*Integrating Marketing, Manufacturing and Physical Distribution* Springer Nature

As competition between value chains on globalized markets is constantly getting fiercer, there is a growing trend to

achieve closer collaboration and integration within these value chains and increasingly more complex supply networks. Additionally, in the wake of the thrilling possibilities of using information technology and its potential in boosting the performance of supply chains, researchers are increasingly looking for technology-enabled solutions for a better supply chain performance management. This volume, edited by Thorsten Blecker, Wolfgang Kersten and Christian Ringle, provides valuable insights into: - Maritime Logistics - Challenges and Opportunities - Leveraging Logistics Processes for Supply Chain Performance Management - Innovative Technology Solutions in Supply Chains - Knowledge Management in Logistics. This volume appeals to researchers and practitioners alike, who are interested in current contributions by international authors, providing theoretical, empirical and case-study oriented background and information on their research work.

Business practices are constantly evolving in order to meet growing customer demands. Evaluating the role of logistics and supply chain management skills or applications is necessary for the success of any organization or business. As market competition becomes more aggressive, it is crucial to evaluate ways in which a business can maintain a strategic edge over competitors. Supply Chain and Logistics Management: Concepts, Methodologies, Tools, and Applications is a vital reference source that centers on the effective management of risk factors and the implementation of the latest supply management strategies. It also explores the field of digital supply chain optimization and business transformation. Highlighting a range of topics such as inventory management, competitive advantage, and transport management, this multi-volume book is ideally designed for business managers, supply chain managers, business professionals, academicians, researchers, and upper-level students in the field of supply chain

management, operations management, logistics, and operations research.

It is very rightly said that if we teach today as we taught yesterday, then we rob our children of tomorrow. With this vision, CISCE has yet again updated and released its curriculum for the upcoming Academic Year. With all the refreshing changes and updates, the way ahead looks exciting for students and teachers alike! We at Oswaal Books, are also extremely upbeat about the recent changes. We have made every possible effort to incorporate all these changes in our books for the coming Academic Year. Questions incorporated in this book follow the latest syllabus, pattern and marking guidelines of the Council to guide the candidates to answer with

precision. This will help students to get familiar with the examination techniques. These Question banks are available for all important subjects like Maths, English, Hindi, Physics, Chemistry, Biology, History & Civics, Geography, Commercial Studies, Commercial Applications, Economic applications & Computer Applications & Economics. We at Oswaal Books never try to teach our readers. We on the other hand, provide them the conditions in which they can learn and train their mind to think! After all Education is what remains after one has forgotten what one learned in school. Some of the key benefits of studying from Oswaal Solved Papers are: • Strictly based on the latest CISCE Curriculum issued for Academic Year 2020-2021 • Previous Years' Board Questions for in depth study • Handwritten Toppers' Answers • Answering Tips and Examiner's Comments • Answers strictly as per the ICSE Marking Scheme • All Typology of Questions included for exam-oriented study • Revision Notes for comprehensive study • 'Mind Maps' in each chapter for making learning simple. Suggested videos at the end of each chapter for a Digital Learning Experience

**IMPORTANT FEATURES OF THE BOOK:** Self-Study Mode ICSE Chapter wise/Topic wise 10 years' Solved papers ICSE Previous 10 years' Examination Questions to facilitate focused study Exam Preparatory Material Latest Solved paper with Handwritten Topper's Answers Answers from ICSE Marking Scheme -2018 with detailed explanations as per the word limit for perfection in answering final exam questions Board Examiner comments and answering tips for clearer thinking. Suggestions for Students to score full marks in Exams Topics and concepts found difficult by students All-in -one Chapter wise & Topic wise introduction to enable quick revision Mind Maps for improved learning

**WHAT THIS BOOK HAS FOR YOU:** Latest ICSE Curriculum Strictly based on the latest CISCE curriculum and examination specifications for Academic Year 2020-2021, for class 10 Latest Typology OF Questions Latest typology of questions are included as per the latest design of the question paper issued by CISCE Hybrid Learning Suggested videos for digital learning

About Oswaal Books: We feel extremely happy to announce that Oswaal Books has been awarded as 'The Most Promising Brand 2019' by The Economic Times. This has been possible only because of your trust and love for us. Oswaal Books strongly believes in Making Learning Simple. To ensure student-friendly, yet highly exam-oriented content, we take due care in developing our Panel of Experts. Accomplished teachers with 100+ years of combined experience, Subject Matter Experts with unmatched subject knowledge, dynamic educationists, professionals with a keen interest in education and topper students from the length and breadth of the country, together form the coveted Oswaal Panel of Experts. It is with their expertise, guidance and a keen eye for details that the content in each offering meets the need of the students. No wonder, Oswaal Books holds an enviable place in every student's heart!

