Affective Health and Masculinities in South Africa explores how different masculinities modulate substance use, interpersonal violence, suicidality, and AIDS as well as recovery cross-culturally. With a focus on three male protagonists living in very distinct urban areas of Cape Town, this comparative ethnography shows that men ' s struggles to become invulnerable increase vulnerability. Through an analysis of masculinities as social assemblages, the study shows how affective health problems are tied to modern individualism rather than African ' tradition ' that has become a clich é in Eurocentric gender studies. Affective health is conceptualized as a balancing act between autonomy and connectivity that after colonialism and apartheid has become compromised through the imperative of self-reliance. This book provides a rare perspective on young men ' s vulnerability in everyday life that may affect the reader and spark discussion about how masculinities in relationships shape physical and psychological health. Moreover, it shows how men change in the face of distress in ways that may look different than global health and gender-transformative approaches envision. Thick

descriptions of actual events over the life course make the study accessible to both graduate and undergraduate students in the social sciences. Contributing to current debates on mental health and masculinity, this volume will be of interest to scholars from various disciplines including anthropology, gender studies, African studies, psychology, and global health.

When teenagers began hanging out at the mall in the early 1980s, the movies followed. Multiplex theaters offered teens a wide array of perspectives on the coming-of-age experience, as well as an escape into the alternative worlds of science fiction and horror. Youth films remained a popular and profitable genre through the 1990s, offering teens a place to reflect on their evolving identities from adolescence to adulthood while simultaneously shaping and maintaining those identities. Drawing examples from hundreds of popular and

lesser-known youth-themed films, Timothy Shary here offers a comprehensive examination of the representation of teenagers in American cinema in the 1980s and 1990s. He focuses on five subgenres—school, delinquency, horror, science, and romance/sexuality—to explore how they represent teens and their concerns, how these representations change over time, and how youth movies both mirror and shape societal expectations and fears about teen identities and roles. He concludes that while some teen films continue to exploit various notions of youth sexuality and violence, most teen films of the past generation have shown an increasing diversity of adolescent experiences and have been sympathetic to the particular

challenges that teens face.
