A perennial bestseller by eminent mathematician G. Polya, *How to Solve It* will show anyone in any field how to think straight. In lucid and appealing prose, Polya reveals how the mathematical method of demonstrating a proof or finding an unknown can be of help in attacking any problem that can be "reasoned" out—from building a bridge to winning a game of anagrams. Generations of readers have relished Polya's deft—indeed, brilliant—instructions on stripping away irrelevancies and going straight to the heart of the problem.

The increase in prevalence and visibility of sexually gender diverse (SGD) populations illuminates the need for greater understanding of the ways in which current laws, systems, and programs affect their well-being. Individuals who identify as lesbian, gay, bisexual, asexual, transgender, non-binary, queer, or intersex, as well as those who express same-sex or -gender attractions or behaviors, will have experiences across their life course that differ from those of cisgender and heterosexual individuals. Characteristics such as age, race and ethnicity, and geographic location intersect to play a distinct role in the challenges and opportunities SGD people face. Understanding the Well-Being of LGBTQI+ Populations reviews the available evidence and identifies future research needs related to the well-being of SGD populations across the life course. This report focuses on eight domains of well-being; the effects of various laws and the legal system on SGD populations; the effects of various public policies and structural stigma; community and civic engagement; families and social relationships; education, including school climate and level of attainment; economic experiences (e.g., employment, compensation, and housing); physical and mental health; and health care access and gender-affirming interventions. The recommendations of *Understanding the Well-Being of LGBTQI+ Populations* aim to identify opportunities to advance understanding of how individuals experience sexuality and gender and how sexual orientation, gender identity, and intersex status affect SGD people over the life course.

In this politically and democratically urgent collection, George Yancy and contributors argue that more than ever, we are in need of classrooms that function "dangerously"—that is, classrooms where people are not afraid to engage in critical discussions that call into question difficult political times. Collectively they demonstrate the ways activist authors and scholars must be prepared to engage in risk and vulnerability as a defense of our democratic right to practice forms of pedagogical transgression. Ideal for scholars and students of critical pedagogy, philosophy of education, and political theory, this collection delineates the necessity of critical consciousness through education, and provides ways of speaking back against authoritarian control of imaginative and critical capacities.

This book is the culmination of nearly six years of research initiated by Fred Cate and Jim Dempsey to examine national practices and laws regarding systematic government access to personal information held by private-sector companies. Leading an effort sponsored by The Privacy Projects, they commissioned a series of country reports, asking national experts to uncover what they could about government demands on telecommunications providers and other private-sector companies to disclose bulk information about their customers. Their initial research found disturbing indications of systematic access in countries around the world. These data collection programs, often undertaken in the name of national security, were cloaked in secrecy and largely immune from oversight, posing serious threats to personal privacy. After the Snowden leaks confirmed these initial findings, the project morphed into something more ambitious: an effort to explore what should be the rules for government access to private-sector data, and how companies should respond to government demands for access. This book contains twelve updated country reports plus eleven analytic chapters that present descriptive and normative frameworks for assessing national surveillance laws, survey evolving international law and human rights principles applicable to government surveillance, and describe oversight mechanisms. It also explores the concept of accountability and the role of encryption in shaping the surveillance debate. Cate and Dempsey conclude by offering recommendations for both governments and industry.

This book analyzes the Tea Party and Occupy Wall Street as symptoms of the structural crisis of US capitalism and its class structure. It shows that the protests have to be understood as rooted in the petty bourgeoisie's lived experience of crisis, which also plays a crucial role in current political developments like the successful presidential campaign of Donald Trump. The book explains the Great Recession as an acute phase of the structural crisis of the finance-dominated accumulation regime, identifies the social classes from which the core-participants of the respective protests recruited themselves and the socioeconomic developments to which they were exposed in the years leading up to the protests, and interprets interviews and group discussions conducted with activists to reconstruct the habitus that structured both their experience of the crisis and their resonance with the respective protest practices. It thereby provides an encompassing understanding of the social logics not only of these social movements, but of the current political conjuncture in the US.

"Education is in crisis—at least, so we hear. And at the center of this crisis is technology. New technologies like computer-based classroom instruction, online K–12 schools, MOOCs (massive open online courses), and automated essay scoring (AES) may be our last great hope—or the greatest threat we have ever faced. In *The Problem with Education Technology*, Ben Fink and Robin Brown look behind the hype to explain the problems—and potential—of these technologies. Focusing on the case of automated essay scoring, they explain the technology, how it works, and what it does and doesn't do. They explain its origins, its evolution (both in the classroom and in our culture), and the controversy that surrounds it. Most significantly, they expose the real problem—the complicity of teachers and curriculum-builders in creating an education system so mechanical that machines can in fact often replace humans—and how teachers, students, and other citizens can work together to solve it. Offering a new perspective on the change that educators can hope, organize, and lobby for, *The Problem with Education Technology* challenges teachers and activists on "our side," even as it provides new evidence to counter the profit-making, labor-saving logics that drive the current push for technology in the classroom."

