An answer to the charge of the lord bishop of Salisbury at his visitation in May 1867, so far as relates to the holy eucharist
Taylor & Francis

The 'Longman Science 11-14' series aims to put science into context both historically and in the modern world as well as reinforcing and consolidating learning through questions, summaries and investigation ideas.

A Taxonomy for Learning, Teaching, and Assessing Prentice Hall

One of a series of books designed for middle to higher ability students following the revised GCSE Double and Triple Award specifications. Exam-style questions and practice questions aim to facilitate progression from GCSE to AS/S level.

Longman Science Chemistry 10 CRC Press

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. The book that defined the liberal arts chemistry course, Chemistry for Changing Times remains the most visually appealing and readable introduction on the subject. The Thirteenth Edition increases its focus on student engagement – with revised “Have You Ever Wondered?” questions, new Learning Objectives in each chapter linked to end of chapter problems, and new Green Chemistry content, closely integrated with the text. Abundant applications and examples fill each chapter, and material is updated throughout to mirror the latest scientific developments in a fast-changing world. Compelling chapter opening photos, a focus on Green Chemistry, and the “It DOES Matter” features highlight current events and enable students to relate to the book more readily. This package contains: Chemistry for Changing Times, Thirteenth Edition

Of Mice and Men Longman

This revision of Bloom's taxonomy is designed to help teachers understand and implement standards-based curriculums. Cognitive psychologists, curriculum specialists, teacher educators, and researchers have developed a two-dimensional framework, focusing on knowledge and cognitive processes. In combination, these two define what students are expected to learn in school. It explores curriculums from three unique perspectives-cognitive psychologists (learning emphasis), curriculum specialists and teacher educators (C & I emphasis), and measurement and assessment experts (assessment emphasis). This revisited framework allows you to connect learning in all areas of curriculum. Educators, or others interested in educational psychology or educational methods for grades K-12.

Experience Psychology BenBella Books

The fourth edition of this well-known text continues the mission of its predecessors "to help teachers link creativity research and theory to the everyday activities of classroom teaching. Part I (chs 1-5) includes information on models and theories of creativity, characteristics of creative people, and talent development. Part II (chapters 6-10) includes strategies explicitly designed to teach creative thinking, to weave creative thinking into content area instruction, and to organize basic classroom activities (grouping, lesson planning, assessment, motivation and classroom organization) in ways that support students' creativity. Changes in this Edition: Improved Organization -- This edition has been reorganized from 8 to 10 chapters allowing the presentation of theoretical material in clearer, more manageable chunks. New Material -- In addition to general updating, there are more examples involving middle and secondary school teaching, more examples linking creativity to technology, new information on the misdiagnosis of creative students as ADHD, and more material on cross-cultural concepts of creativity, collaborative creativity, and linking creativity to state standards. Pedagogy & Design -- Chapter-opening vignettes, within-chapter reflection questions and activities, sample lesson ideas from real teachers, and end-of-chapter journaling activities help readers adapt content to their own teaching situations. Also, a larger trim makes the layout more open and appealing and a single end-of-book reference section makes referencing easier. Targeted specifically to educators (but useful to others), this book is suitable for any course that deals wholly or partly with creativity in teaching, teaching the gifted and talented, or teaching thinking and problem solving. Such courses are variously found in departments of special education, early childhood education, curriculum and instruction, or educational psychology.

Longman Biology 11-14 (2009 Edition) U.S. Government Printing Office

The Sourcebook for Teaching Science is a unique, comprehensive resource designed to give middle and high school science teachers a wealth of information that will enhance any science curriculum. Filled with innovative tools, dynamic activities, and practical lesson plans that are grounded in theory, research, and national standards, the book offers both new and experienced science teachers powerful strategies and original ideas that will enhance the teaching of physics, chemistry, biology, and the earth and space sciences.

The 'Longman Science 11-14' series aims to put science into context both historically and in the modern world as well as reinforcing and consolidating learning through questions, summaries and investigation ideas.

English as a Global Language Prentice Hall

Do you want your students to just take psychology or to experience psychology? Experience Psychology is a complete learning system that empowers students to personally, critically, and actively experience the impact of psychology in everyday life. Experience Psychology is about, well, experience—our own behaviors; our relationships at home and in our communities, in school and at work; and our interactions in different learning environments. Grounded in meaningful real-world contexts, Experience Psychology's contemporary examples, personalized author notes, and applied exercises speak directly to students, allowing them to engage with psychology and to learn verbally, visually, and experientially—by reading, seeing,

and doing. With the Experience Psychology learning system, students do not just “take” psychology but actively experience it. Experience a Personalized Approach How many students think they know everything about introductory psychology but struggle on the first exam? LearnSmart, McGraw-Hill's adaptive learning system, pinpoints students' metacognitive abilities and limitations, identifying what they know—and more importantly, what they don't know. Using Bloom's Taxonomy and a highly sophisticated “smart” algorithm, LearnSmart creates a personalized, customized study plan that's unique to each individual student's demonstrated needs. With virtually no administrative overhead, instructors using LearnSmart are reporting an increase in student performance by a letter-grade or more. Throughout Experience Psychology, students find a wealth of personal pedagogical “asides” directly from Laura King to guide their understanding and stimulate their interest as they read. Some of these helpful notes highlight crucial terms and concepts; others prompt students to think critically about the complexities of the issues; other notes encourage students to apply what they have learned to their prior reading or to a new situation. These mini-conversations between author and students help develop analytical skills for students to carry and apply well beyond their course. Experience an Emphasis on Critical Thinking Experience Psychology stimulates critical reflection and analysis. Challenge Your Thinking sidebar features involve students in debates relevant to findings from contemporary psychological research. Thought-provoking questions encourage examination of the evidence on both sides of a debate or issue. Also oriented toward critical thought are the text's Intersection selections. Showcasing studies in different areas of psychological research that are being conducted on the same topic, the Intersections shed light on the links between, and the reciprocal influences of, this exciting work, and they raise provocative questions for student reflection and class discussion. Experience an Emphasis on Active Engagement With the new Experience It! feature, students can use their mobile devices to practice and master key concepts wherever and whenever they choose. By snapping easily located QR codes, students gain access to videos, Concept Clips, and related news articles, for a highly portable, rich, and immersive experience that powerfully reinforces the chapter reading. Through Do It!, a series of brief, reoccurring sidebar activities linked to the text reading, students get an opportunity to test their assumptions and learn through hands-on exploration and discovery. Reinforcing that the science of psychology requires active participation, Do It! selections include, for example, an exercise on conducting an informal survey to observe and classify behaviors in a public setting, as well as an activity guiding students on how to research a “happiness gene.” Such exercises provide students with a vibrant and involving experience that gets them thinking as psychologists do. Experience Psychology helps students to perform to their maximum potential in and out of the classroom, fully engaging them in the content and experiences that comprise the world's most popular undergraduate major.

The Oration of Demosthenes in Answer to Æschines Upon the Crown. Translated Into English by William Brandt ... With Notes Cambridge University Press

Tells a story about the strange relationship of two migrant workers who are able to realize their dreams of an easy life until one of them succumbs to his weakness for soft, helpless creatures and strangles a farmer's wife.

Laboratory and activity disc includes the manual in both student and teacher editions and a lab materials list.

Market Leader Pearson Longman

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

The Iliad Lulu.com

The Market Leader specialist titles extends the scope of the Market Leader series and allows teachers to focus on the reading skills and vocabulary development required for specific areas of business.
