No-Man's Lands Rough Guides UK

This book is an analysis of the most significant elements that compose the "Bond formula," such as names, binary oppositions and narrative patterns. It tackles Ian Fleming's novels as well as the 22 films of the Eon

Productions series and follows the evolution of certain determining features (paradigms) from the text to the screen, to determine their function within the narration. This study reveals how the James Bond universe goes well beyond mere spy adventures to become a genre in itself as well as, now, a standard cultural reference. The book also shows that the underlying ideology of the James Bond narration is not as conservative as it might appear, for it promotes ideals of the Enlightenment period such as secularity, pragmatism and the common good.

This is not a dictionary - and nor is it an encyclopedia. It is a reference and compendium of useful information about the converging worlds of computers, communications, telecommunications and broadcasting. You could refer to it as a guide for the Information Super Highway, but this would be pretentious. It aims to cover most of the more important terms and concepts in the developing discipline of Informatics - which, in my definition, includes the major converging technologies, and the associated social and

cultural issues. Unlike a dictionary, this handbook makes no attempt to be 'prescriptive' in its definitions. Many of the words we use today in computing and communications only vaguely reflect their originations. And with such rapid change, older terms are often taken, twisted, inverted, and mangled, to the point where any attempt by me to lay down laws of meaning, would be meaningless. The information here is 'descriptive' - I am concerned with usage only. This book therefore contains keywords and explanations which have been culled from the current literature - from technical magazines, newspapers, the Internet, forums, etc. This is the living language as it is being used today - not a historical artifact of 1950s computer science.