The story of West Indian immigrants to the United States is generally considered to be a great success. Mary Waters, however, tells a very different story. She finds that the values that gain first-generation immigrants initial success—a willingness to work hard, a lack of attention to racism, a desire for education, an incentive to save—are undermined by the realities of life and race relations in the United States. Contrary to long-held beliefs, Waters finds, those who resist Americanization are most likely to succeed economically, especially in the second generation.

This collection of essays focusses on the following concepts: sovereignty (the unique, intangible and yet essential characteristic of states), statehood (what it means to be a state, and the process of acquiring or losing statehood) and state responsibility (the legal component of what being a state entails). The unifying theme is that they have always been and will in the future continue to form a crucial part of the foundations of public international law. While many publications focus on new actors in international law such as international organisations, individuals, companies, NGOs and even humanity as a whole, this book offers a timely, thought-provoking and innovative reappraisal of the core actors on the international stage: states. It includes reflections on the interactions between states and non-state actors and on how increasing participation by and recognition of the latter within international law has impacted upon the role and attributes of statehood.

Are Russian propaganda or "fake news" entrepreneurs on Facebook undermining our sense of a shared reality? A conventional wisdom has emerged since the election of Donald Trump in 2016 that new technologies and their manipulation by foreign actors played a decisive role in his victory and are responsible for the sense of a "post-truth" moment in which disinformation and propaganda thrives. Network Propaganda challenges that received wisdom through the most comprehensive study yet published on media coverage of American presidential politics from the start of the election cycle in April 2015 to the one year anniversary of the Trump presidency. Analysing millions of news stories together with Twitter and Facebook shares, broadcast television and YouTube, the book provides a comprehensive overview of the architecture of contemporary American political communications. Through data analysis and detailed qualitative case studies of coverage of immigration, Clinton scandals, and the Trump Russia investigation, the book finds that the right-wing media ecosystem operates fundamentally differently than the rest of the media environment. The authors argue that longstanding institutional, political, and cultural patterns in American politics interacted with technological change since the 1970s to create a propaganda feedback loop in American conservative media. This dynamic has marginalized centre-right media and politicians, radicalized the right wing ecosystem, and rendered it susceptible to propaganda efforts, foreign and domestic. For readers outside the United States, the book offers a new perspective and methods for diagnosing the sources of, and potential solutions for, the perceived global crisis of democratic politics.

From the virulence of fake news to the rise of psychographic profiling, emotion has become ascendant. The new frontier of capitalization is not outward, but inward—the inner life of affect and emotion, desire and disposition. This book lays that new reality out with a series of close case studies. A new set of technologies are emerging, from facial coding to affective computing, that attempt to

render the emotional into the machine-readable. At the same time, social media and smart home devices are becoming empathic, attempting to draw out our affective participation and elicit our emotional expression. In these encounters with the medial and the technical, the emotional is remade. Combining a close analysis of contemporary technologies such as Affectiva, Facebook, and Alexa with critical media theory, *Logic of Feeling: Technology's Quest to Capitalize Emotion* examines how the quest to operationalize this inner life begins to reconfigure feeling itself.

This book contributes to the developing dialogue between cognitive science and social sciences. It focuses on a central issue in both fields, i.e. the nature and the limitations of the rationality of beliefs and action. The development of cognitive science is one of the most important and fascinating intellectual advances of recent decades, and social scientists are paying increasing attention to the findings of this new branch of science that forces us to consider many classical issues related to epistemology and philosophy of action in a new light. Analysis of the concept of rationality is a leitmotiv in the history of the social sciences and has involved endless disputes. Since it is difficult to give a precise definition of this concept, and there is a lack of agreement about its meaning, it is possible to say that there is a 'mystery of rationality'. What is it to be rational? Is rationality merely instrumental or does it also involve the endorsement of values, i.e. the choice of goals? Should we consider rationality to be a normative principle or a descriptive one? Can rationality be only Cartesian or can it also be argumentative? Is rationality a conscious skill or a partly tacit one? This book, which has been written by an outstanding collection of authors, including both philosophers and social scientists, tries to make a useful contribution to the debates on these problems and shed some light on the mystery of rationality. The target audience primarily comprises researchers and experts in the field.

"The Corona crisis and the Need for a Great Reset" is a guide for anyone who wants to understand how COVID-19 disrupted our social and economic systems, and what changes will be needed to create a more inclusive, resilient and sustainable world going forward. Thierry Malleret, founder of the Monthly Barometer, and Klaus Schwab, founder and executive Chairman of the World Economic Forum, explore what the root causes of these crisis were, and why they lead to a need for a Great Reset. There is a worrying, yet hopeful analysis. COVID-19 has created a great disruptive reset of our global social, economic, and political systems. But the power of human beings lies in being foresighted and having the ingenuity, at least to a certain extent, to take their destiny into their hands and to plan for a better future. This is the purpose of this book: to shake up and to show the deficiencies which were manifest in our global system, even before COVID broke out.
