### Long Eared Owl Facts | Asio Otus - The RSPB

The long-eared owl is a medium-sized owl, smaller in size than a woodpigeon. It often looks long and thin, with head feathers (known as ear tufts, even though they are not ears) which it raises when alarmed. It is buff-brown with darker brown streaks and deep orange eyes. It breeds thinly across the UK with fewer birds in the south-west and Wales. An Introduction to the Long-eared Owl (*Asio otus*) by Wild Owl ~~Long-eared owl (Asio otus) filmed up close. Long-eared owl (*Asio otus*) Wise and regal, with an imposing stare and elusive nature. Our most nocturnal owl, with a penchant for recycling other bird 's old nests. It lives in dense woodland and is a skilful hunter.

### Long-eared Owl | BTO - British Trust for Ornithology

Introduction. The Long-eared Owl is associated with coniferous woodland and tall scrubby habitats during the breeding season, favouring sites where dense nesting cover is located close to open areas that are used for hunting. Although widely distributed across Britain and Ireland, the Long-eared Owl remains a scarce breeding species and one that is easy to overlook. Short-eared and Long-eared Owls photo ID guide - BirdGuides

Medium-sized, rather slender owl with orange face patches and long "ear" tufts. Strictly nocturnal. Found in areas with a mix of dense cover for roosting, such as brushy thickets or conifer groves, and open spaces for hunting. Generally rare and seldom-seen, but can gather in communal winter roosts with dozens of individuals (if you're lucky enough to find a roost, do not disturb the birds).

John Aitchison presents the long-eared owl. The low moaning hoot of a long-eared owl filters through the blackness of a pine wood. Long-eared owls are nocturnal and one of our most elusive breeding...