Urban Consolidation Centre (UCC) is a city logistics initiative

that has the potential to increase the efficiency of urban freight delivery systems while reducing negative environmental and social effects caused by freight vehicles. One important issue that have hindered longevity of this initiative is its viability, both the financial viability and acceptance from affected stakeholders (also called UCC customers). The UCC customers in focus in this thesis are receivers of goods and municipalities. To satisfy both types of stakeholders, their requests and, in particular, the benefits they can gain from using UCCs need to be studied. The types of benefits to be given priority differ between the stakeholders, where municipalities strive towards more societal benefits, and the main goals of receivers are an increase in efficiency and financial sustainability. In response, the purpose of this thesis is to deepen the understanding of benefits for customers of UCCs, with a particular focus on customer needs and benefits that UCCs can provide. This thesis consists of five appended papers, each of which uses a different methodology. The methodologies applied in the papers include a multiple interview study of five UCCs, a surveybased interview study of retail stores, and a case study of an operating UCC. Regarding customer needs, this thesis takes the customer perspective, in order to identify needs that UCCs can meet. The results presented in this thesis also highlight the importance for UCCs to give priority to meeting customer needs that stem from some type of problem. Regarding benefits that UCCs can provide, the thesis suggests how different types of benefits can be distinguished. This can give guidance to UCC operators regarding which benefits should be given priority in communication with UCC customers. However, the results highlight that it is also important to understand the situation of the customer to be able to communicate the most relevant benefits that UCCs can provide. Furthermore, the results illustrate different improvement areas that can affect the benefits for UCC customers. These identified areas are: improved understanding by both UCCs and its customers of each other's operation, communication, developing a more holistic view for UCC customers, and developing new UCC services to match customer needs. The results provide a foundation for customer needs that UCCs can meet, and the benefits that UCCs can provide. This foundation can be important for UCC customers to gain a better understanding of what a UCC is and how it can affect their operation, something that this thesis contributes

towards. It can also assist initiators of UCCs to determine which customer needs they should focus on. Lastly, the results and contribution also address the potential role of municipalities, and it is argued that their role should change from a more supportive role to that of a paying UCC customer. All of these aspects can increase the probability that a UCC, when established becomes viable.

Supply Chain and Logistics Management: Concepts, Methodologies, Tools, and Applications Oswaal Books and Learning Private Limited

Healthcare improvements is constantly relevant and an important topic. Healthcare is frequently being called upon to be more cost-efficient and still fulfil demands regarding waiting times, quality and availability. Experience from structural changes in other contexts gives reason to be positive about the potential for logistics improvements in the healthcare sector as well. From a logistics perspective patients pass different care functions, units, organisations and health facilities. It is assumed that logistics management knowledge applied in healthcare can lead to lower costs, shorter waiting times, better patient service, shorter treatment times and increased capacity. This dissertation therefore presents an exploration of how logistics management theories can be operationalised in a healthcare context to understand care chain effectiveness. Theoretically, the operationalisation is done by systems theory creating compatibility between logistics management theories and the healthcare context. As a first step, features for a logistics system forms features for achieving care chain effectiveness. High care chain effectiveness is thus a desired condition and the care delivery system is the tool to achieve it. As the final step in the operationalisation the features for care chain effectiveness are in turn used to analyse today's practices. Empirically, the research is based on qualitative data from a single case study with multiple units of analysis. It includes four care units at one of Sweden's university hospitals, where the data is gathered through interviews, insight into management systems and document analysis. One of the main results is the 21 areas identified for analysing today's practices by means of features for care chain effectiveness. Another main result is the four important concepts revealed through the operationalisation: Lead time - the episode of care from order to delivery as the amount of time for patient cases between first contact with healthcare and the last. Patient order fulfilment - fulfilment of patients' needs, broken down into several smaller steps performed over time within different care units in one or several organisations, consisting of five sub-processes - order handling, diagnosis, treatment, follow-up, and discharge. True demand – patients' needs that is to be met and thus sets what care to deliver, i.e. the production plan and the subordinate resource plan. System boundaries - defines which care units to include when focusing on the care delivery system's performance as a whole and should be more important than the performance and productivity of each individual care unit. A number of direct suggestions for care chain improvement can also be found in the concluding remarks, for example that objectives linked to economic influx or penalty narrow the system and that lead time data on an aggregated level is needed to cover episodes of care. The theoretical contribution of the dissertation is to the field of logistics management through the methodological development of using these theories in a new context. The managerial contribution is to healthcare managers through providing opportunities to improve care

chains primarily by means of a greater understanding of care delivery systems.
