galileo; that here, as with the Bible, or Plato or Kant or Freud or Finnegans Wake, the texts themselves underdetermine just what moral is to be pointed. But if there is no canonical reading, how can the texts be taken as evidence or example of a canonical view of scientific rationality, as in Galileo? Or is it the case, instead, that we decide a priori what the norms of rationality are and then pick through texts to find those which satisfy these norms? Specifically, how and on what grounds are we to accept or reject scientific theories, or scientific reasoning? If we are to do this on the basis of historical analysis of how, in fact, theories came to be accepted or rejected, how shall we distinguish 'is' from 'ought'? What follows (if anything does) from such analysis or reconstruction about how theories ought to be accepted or rejected? Maurice Finocchiaro's

study of Galileo brings an important and original approach to the question of scientific rationality by way of a systematic read

A vital contribution to legal theory and media and civic discourse In the 1860s, northern newspapers attacked Abraham Lincoln's policies by attacking his character, using the terms "drunk," "baboon," "too slow," "foolish," and "dishonest." Political argumentation has steadily increased since then and the argumentum ad hominem, or personal attack argument, has now been carefully refined as an instrument of "oppositional tactics" and "going negative" by the public relations experts who design political campaigns at the national level. In this definitive treatment of one

of the most important concepts in argumentation theory and informal logic, Douglas Walton presents a normative framework for identifying and evaluating ad hominem or personal attack arguments. Personal attack arguments have often proved to be so effective, in election campaigns, for example, that even while condemning them, politicians have not stopped using them. In the media, in the courtroom, and in everyday confrontation, ad hominem arguments are easy to put forward as accusations, are difficult to refute, and often have an extremely powerful effect on persuading an audience. Walton gives a clear method for analyzing and evaluating cases of ad hominem arguments found in everyday argumentation. His analysis classifies the ad hominem

argument into five clearly defined subtypes—abusive (direct), circumstantial, bias, “poisoning the well,” and tu quoque (“you’re just as bad”) arguments—and gives methods for evaluating each type. Each subtype is given a well-defined form as a recognizable type of argument. The numerous case studies show in concrete terms many practical aspects of how to use textual evidence to identify and analyze fallacies and to evaluate argumentation as fallacious or not in particular cases.
