In the choir of the Basilica of San Lorenzo, a truly sacred temple of the Medici dynasty, Pontormo painted a grandiose cycle of frescos between 1545 and 1556, which were then unfortunately destroyed in the mid-18th century. Far earlier, Giorgio Vasari issued a severe judgment on them that lasted into the modern day. His was a dismissal motivated formally by artistic reasons, but it

concealed other, more insidious, ideological and religious motivations. On the basis of drawings, copies, paintings and literary sources, this study reconstructs the design and arrangement of the frescoes, revealing them to have been inspired by a contemporary heterodox text, one that was included in the Index in 1549. From a dense web of Florentine religious, cultural and political life and its shifts in the middle decades of the century, the political motivations underlying Vasari's commitment to transforming the doctrinal heresy from which those grandiose paintings had drawn inspiration into an artistic heresy emerge. It was a commitment that, after the conclusion of the Council of Trent, risked reflecting upon the new Counter-Reformist structure of Medici power.

In 1524 Lorenzo Lotto (Venice, 1480 - Loreto, 1556), one of the greatest Italian artists of the Renaissance, painted the walls of a small oratory. The building, owned by Battista Suardi, the nobleman who had commissioned the frescoes, was situated in the garden of his country house at Trescore Balneario, a few miles from Bergamo. The encounter between the Venetian painter and his refined patron, in a year marked by obscure signs in the heavens and heretical stirrings, produced one of the century's most unusual cycles of paintings, not only from the artistic viewpoint but also from that of the complexity of its doctrinal underpinnings. The paintings of the great Venetian artist are thoroughly analyzed on the

visual plane as well, by means of a lavish set of illustrations. A series of explanatory diagrams and close-up photographs, on a one-to-one scale, permit the reader to appreciate the high formal qualities of this cycle of paintings and to get to the heart of its beauty and meaning. In this volume the author, Francesca Cortesi Bosco, traces the dense web of religious and cultural motivations that lie behind Lotto's masterpiece, presenting a fascinating picture of the artistic life of the time and opening up completely new prospects for its interpretation. Approximate Commutative Algebra is an emerging field of research which endeavours to bridge the gap between traditional exact Computational Commutative Algebra and approximate numerical computation. The last 50 years have seen enormous progress in the realm of exact Computational Commutative Algebra, and given the importance of polynomials in scientific modelling, it is very natural to want to extend these ideas to handle approximate, empirical data deriving from physical measurements of phenomena in the real world. In this volume nine contributions from established researchers describe various approaches to tackling a variety of problems arising in Approximate Commutative Algebra.

The Political Economy of Resources and Development offers a unique and multidisciplinary perspective on how the commodity boom of the mid-2000s reshaped the model of development throughout Latin America and elsewhere in the developing world. Governments increased taxes and royalties on the resource sector, the nationalization of foreign firms returned to the mainstream economic policy agenda, and public spending on social and developmental goals surged. These trends, often described as resource nationalism, have developed into a strategy for economic development, generated a re-imagining of the state and its institutional possibilities, and created a new but very significant political risk for extractive enterprises. However, these innovations, which constitute the most dramatic change in development policy in Latin America since the advent of neoliberalism, have so far received little attention from either academic or policy-

oriented publications. This book explores the reasons behind these policies, and their effects on states, firms, and development trajectories. This text brings together renowned thematic experts to examine the political-economic causes of resource nationalism, as well as its manifestation in six Latin American countries. The causal variables considered by the contributors to this collection include a range of political-economic determinants of policy including commodity prices; the influence of ideology and national politics; ideas about industrial policy; relations between host governments and investors; and how countries respond to opportunities provided by regional initiatives and the new geography of the global economy. This volume is essential reading in development economics, political economy, and Latin American studies, as well as for those who want to understand what economic development means after neoliberalism.

Susan Sarandon's memorable performances have made her an American icon. Passionate and outspoken, she's often controversial. Why did Sarandon choose acting as a career? What is her acting philosophy? How does she select roles?

What motivates her to promote social and political causes? Why do some people object to this? How do critics rate her work and her movies? Betty Jo Tucker answers these questions and more in an analysis of Sarandon's achievements from a film critic's perspective. Tucker's book also includes an annotated filmography of Sarandon's movies and selected reviews of her key films.

Does market liberalization promote democracy? The accepted answer from scholars, pundits, and politicians alike has been yes. However, the contributors to this innovative study of market reforms and political change in Mexico and the People's Republic of China argue that this easy equation is not only empirically uncertain but methodologically flawed. Using comparative contextual analysis, the contributors carefully identify the elective affinities between these two very different polities to reveal key variables that determine how markets will affect democracy, particularly law as the 'rudder of democracy' and the role of political culture in civil society.
