It is widely accepted that technology is one of the forces driving economic growth. Although more and more new technologies have emerged, various evidence shows that their performances were not as high as expected. In both academia and practice, there are still many questions about what technologies to adopt and how to manage these technologies. The 15 articles in this book aim to look into these questions. There are quite many features in this book. Firstly, the articles are from both developed countries and developing countries in Asia, Africa and South and Middle America. Secondly, the articles cover a wide range of industries including telecommunication, sanitation, healthcare, entertainment, education, manufacturing, and financial. Thirdly, the analytical approaches are multi-disciplinary, ranging from mathematical, economic, analytical, empirical and strategic. Finally, the articles study both public and private organizations, including the service industry, manufacturing industry, and governmental organizations. Given its wide coverage and

multi-disciplines, the book may be useful for both academic research and practical management.

Designed for the pilot of piston-engine aircraft who is preparing for turbine ground school, the transitioning military pilot studying for that first corporate or airline interview, or even the old pro brushing up on turbine aircraft operations, this manual covers all the basics, clearly explaining the differences between turbine aircraft and their piston-engine counterparts. It addresses high-speed aerodynamics, coordinating multipilot crews, wake turbulence, and navigating in high-altitude weather. The book is like an operations manual for these complex aircraft, detailing pilot operations that include preflight, normal, emergency, IFR, and fueling procedures. Readers will be introduced to flight dispatch; state-of-the-art cockpit instrumentation, including the flight management system (FMS) and the head-up guidance system (HGS or HUD); and the operating principles of hazard avoidance systems, including weather radar, lightning detectors, and the ground proximity warning system (GPWS). Updated to reflect the newest Federal Aviation Administration regulations and procedures, this new edition also includes

a glossary of airline and corporate aviation terminology, handy turbine pilot rules of thumb, and a comprehensive turbine aircraft "Spotter's Guide."

Master the Production of Virtual Events and Improve Engagement Have you ever found yourself confidently delivering content for a virtual training session, webinar, or online meeting only to have a participant drop off? Or, have you bravely launched breakout sessions but found that participants got lost on where to go? These scenarios illustrate the convergence of virtual session facilitation and production. While attention is most often paid to the facilitation of virtual sessions, significantly less is devoted to producing them. *Producing Virtual Training, Meetings, and Webinars* rectifies this gap. In this book, Kassy LaBorie, go-to training expert and co-author of *Interact and Engage! 50 Activities for Virtual Training, Meeting, and Webinars*, guides you through the production knowledge and skills a trainer needs to master the production of virtual events while delivering engaging training, productive meetings, and captivating webinars—from how to

prepare the technology and content beforehand to how to run everything smoothly. Using examples from and discussing differences among common virtual conferencing platforms such as Adobe Connect, Blackboard, Zoom, Webex, GoTo suite, and Microsoft Teams, LaBorie offers a plan of action for conquering just about any platform and troubleshooting potential problems. This book thoroughly examines typical platform features (audio, webcam, chat, screen share), advanced interaction methods (polling, breakouts, Q&A), and administration and logistics elements (logins, session scheduling, reports). With production in mind, you'll also learn how to:

- Design session materials.
- Prepare attendees to participate before and during the session.
- Build successful virtual working relationships with presenters.

Through stories, templates, checklists, and examples, LaBorie shares about her 20-plus years of engaging participants successfully in thousands of virtual events and gets you up to speed in no time.
